Administrative Core

Clifford Rosen MD

Gary Stein PhD

Maine Medical Center

The University of Vermont

UNIVERSITY OF SOUTHERN MAINE

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE OBJECTIVES & OPERATING PRINCIPLES

Aim 1. The Administrative Core oversees the infrastructure that provides a foundation to support, sustain and evolve clinical and translational research in Maine, New Hampshire, and Vermont.

Aim 2. Support a transparent organizational structure with uniform policies and procedures to guide and integrate overall NNE-CTR operations.

Aim 3. Respond strategically to performance evaluations to continually realign the NNE-CTR with its mission of enhancing infrastructure and capabilities to capture opportunities that improve the health of the region.

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Invested Year 1 Carry-forward funds ($1.25M) to expand research capacity and capabilities
  - Enhanced research infrastructure (genomics, imaging and proteomics/ lipidomics, computational infrastructure and software)
  - Boot Camp Translation Facilitator training for community engagement
  - Pilot Projects
    - Paul Han (MMC) and Robert Gramling (UVM): Northern New England Palliative Care Teleconsult Research Laboratory
    - Sanchit Maruti (UVM): Emergency Department-Initiated Buprenorphine Intervention for Opioid Use Disorder

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Interactions with other CTRs and CTSAs/CTSIs
  - Sally Hodder accepted invitation to chair the NNE-CTR EAC
  - NNE-CTR PIs joined the Dartmouth SYNERGY CTSI EAC
  - Cliff Rosen appointed to EAC for the Rhode Island Advance CTR
  - Cliff Rosen continued to Chair the Mayo Clinic CTSA EAC
  - Gary Stein participated in Nebraska and Delaware CTR annual meetings
  - Initiated discussions with regional CTSAs for collaborations on shared thematically-aligned objectives
    - Dartmouth Medical School (SYNERGY)
    - UMass Medical School
  - Investigated opportunities for CTR/CTSA and CTR/INBRE initiatives
  - Maine INBRE renewed for 5 years

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Quarterly NNE-CTR Core presentations of progress to NIGMS by videoconference for evaluation and recommendations
- Provided accessible videoconferences and outreach (seminars, conferences, professional development, pilot project progress presentations)
  - Developed a series of interactive web-based sessions focused on applications for recently acquired instrumentation for genomic analysis and cellular imaging

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Promoted mission of NNE-CTR widely at MMC, UVM and other venues
  - Explored opportunities for collaborative initiatives
  - NNE-CTR leadership elected to Dartmouth COOP governing board
  - Participated in Dartmouth COOP annual meeting
  - Investigated collaborative public health-focused research initiatives with Vermont Department of Health leadership
  - Expanded content of the NNE-CTR website, and transferred website maintenance to the UVM Larner College of Medicine Office of Medical Communication
    - Databases, warehouse

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Provided periodic updates and testimony to key thought leaders and lawmakers at VT Statehouse
- Participated in the Maine Alzheimer's Summit, a meeting to engage basic, translational, and clinical researchers, as well as those involved in clinical care and advocacy, in advancing research and funding for Alzheimer's and dementia research in Maine
- Professional Development – mentoring mentors and investigators
- Organized today's External Advisory Committee Retreat
    - Speakers aligned thematically with NNE-CTR initiatives:

      Mark Levine, Commissioner of VT Dept of Health

      Robert Croyle, Director, NCI Cancer Control & Population Sciences

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Attendance/participation at annual meetings of CTRs with complementary programs and upcoming NERIC meeting at Mt. Washington
- Reciprocal working visits and seminar presentations by Pilot awardees
- Round 3 Pilot Projects reviewed by the Scientific Review Committee. Six pilots will be funded, one with Year 2 funds, the others with Year 3 funds. The Year 2 pilot is awaiting approval from NIGMS. The five Year 3 pilots are obtaining regulatory approvals and will be sent shortly to the EAC for evaluation and approval.

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Cancer Working Group - collaborating on initiatives with states and advocacy groups
  - NNE Center for Rural Health & Cancer (shared initiatives: VT, ME, NH)
  - CDC Supplemental Funding (Survivorship Care Plan, Cancer treatment rehabilitation “Steps to Wellness”)
  - HPV Messaging Success & Disparities (NCI Grant R01)
  - Biden Foundation and State Cancer Coalitions
  - Expanded CRDEB support for rural health initiatives
  - Engagement in Women’s and Men’s Health & Cancer Programs
  - Leadership for regional initiatives to collaboratively address the challenges of cancer prevention, early detection, treatment and survivorship in rural norther New England (VT, NH, ME and western MA)

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Addiction Working Group
  - Administrative Supplement awarded September 2018
  - Legislative advocacy to secure state funding for e-cig education
  - Advocacy for successful tobacco control legislation (T21)
  - Support for development of HRSA Center for Excellence for Rural Communities
  - Engagement with city and state programs to address substance abuse
  - Meetings with the Mayor of Burlington and State legislators/staff to identify options and opportunities for addiction interventions

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

ADMINISTRATIVE CORE ACTIVITIES HIGHLIGHTS

- Round 3 Pilot Project Proposals:
  - New/Early Investigator 18
  - Rural focus 5
  - Addiction-related 9
  - Cancer 9
  - Cardiovascular 5

By institution:

- MMC 13
- UVM 9
- Joint MMC & UVM 5

- 5 pilot projects will be funded after July 1, 2019, using Year 3 CTR funding

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

EAC SUGGESTIONS (from June 2018 Retreat)

- Encourage collaborative (multi-site) Pilots
  - Several multi-site (ME, NH, VT) have been funded. We encourage multi-site submissions when we solicit new pilots.
- Collaborate with Dartmouth CTSA
  - NNE-CTR PIs joined the Dartmouth SYNERGY CTSI EAC
  - Collaborative HEAL Initiative grant submitted
- Develop training modules and studios
  - Developed interactive web-based sessions focused on applications for recently acquired instrumentation for genomic analysis and cellular imaging. Presentations on applications given several times per year by the Translational Technologies Core
- Prioritize community engagement and projects
  - Rural Health Core in both VT and ME are prioritizing community engagement. Boot Camp Translation Facilitator training next week
- Consider “charge-backs” for Core services (i.e., genomics)
  - Maine Translational Technologies Core charges user fees.

VDH's Efforts to Address the Challenges of Health and Health Care in a Rural State
Opportunities for Collaboration with NNE-CTR

Mark A. Levine, MD, Commissioner

VERMONT
DEPARTMENT OF HEALTH

June 7, 2019

Objectives

- Public and population health 101: a vision of health equity
- Priorities from the State Health Assessment and State Health Improvement Strategies
- Potential for ongoing collaboration with academic center-based programs:
  - Survivorship
  - Rurality
  - SUD
- Challenges in cancer prevention and early detection
  - Lung cancer
  - Our State Cancer Plan

Objectives

- Public and population health 101: a vision of health equity

  - Lung cancer
  - Our State Cancer Plan

2019-2023 State Health Improvement Plan

State Health Assessment and Plan

State Health Assessment =

What do we know about the health of Vermonters?

State Health Improvement Plan = Priorities for Vermont

What are we going to do about it?

What is the plan for all state partners, public and private, to improve health outcomes?

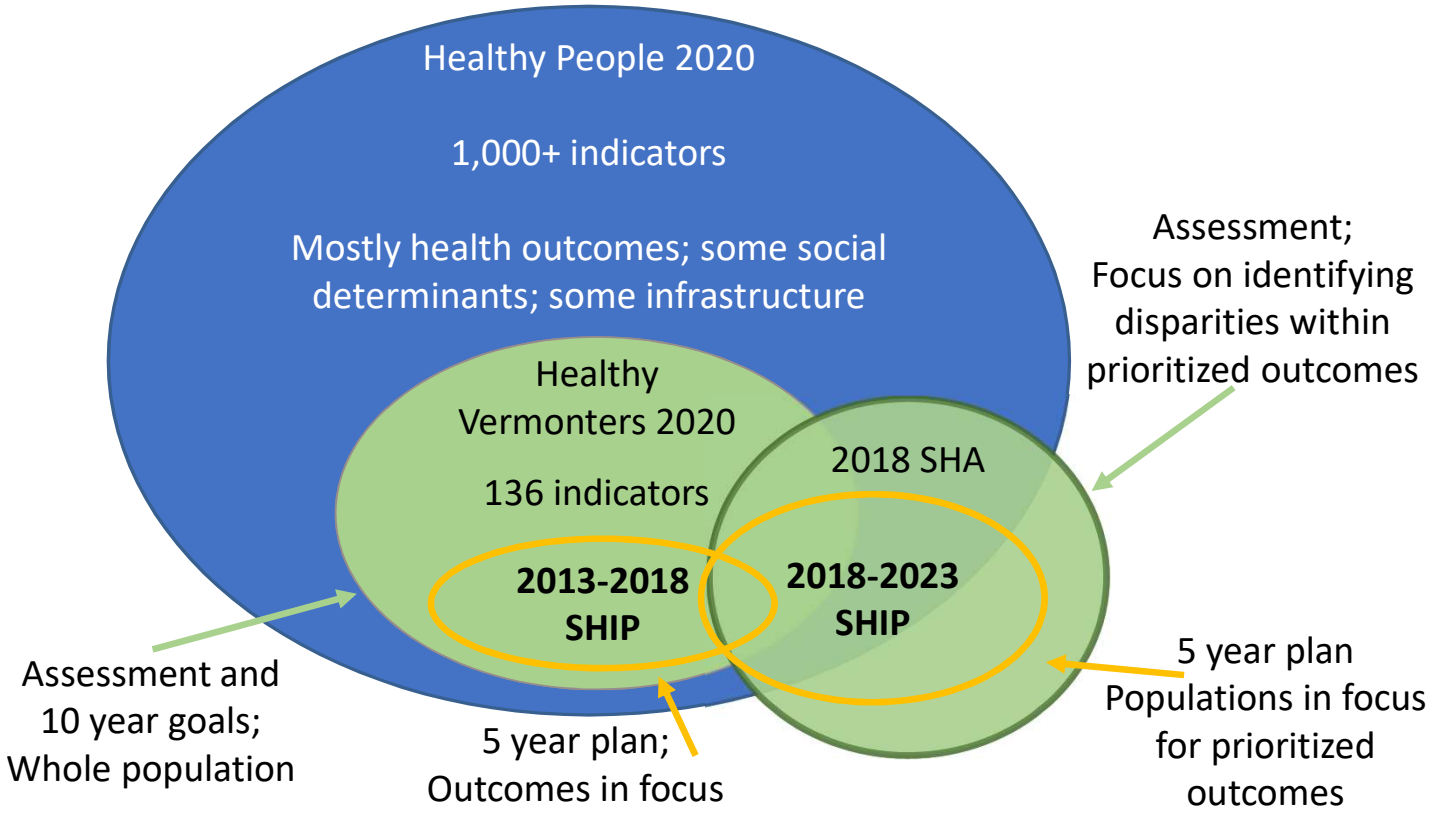
Which populations are most affected?

Disparities: Statistical differences in health that occur among populations defined by specific characteristics (e.g. age, sex) Could be from any cause.

Inequity: Differences in health outcomes that are avoidable, unfair, and shaped by condition of people's lives related to the distribution of money, power and resources.

Often associated with social categories of race, gender, ethnicity, social position, sexual orientation and disability.

SHAs and SHIPs

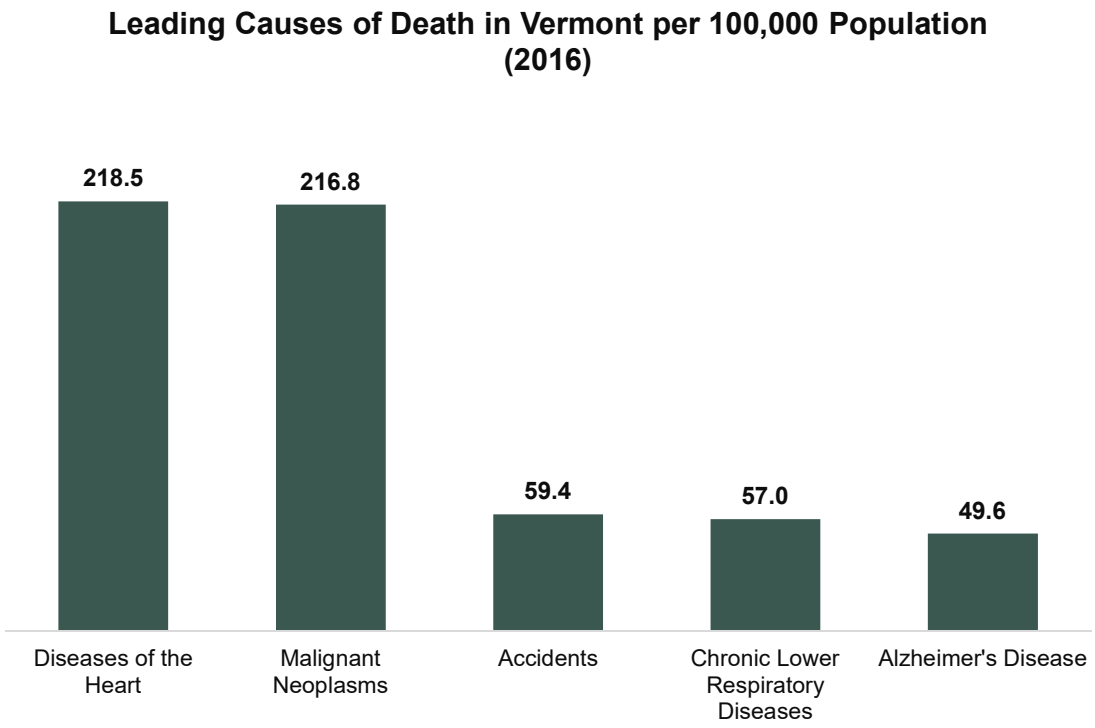


Health Equity

Health equity exists when all people have a fair and just opportunity to be healthy, especially those who have experienced socioeconomic disadvantage, historical injustice and other avoidable inequalities that are often associated with social categories of race, gender, ethnicity, social position, sexual orientation and disability.

What is Health Equity?

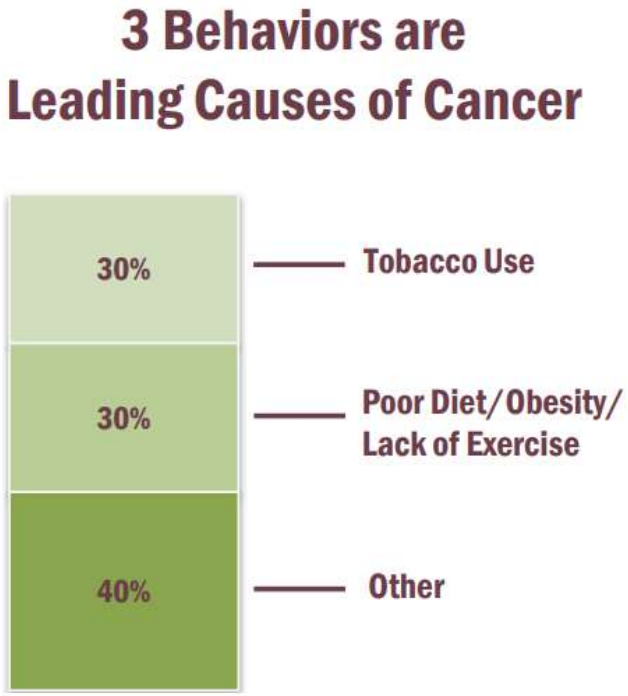
Leading Causes of Death in Vermont



Note: All rates shown are crude rates.

Data Source: VT Vital Statistics 2016

What Causes Cancer?



- Other causes of cancer include viruses, family history of cancer, reproductive factors, prescription drugs or medical procedures, and environmental pollution.

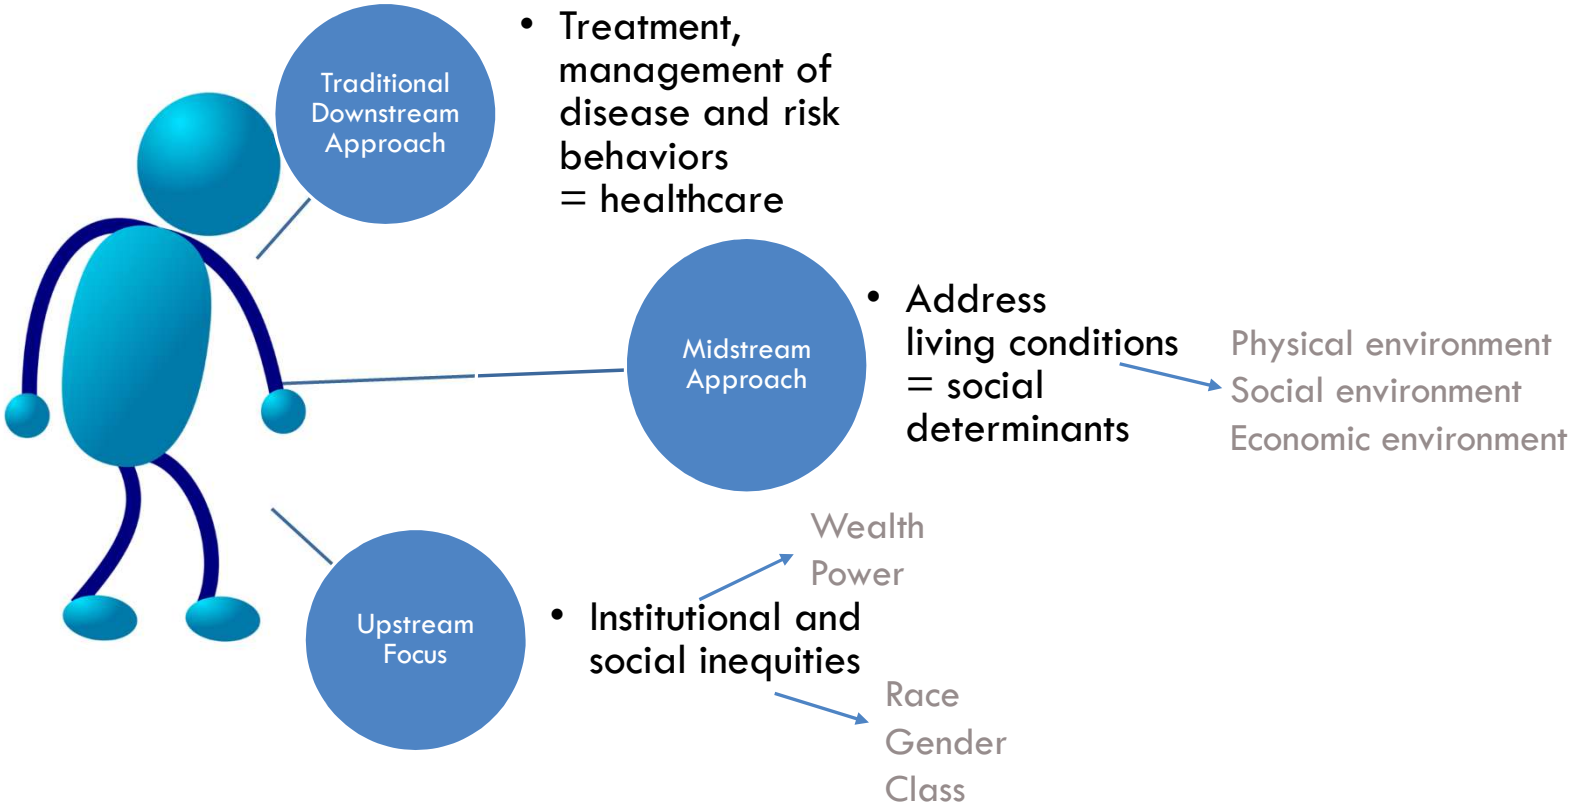
From the What to the

Why to the

How

Public Health Framework for Reducing Health Inequities



In five years, if we have successfully worked towards achieving health equity, what would we have accomplished?

Vision: All people in Vermont have a fair and just opportunity to be healthy and live in healthy communities

- Everyone feels respected, valued, included, and safe to pursue healthy and meaningful lives;
- All ages, all abilities, and all Vermonters have equitable access to the conditions that create health;
- Investments are focused on prevention and the conditions that create positive health outcomes; and
- Services are available, accessible, affordable, coordinated, culturally and linguistically appropriate and offered with cultural humility.

Core Values: Equity • Affordability • Access

Priorities from the State Health Assessment

Health Conditions/Outcomes

- Child Development *(chD)*
- Chronic Disease *(CD)*
- Mental Health *(MH)*
- Oral Health *(OH)*
- Substance Use Disorder *(SU)*

Social Conditions *(SDOH)*

- Housing
- Transportation
- Food
- Income/Economic Stability

http://www.healthvermont.gov/about/reports/state-health-assessment-2018

Each strategy is designed to improve one or more priority health and social conditions (color key below) –

State Health Improvement Strategies

Invest in policies and infrastructure that create healthy communities - page 6.

Implement policies and promote norms that encourage physical activity and healthy eating, and discourage tobacco, alcohol, drug use/misuse.

Use health care reform and regulatory levers to support access to food, housing, transportation.

Expand housing and weatherization programs.

Form partnerships and shared investments to expand transportation services.

Expand community water fluoridation.

Invest in programs that promote resilience, connection and belonging - page 8.

Expand access to home visiting programs.

Promote the *Strengthening Families* system.

Expand opportunities such as mentoring, peer support and after-school programs for youth.

Implement strong school health and wellness plans, policies and programs.

Create community supports for people in recovery.

Implement *Zero Suicide* in health care systems.

Expand access to integrated person-centered care - page 10.

Integrate oral health, mental health, substance use disorder prevention into primary care.

Create a universal system for developmental screening and referrals for children and families.

Implement SBINS* for health behaviors, housing, transportation, food and economic security.

Integrate oral health into health care practice and other settings (nursing homes, schools, etc.).

Promote practice improvements and professional development for early care and learning providers.

* Screening, Brief Intervention & Navigation to Services

Adopt organizational and institutional practices that advance equity - page 12.

Meaningful community engagement • Equitable programs, policies and budgets • Respectful care and services • Informed actions and decisions

KEY – Child Development · Chronic Disease Prevention · Mental Health · Oral Health · Substance Use Prevention · Housing, Transportation, Food & Economic Security

Expand access to integrated person-centered care - page 10.

Integrate oral health, mental health, substance use disorder prevention into primary care.

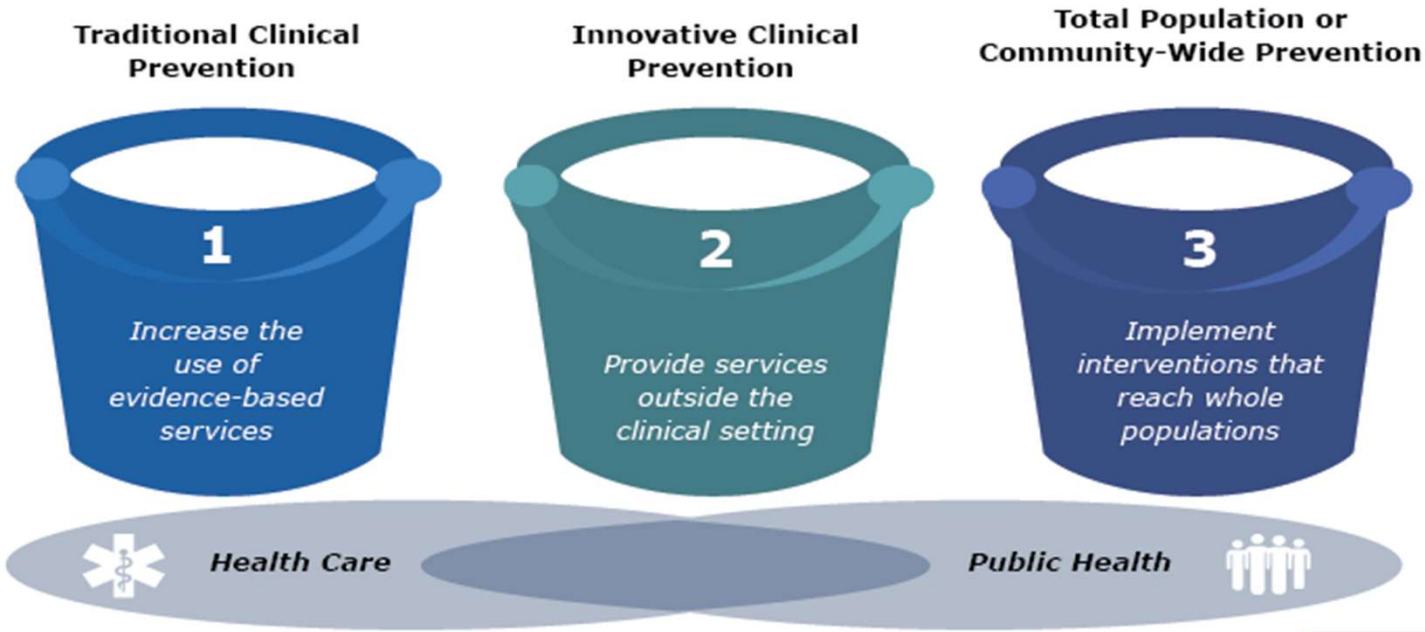
Create a universal system for developmental screening and referrals for children and families.

Implement SBINS* for health behaviors, housing, transportation, food and economic security.

Integrate oral health into health care practice and other settings (nursing homes, schools, etc.).

Promote practice improvements and professional development for early care and learning providers.

Framework for Strategies with Health Care Partners



To read more: http://journal.lww.com/jphmp/toc/publishahead

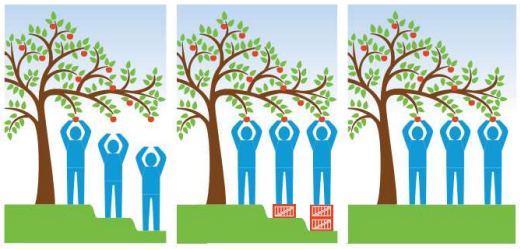
Objectives

- Public and population health 101: a vision of health equity
- Priorities from the State Health Assessment and State Health Improvement Strategies
- Potential for ongoing collaboration with academic center-based programs:
  - Survivorship
  - Rurality
  - SUD
- Challenges in cancer prevention and early detection
  - Lung cancer
  - Our State Cancer Plan

Disparities

Reduce cancer-related disparities in Vermont

- Disparities objectives across the Cancer Continuum
- Priority Populations:
  - Low-Income Vermonters (<250% FPL)
  - Cancer Survivors



Health equity exists when all people have a fair and just opportunity to be healthy – especially those who have experienced socioeconomic disadvantage, historical injustice, and other avoidable systemic inequalities that are often associated with social categories of race, gender, ethnicity, social position, sexual orientation, and disability.

Cancer Survivorship

- Approximately 8% or 39,000 adult Vermonters report having ever been diagnosed with cancer (BRFSS, 2016).
- Several layers of collaboration on work in Vermont related to cancer survivor physical and emotional health
- VTAAC Quality of Life workgroup coordinates, supports and promotes work of many partners addressing cancer survivorship
- Upcoming UVM Cancer Center – Department of Health collaboration CDC Survivorship Supplemental funds
  - Focus: Cancer survivor care and patient navigation

Rurality

- Differences in health equity in rural vs. urban settings.
- Rural communities are hard to define in largely rural states
- Department of Health Rural-Urban Workgroup
  - Looking to identify consistent definitions for use in data analysis across the Department.
  - Exploring use of Rural-Urban Commuting Area (RUCA) to define rurality.

Rurality

Access to Care in Vermont: Factors Linked with Time to Chemotherapy for Women with Breast Cancer

Purpose:

In the rural United States, there are multiple potential barriers to the timely initiation of chemotherapy. The goal of this study was to identify factors associated with delays in the time from initial diagnosis to first systemic therapy (TTC) among women with breast cancer in Vermont.

Methods:

Using data from the Vermont Cancer Registry, we explored TTC for 702 female Vermont residents diagnosed with stage I to III breast cancer between 2006 and 2010 who received adjuvant chemotherapy. Multivariable linear regression was used to evaluate the associations between TTC and patient, tumor, treatment, and geographic variables.

Results:

Mean TTC was 10.2 weeks. Longer drive time ($P < .001$), more invasive surgery ($P = .01$), and breast reconstruction ($P < .001$) were each associated with longer TTC. Each additional 15 minutes of drive time was associated with a 0.34-week (95% CI, 0.22 to 0.46 weeks) increase in TTC. Participants age younger than 65 years whose primary payer was Medicare (n = 27) had significantly longer average TTC, by 2.37 weeks ($P = .001$), compared with those with private or military insurance. There was also substantial variation in TTC across hospitals ($P < .001$).

Conclusion:

Most female patients with stage I to III breast cancer in Vermont are receiving adjuvant chemotherapy within the National Comprehensive Cancer Network–recommended timeframe; however, improvements remain needed for certain subgroups. Novel approaches for women with long drive times need to be developed and evaluated in the community. Variation in TTC by hospital, even after adjusting for patient, tumor, and treatment factors, also suggests opportunities for process improvement.

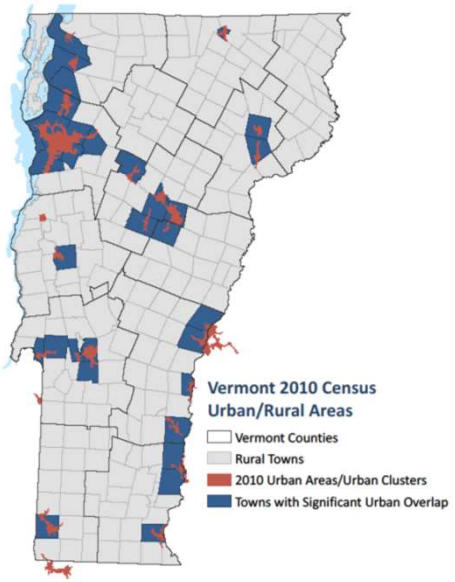

Table 2. Linear Regression Results for Models of TTC As Function of Various Patient, Tumor, Treatment, and Geographic Variables

Variable	Unadjusted Estimated ΔTTC (weeks)	Unadjusted 95% CI	Unadjusted P	Hospital Adjusted Estimated ΔTTC (weeks)	Hospital Adjusted 95% CI	Hospital Adjusted P	Multivariable Adjusted* Estimated ΔTTC (weeks)	Multivariable Adjusted* 95% CI	Multivariable Adjusted* P

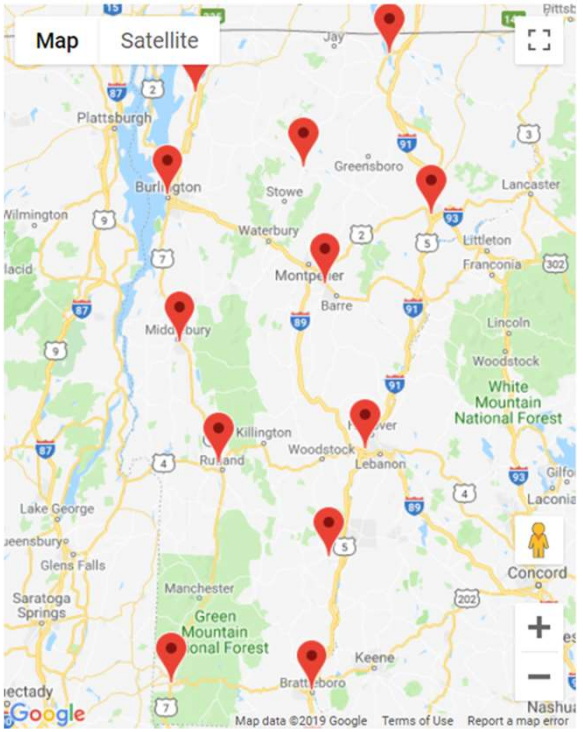
Local Health Offices – Chronic Disease

- All 12 Local Health Offices addressing chronic disease
- Chronic Disease Designees & other key staff
- Offices engage worksites, schools, providers, municipalities & faith communities to consider policy development and environmental changes that promote health and well being



Local Health Offices – Activities

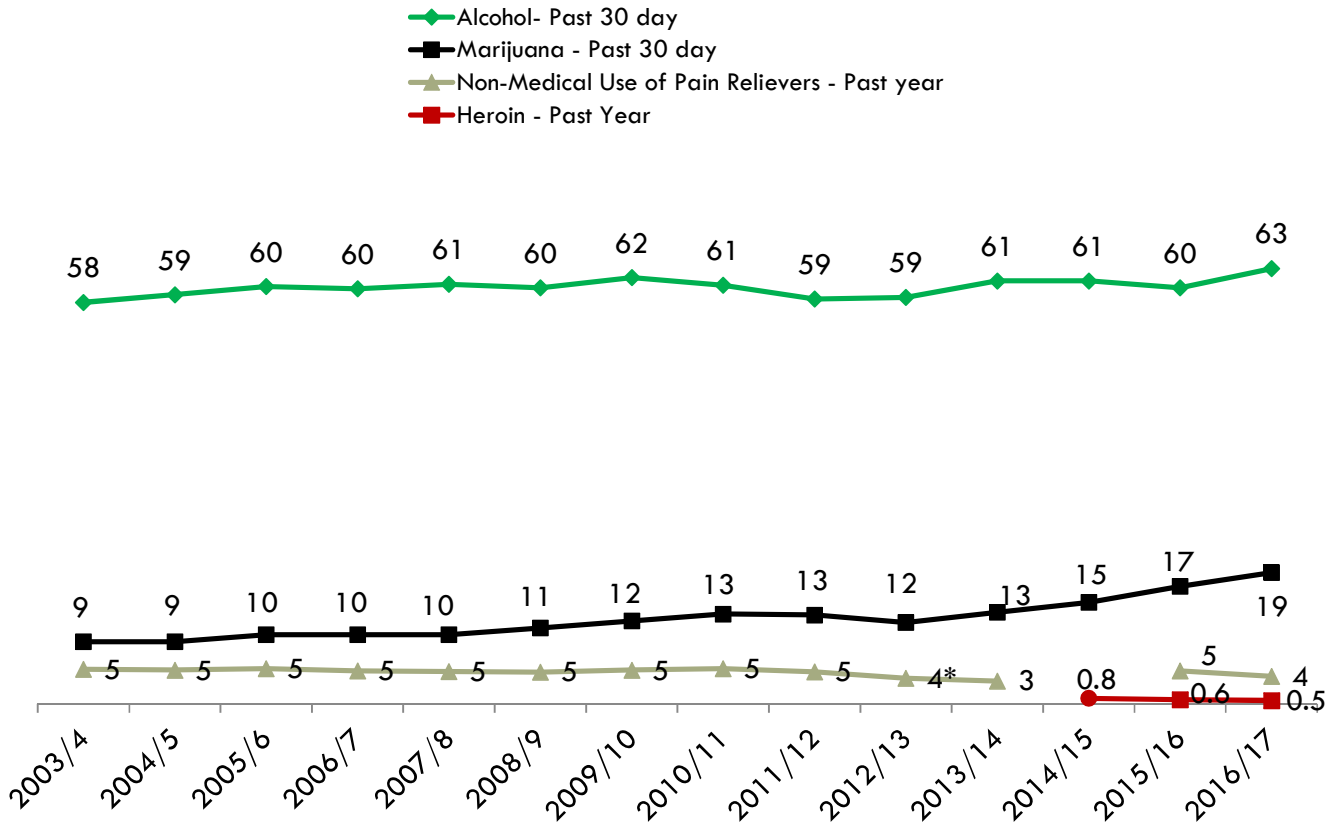
- Promotion of 3-4-50 in multiple sectors
- Healthy community design
- Tobacco Prevention – working with local coalitions
- Sun safety program local support
- HPV activities with providers & northwestern VT high school clinics
- Cancer screening QI activities with providers
- Many other community-based prevention activities!

Brattleboro OLH Dress in Blue Day for Colorectal Cancer Awareness

Objectives

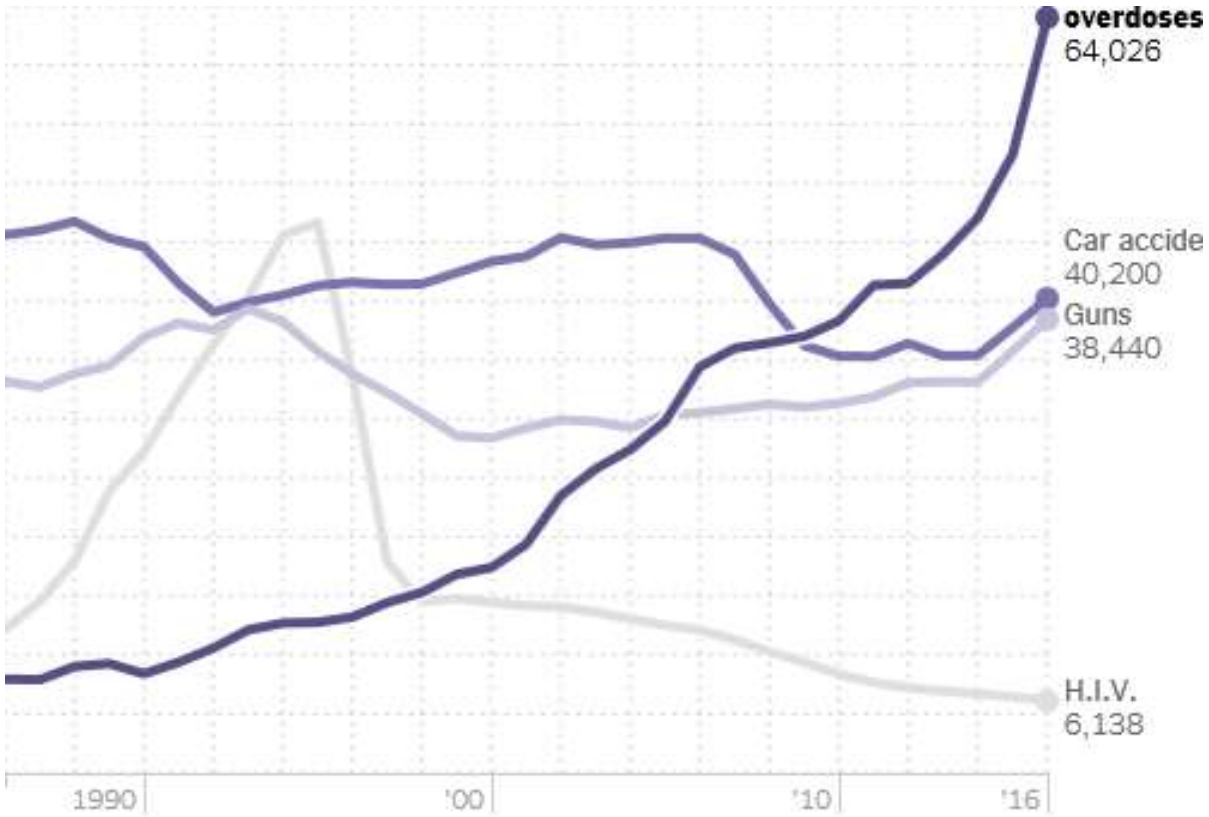
- Public and population health 101: a vision of health equity
- Priorities from the State Health Assessment and State Health Improvement Strategies
- Potential for ongoing collaboration with academic center-based programs:
  - Survivorship
  - Rurality
  - SUD
- Challenges in cancer prevention and early detection
  - Lung cancer
  - Our State Cancer Plan

Substances Used by Vermonters ages 12+ by Substance Type

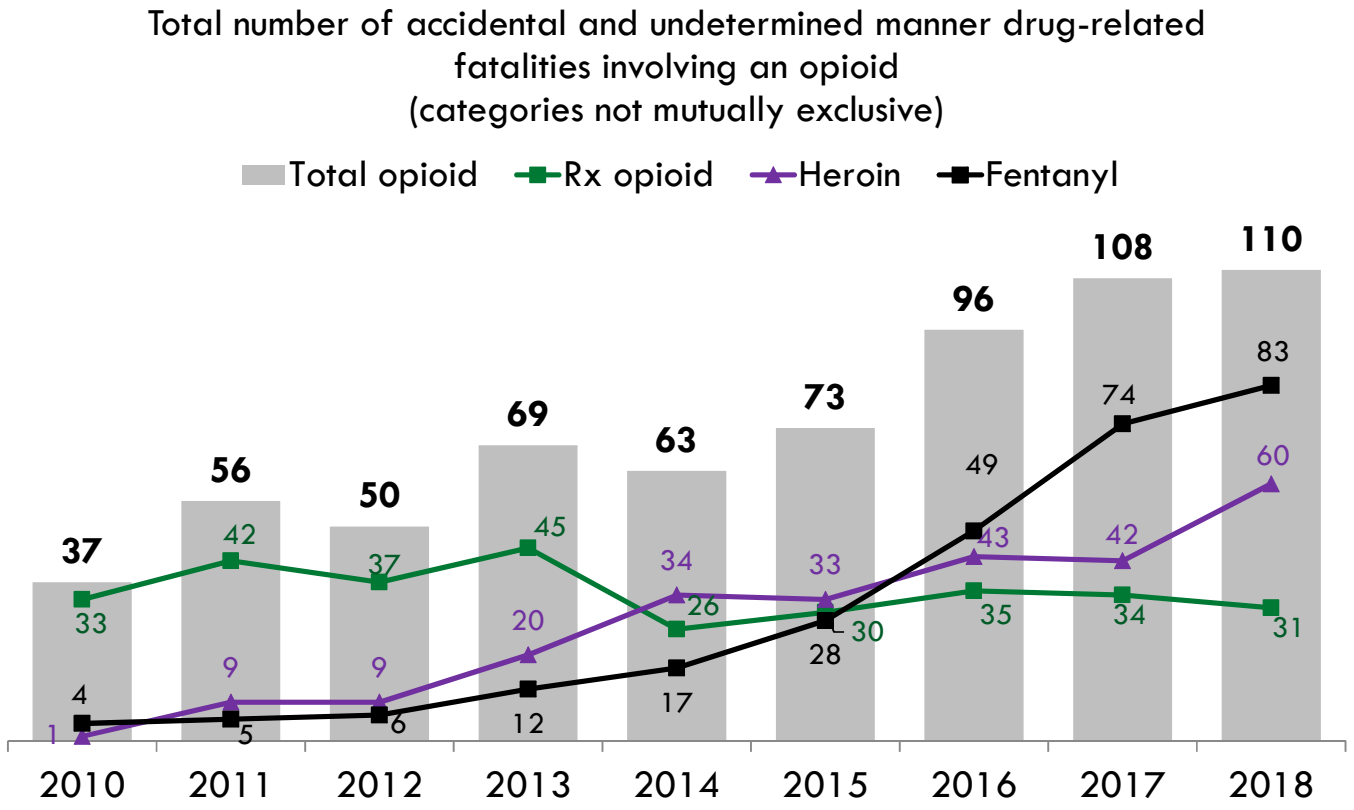


Source: National Survey on Drug Use and Health, 2002-2016. Methodology changes for Rx drug occurred in 2015
Note: * delineates a significant drop since 2011/2012 ($p<0.05$)

US Drug overdoses have overtaken car accidents, guns and HIV as cause of death and are leading cause under age 50

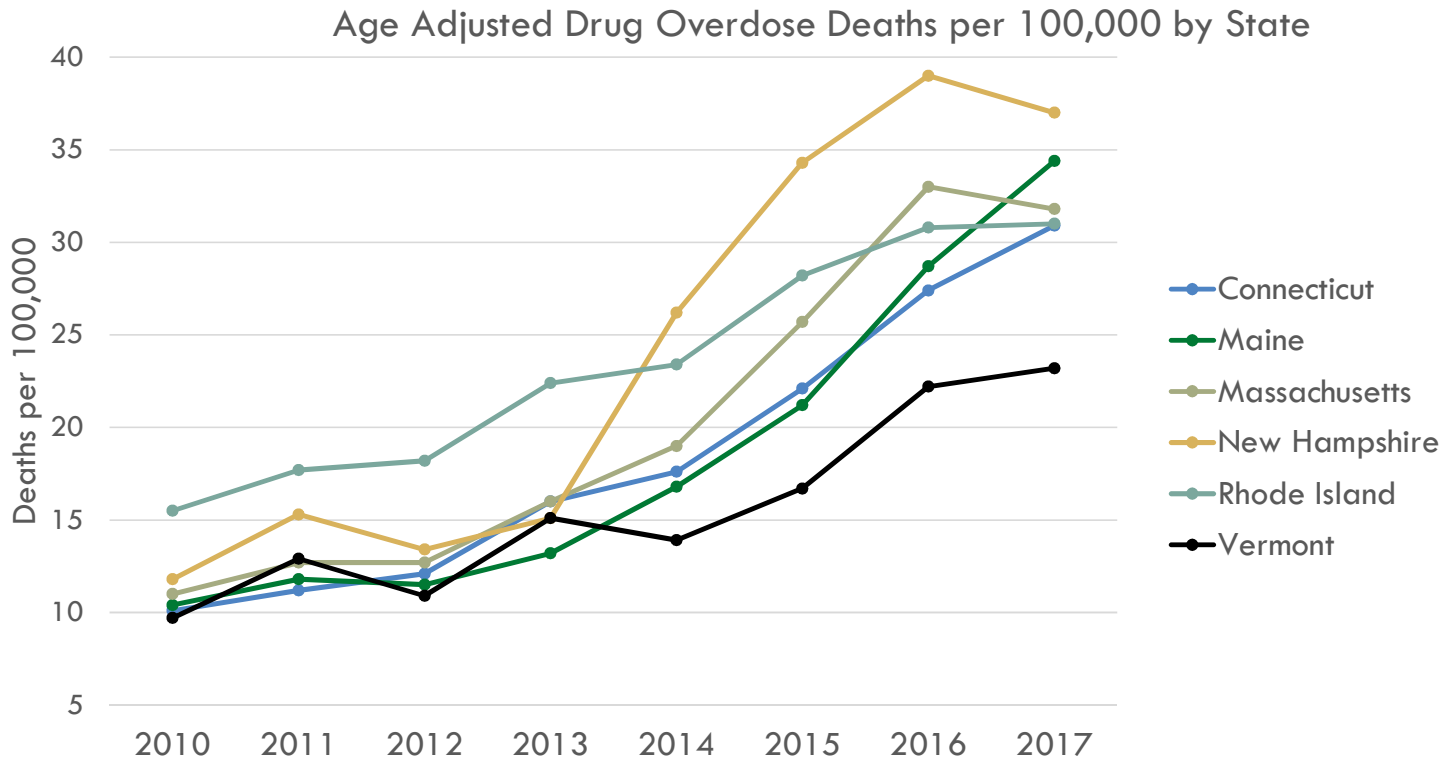


Drug-Related Fatalities Involving Opioids



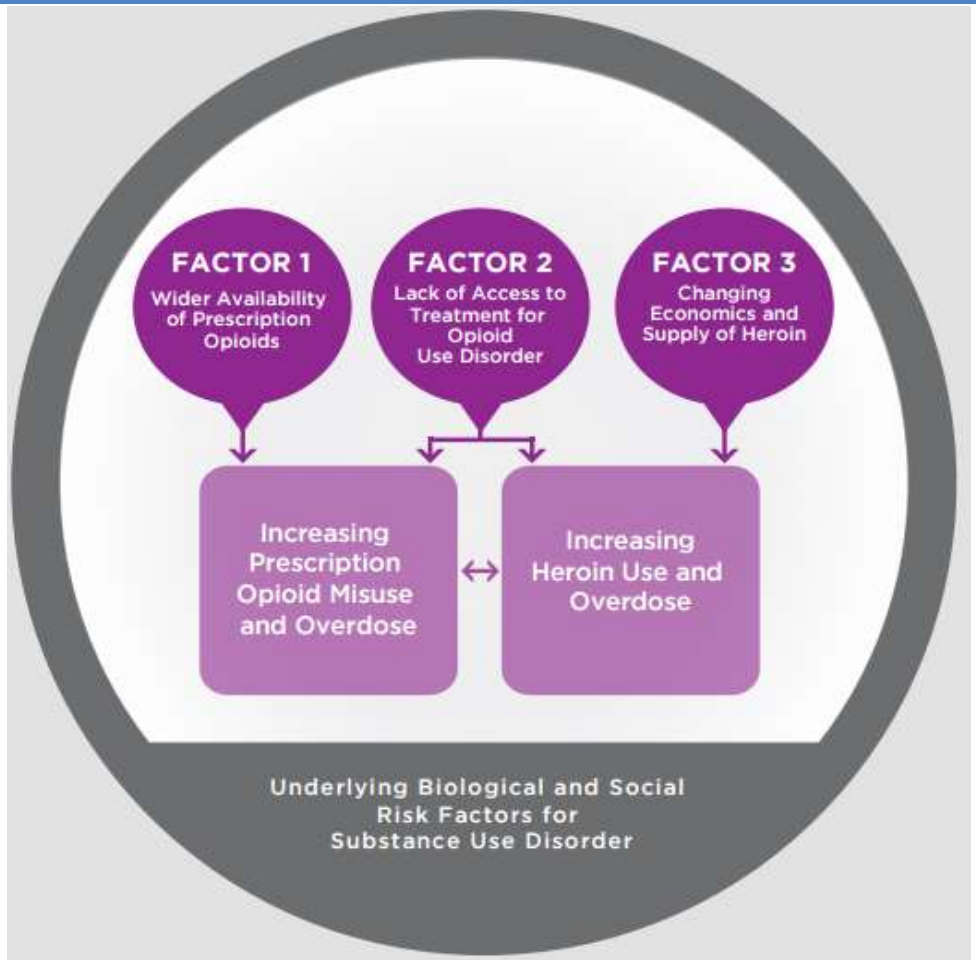
Source: Vermont Department of Health Vital Statistics System

New England - Any Drug Overdose Deaths



Source: CDC/ NCHS

Major Factors Driving the Prescription Opioid and Heroin Epidemic



Source: NGA

The Basic Three Components that any State Must Prioritize

1. Prescriber-focused prevention: decrease circulating supply, develop clinical and surveillance tools.
2. Harm reduction-focused: improve naloxone availability.
3. Treatment-focused: expand access to Medication-Assisted Treatment.

Vermont's Prescriber Rules and PDMP

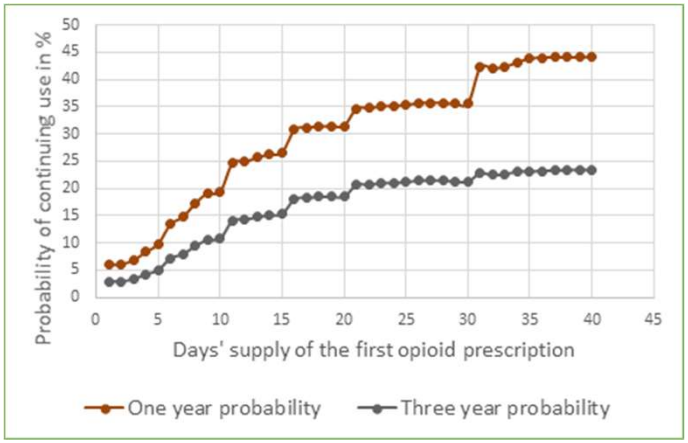
The Problem

- As many as four out of five heroin users begin by abusing prescription drugs
- Of those who abuse prescription opioids, seven out of 10 received these drugs through methods of diversion
- Opioids are overprescribed. They are prescribed:
  - Too often
  - At too high a dose
  - For too long
- Prescribers play a role in the supply and use of opioids in communities.

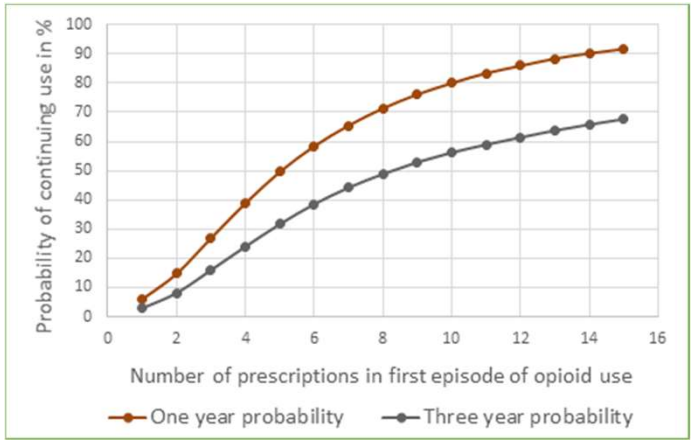
The more opioids prescribed during the first episode of opioid use, the greater the likelihood of continued opioid use

Characteristics of Initial Prescription Episodes and Likelihood of Long-Term Opioid Use — United States, 2006–2015

One- and 3-year probabilities of continued opioid use among opioid-naïve patients, by number of days' supply* of the first opioid prescription — United States, 2006–2015

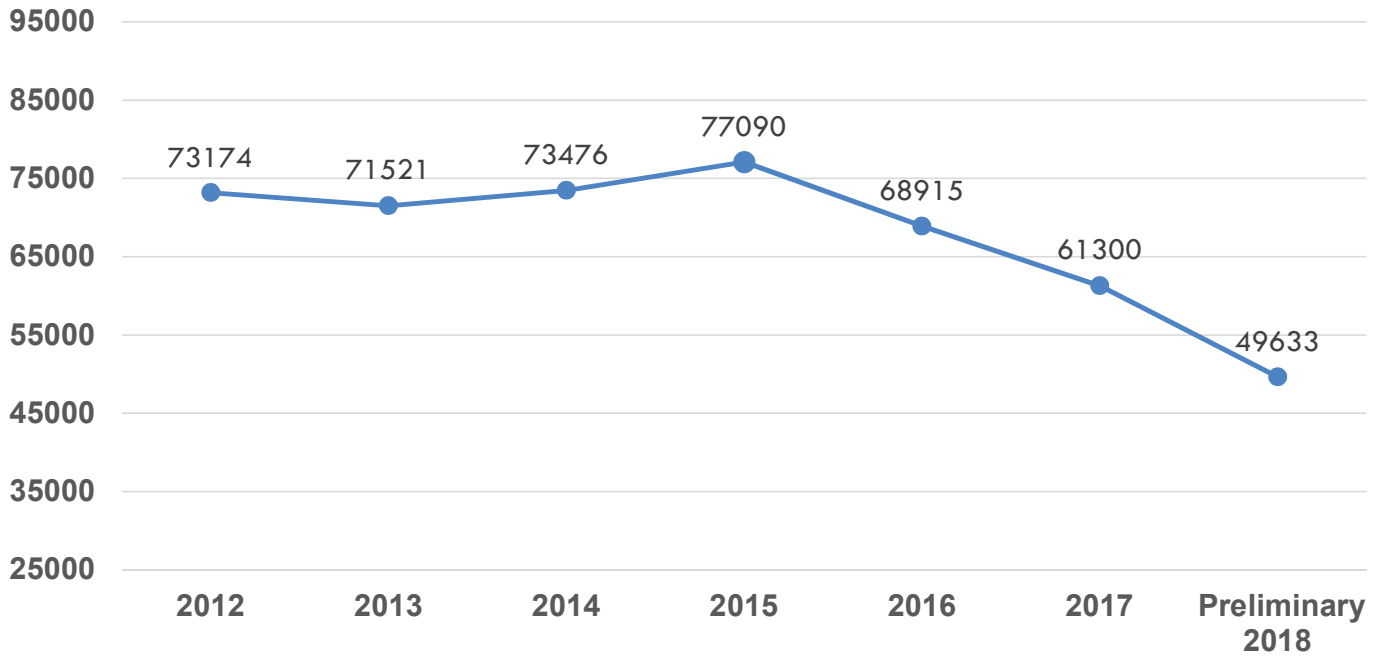


One- and 3-year probabilities of continued opioid use among opioid-naïve patients, by number of prescriptions* in the first episode of opioid use — United States, 2006–2015



Source: Shah A, Hayes CJ, Martin BC. Characteristics of Initial Prescription Episodes and Likelihood of Long-Term Opioid Use — United States, 2006–2015. MMWR Morb Mortal Wkly Rep 2017;66:265–269. DOI: http://dx.doi.org/10.15585/mmwr.mm6610a1.

Fewer Opioid Pain Relievers are Being Dispensed in Vermont - Total MME Opioid Analgesics per 100 Residents



Note: Prior to rescheduling tramadol was not reported to VPMS. On August 14, 2014 tramadol was changed from a schedule V to a schedule IV drug. There was a 36% decrease in dispensed opioids between 2015 and 2018, years that include tramadol.

Our Future is in Prevention-Across the Lifespan

- Messaging campaigns and education to raise awareness, address stigma.
- Evidence-based nurse practitioner home visiting models – ACEs reduction.
- Afterschool curricula and activities for adolescents – the "third space".
- Iceland model – community activation, parental investment, youth voice.
- School-based primary prevention programs.
- Community mobilization – developing and expanding community coalitions.

Objectives

- Challenges in cancer prevention and early detection
  - Lung cancer

THE University of Vermont CANCER CENTER

Socioeconomic Status

Cervical Cancer Screening**

Women 21 to 65 with some college are significantly less likely to meet cervical cancer screening recommendations than those with more education.

Women 25 to 44 are significantly more likely to meet cervical cancer screening recommendations, in comparison to women in other age groups.

Women 21 to 65 in homes making <$25,000 annually are significantly less likely than those with more income to be screened for cervical cancer.

Breast Cancer Screening

Women 50 to 74 in homes making $75,000+ per year are significantly more likely than those in homes making less than $50,000 annually to have had a mammogram.

Colorectal Cancer Screening

Adults 50 to 74 with a high school education or less are significantly less likely to meet colorectal cancer screening recommendations in comparison to those with a college education or higher.

Adults 50 to 74 with low annual household incomes (<$25,000/year) are significantly less likely than those with incomes of at least $50,000 to meet colorectal cancer screening guidelines.

Note: All data is age adjusted to the U.S. 2000 population, except statistics broken down by age only.
**Usually women who have had a hysterectomy are excluded from cervical cancer screening calculations. In 2016, women 45-65 were not asked whether they've had a hysterectomy, and as such the proportion meeting PAP test screening recommendations is underestimated.

Data Source: Breast, Cervical, Colorectal: BRFSS 2016;
Lung: BRFSS 2017

Example - Lung Cancer

Vermont Cancer Plan

Goal 10. Increase early detection of lung cancer among Vermonters.

	Objectives	Measures: BASELINE (YEAR)	Measures: **TARGET (2020)**
10.1	Decrease rate of lung cancer diagnosed at an advanced stage among adults 55+. (Per 100,000 persons, Data Source: VCR)*	210.0 (2008-2012)	**199.5**
10.2	Decrease % of lung cancers diagnosed at an advanced stage among adults 55+. (Data Source: VCR)	80% (2008-2012)	**76%**
10.2	Increase % of adults age 55-80 who are current or former smokers (quit within 15 years) with no history of cancer who had discussed lung cancer screening with a health care provider. (Data Source: Adult Tobacco Survey)	N/A	**N/A**

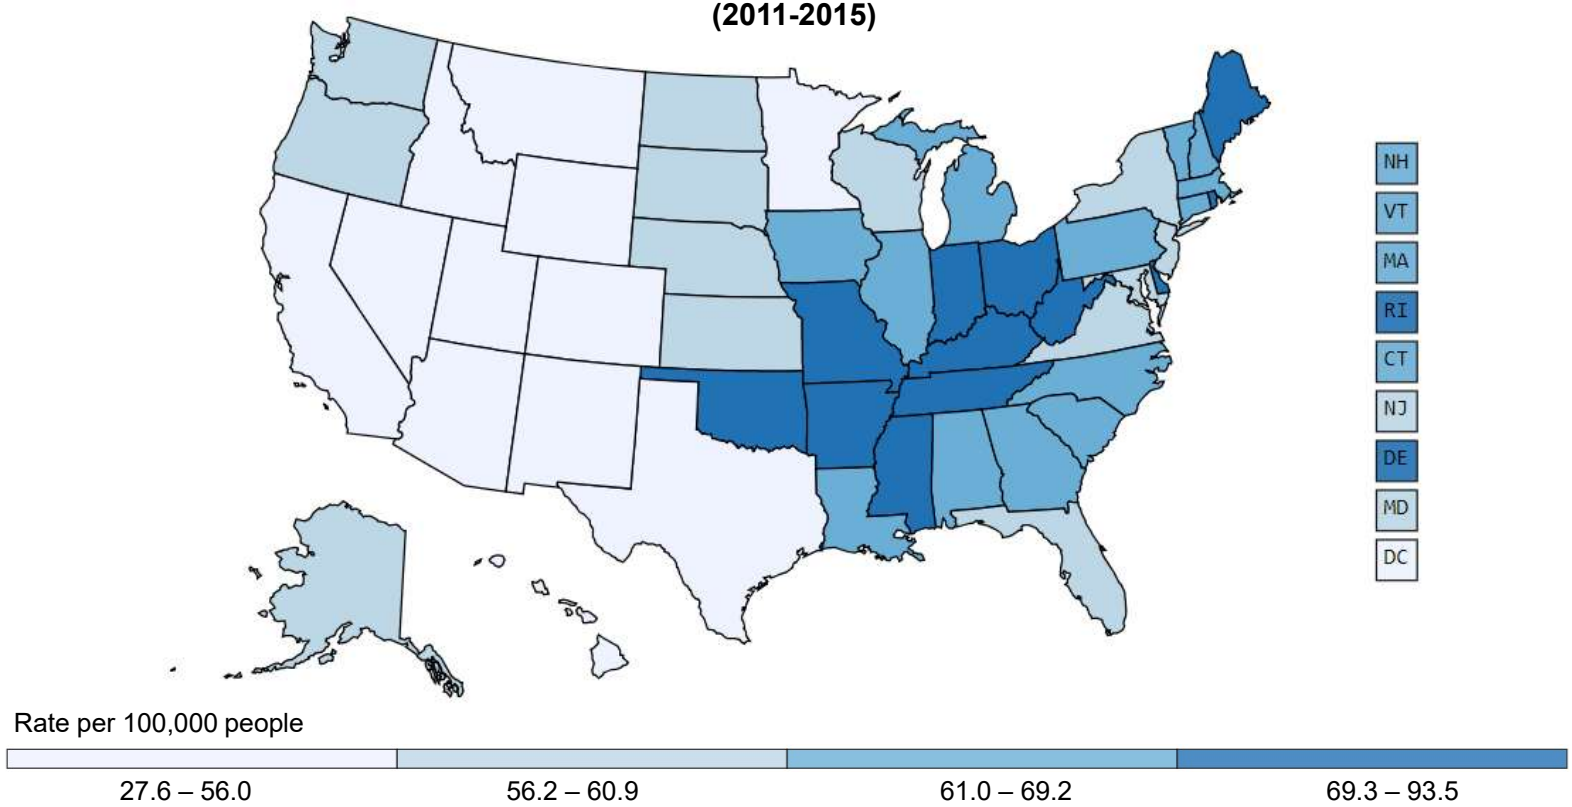
* Measure is age adjusted to the 2000 U.S. standard population.

Strategies

- Promote nationally recognized lung cancer screening guidelines to health care providers and to the public.
- Conduct provider and public education and training to increase awareness of the need for lung cancer screening and the use of risk assessment to determine who should be screened.
- Develop a system for measuring the number of Vermonters receiving lung cancer screening.
- Increase the capacity of hospitals to screen adults for lung cancer.

How do Vermont Lung Cancer Incidence Rates Compare to Other States?

New Cases of Lung and Bronchus Cancers, Rate per 100,000 persons (2011-2015)

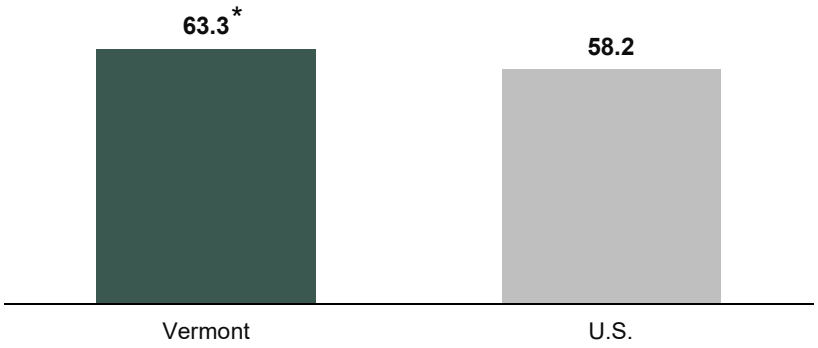


Data Source: U.S. Cancer Statistics 2011-2015

Lung Cancer Incidence

From 2011 to 2015, there were about 522 cases of lung cancer per year in Vermont.

Lung and Bronchus Cancer Incidence in Vermont and U.S., Rates per 100,000 persons, 2011-2015



Note: All rates are age-adjusted to the 2000 U.S. standard population.

*Statistically higher than the U.S. rate.

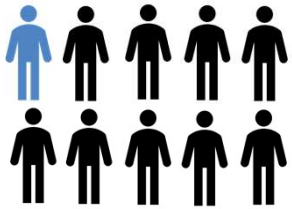
Data Source: Breast, Cervical, Colorectal: BRFSS 2016;
Lung: BRFSS 2017

Disparities in Screening Eligible Population

About one in ten Vermonters ages 55-80 are eligible to receive lung cancer screening.



=

19,100 Vermonters ages 55 to 80 are eligible to receive lung cancer screening.

Who is Eligible?

About one in five Vermonters ages 55-80 with a high school education level or an annual income <$25,000

About one in four Vermonters ages 55-80 with an independent living disability

About one in three Vermonters ages 55-80 with a self-care disability

Pilot Projects Program (PPP)

Jane Lian PhD (UVM) Core Leader

Doug Sawyer MD PhD (MMC) Co-Leader

June 7 2019 EAC meeting

Maine Medical Center

The University of Vermont

UNIVERSITY OF SOUTHERN MAINE

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Mission of the NNE-CTR

Enhance rural healthcare in northern New England by fostering and coordinating clinical, translational and educational research activities.

Vision of the PPP

The Pilot Project Program goals are to encourage innovative *basic science and clinical research proposals* that meet the challenges of healthcare delivery—by leveraging NNE-CTR Core Resources to conduct collaborative clinical and translational research in the priority areas of addiction, cancer and cardiovascular disease.

NIH Expected Outcome

PPP grants are to lead to an NIH (or other extramural) proposals with collaborators in the NNE-CTR Network across multiple institutions, expanding the findings of the pilot project that can be implemented to increase better healthcare.

The PPP aims to facilitate the formation of interdisciplinary teams that conduct collaborative CTR of importance to our communities, especially those in remote areas.

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Pilot Project Core: SPECIFIC AIMS

Aim 1: Recruit investigators and facilitate the formation of interdisciplinary teams that conduct innovative collaborative CTR of importance to the rural community.

Aim 2: Assure the success of CTR Pilot Project Award investigators through maximizing use of innovative NNE-CTR Core functions.

Aim 3: Continuously assess the “value added” by the Pilot Projects to the CTR in collaboration with Tracking & Evaluation Core.

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Specific Activities of the PPP in 2018–2019

Working with applicants and funded Investigators

Prior to proposal submission

- Respond to inquiries from new investigators
- Set up contacts for collaborations between MMC and UVM
- Meet with investigator and leaders of Rural Health Research & Delivery and Clinical Research Design, Epidemiology & Biostatistics Cores to crystallize the PI's ideas into an appropriate study plan

During the funding period of each Awardee, we

- Monitor needs and may have studio sessions with PPP, Translational Research Technologies, Professional Development Core
- Document progress (Tracking & Evaluation Core)
- The PPP schedules meetings with PIs at each Institution to assure that their needs are being met particularly during the first 2-3 mo

After Grant is completed

- Drs. Sawyer (MMC) and Lian (UVM) continue to conduct ad hoc meetings with investigators to prepare abstracts for national meetings and those who are preparing extramural grants

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

New Activities of the PPP 2018-2019

- **The PPP planned monthly Progress Report mini-symposium series** (started in January) in 2018 rotating n= 2 or 3 projects/month) for presentations by grantees at their 2-3 mo, 5-6 mo and 10-11 mo stages (30 min)
  - Brings the members together between MMC and UVM
  - PIs obtain valuable feedback from Core Leaders
  - We identify early if there are any hindrances

- **Consultation with Tracking & Evaluation** (conference calls, emails) to discuss PPP-prepared forms for monitoring Pilot Project progress that were complementary to the T&E annual questionnaire. *These are currently in use*.

- **Poster Session for the Annual Research Symposium Day** – at UVM this year. Invitations were extended to Investigators who submitted a proposal (and just missed getting funded) in order to stimulate collaborative grants

- **Initiated the call for Round 3 proposals** - completed the review process in a timely manner for PIs to obtain IRB approval by July 1 start dates

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Round 2 Investigators: Progress Report Mini Symposia Presentations

Held via Zoom between Maine and Vermont
Questions were asked by the audience after each 30 min presentation

Kinna Thakarar (MMC) Rural Harm Reduction Access and Regional Trends ("Rural HeART") – *Addiction Related*

Kathleen Motyl (YI - MMC) Direct and indirect mechanisms of *opioid-induced bone loss* (MMC, UVM and Dartmouth) Multisite investigators

Teresa May (MMC) An Atlas of Rural and Urban Variation in Cardiac Arrest Processes of Care and Outcomes in Northern New England: *Toward improved outcomes after rural cardiac arrest*

General Discussion: Present were 4 Core Leaders at UVM (5th was a call-in) and 5 Core Leaders at MMC

- Advice by Core Leaders was given
- PI Feedback. Awardees were asked to describe challenges of the proposal and how the PPP and other cores could help them

Post Presentation Written Report Forms (one page): Submitted by Core Leaders and by Principal Investigators

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Round 1 Investigators : Mini - symposia Progress Reports

Alexa Craig (MMC): **Leveraging Telemedicine to Reduce Disparities in Time to Initiation of Therapeutic Hypothermia in Rural Settings: a Pilot Feasibility Study.** *Used live telemedicine consults between rural hospitals and our tertiary care center to demonstrate a reduction in the time to initiate hypothermia for infants born in rural hospitals*

Janet Stein (UVM): **Discovering the Potential of tsRNA as Breast Cancer Biomarkers and Therapeutic Targets.** *Proposal determines if a recently discovered class of small molecules, tsRNAs, 1) promote aggressive characteristics of breast cancer cells and 2) are a non-invasive biomarker of breast cancer*

Jessica Heath (UVM): **Targeting Cell Adhesion in CALM-AF10 Leukemias.** *She identified that CXCR4, ITGA4 and ITGB1 are more highly expressed on the surface of CALM-AF10 + human and murine leukemia cell lines. A co-culture system was established between human mesenchymal stromal cells and leukemia cells, that can be separated for downstream analysis by CD45 expression to address interactions that contribute to this aggressive leukemia*

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Major Accomplishment: Round 3 Operational Timeline for Year 3 (July 1, 2019 to June 30, 2020)

Call for Proposals – September 2018 (a month earlier than previous year to assure IRBs would be planned and included as part of the final proposal)
Letter of Intent (LOI) – 30 RECEIVED November 2018
3 were not invited to submit full proposal (as not relevant to the NNE-CTR)
Full proposals submitted – 27 RECEIVED February 2019

- 11 addiction
- 9 cancer
- 5 cardiovascular
- 2 other
  - Early investigators
  - Multi–Institutional sites

Reviewed 23 proposals March 11, 2019

- 4 were withdrawn from full proposal
- 2 after submission, were found not eligible due to current COBRE funding

Round 3: Request for Proposals

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Outcomes

Score Ranges for 23 proposals

1.0-2.5	5 proposals + 1 (see below)
2.8 -4.5	7 proposals
5.0-8.0	8 proposals
Not Scored	(2 proposals)

Finalists

Investigator	Title
Mauriti/Mackey	Emergency Department-Initiated Buprenorphine Intervention for Opioid Use Disorder
Francis	Screening and Cardio-surveillance of Cancer Patients Undergoing Immune Checkpoint Blockade
Sammon	The development of an enhanced clinical encounter as method of improving shared decision making at the time of PSA elevation
O'Reilly	Sleep Disturbance on Bedside Electroencephalogram: A Biomarker for Severe Neonatal Abstinence Syndrome
Ahrens	Feasibility of using administrative data to follow pregnant women longitudinally over time: Maine and Vermont
Lidofsky	Harnessing the Electronic Health Record in Primary Care for Hepatocellular Carcinoma Surveillance in Cirrhosis **Note: Partial funding to replace Meisfeldt in Round 2**

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Upcoming Progress Report Oral Presentations
June 24, 2019

Michael La Mantia (YI, UVM) Feasibility and Preliminary Effectiveness of a Community Health Worker-Delivered Intervention to Slow Progression of Functional Decline among At-Risk Rural Older Adults (Co-Investigators at UVM, MMC, Dartmouth)

Timothy Plante (UVM) and Kathleen Fairfield (MMC) Leveraging Health Records to Explain Rural Cardiovascular Disease Disparities

Paul Han (MMC) and Robert Gramling (UVM) Northern New England Palliative Care Teleconsult Research Laboratory

Attendees

Pilot Project Leaders (J Lian/VT, D Sawyer/ME)
Administrative Core (C Rosen, G Stein, T Gridley, G Jensen, M Oestreicher, J Smith)
Clinical Research Design, Epidemiology & Biostatistics (S Santangelo/ME; B Cole/VT)
Rural Health Research & Delivery (J Carney/VT; N Korsen /ME)
Translational Research Technologies (F Carr/VT; B Friesel/ME)
Tracking & Evaluation (B Joly/ME; E Ziller/ME)
Professional Development (K Luebbers/VT; I Brodsky/ME)
Team members of the Awarded Grant

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Current and Future Plans

MONITORING 10 current awardees and 5 Round 3 grantees

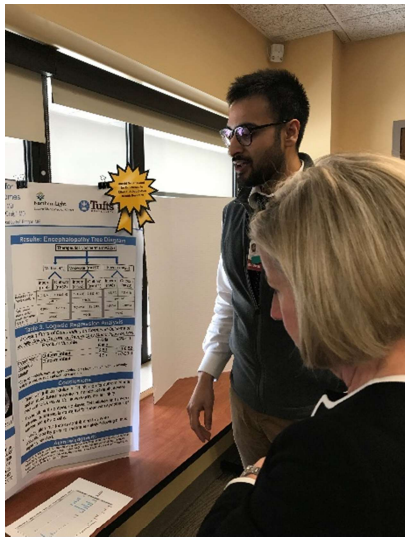
- **Meet with Round 1 and Round 2 Investigators** to follow up re submitting abstracts to national conferences and writing manuscripts.
- **If grant is not multi-Institutional**, we will facilitate collaborations with a partnering academic center for preparing and strengthening the grantees' NIH or other extramural applications.
- **Poster sessions scheduled in May at MMC and June at UVM** are fostering communication among members of the network. We extended invites to submit posters, regardless of funding status.

18 posters submitted for June session:

2 from MMC (Craig, Motyl)

11 from UVM (PP Awardees: Plante (2), Heath, LaMantia, Mackey, Stein J), Harder (Supplement), plus 4 from Non-Awardees

Core posters: 1-Prof Dev, 2-UVM Rural Health, 1-MMC Rural Health; 1-NNE-CTR



NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Challenges for the PPP to Overcome

IMPROVED OUTREACH is needed to stimulate awareness of research leading to collaborations between basic and clinical researchers, practicing physicians and other facilitators of heathcare delivery in rural northern New England

GOOD GRANTS are being submitted that address rural health disparities, ~ 60%, targeted to specific situations and disorders, but only 5 can be awarded. Difficult decisions. We are encouraging more basic science grants with clinical partnerships.

A BALANCED PORTFOLIO must be maintained that includes innovative and mechanistic research leading to discoveries that meet the mission of the CTR, and expectations of NIGMS in which Pilot Projects will have generated data to move on to external funding.

TO REINFORCE A PIPELINE OF TRANSLATIONAL RESEARCH to clinical application requires multidisciplinary teams, and the PPP, along with other core leaders, are doing their best to facilitate the necessary collaborations

AHA PRESIDENTIAL ADVISORY

Call to Action: Urgent Challenges in Cardiovascular Disease

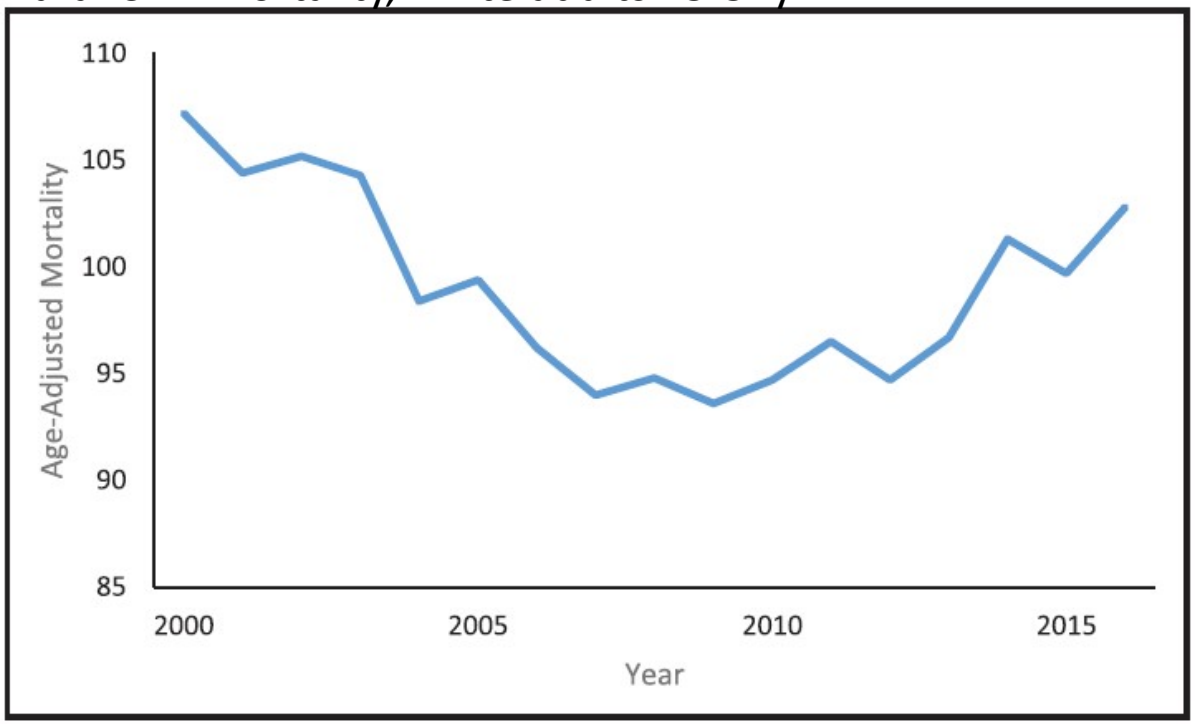
A Presidential Advisory From the American Heart Association

ABSTRACT: Although advances in care have spurred improvements in cardiovascular outcomes, cardiovascular disease remains the leading cause of death in the United States and around the world. Previous declines in cardiovascular disease mortality have slowed and even reversed for certain demographics. Further concerns exist with regard to cardiovascular drug innovation, quality of care, and healthcare costs. The Value in Healthcare

Mark McClellan, MD, PhD
Nancy Brown, BS
Robert M. Califf, MD, MACC
John J. Warner, MD, FAHA

McClellan M, et al. Circ 2019. https://www.ncbi.nlm.nih.gov/pubmed/30674212

Rural CVD mortality, white adults 45-54y

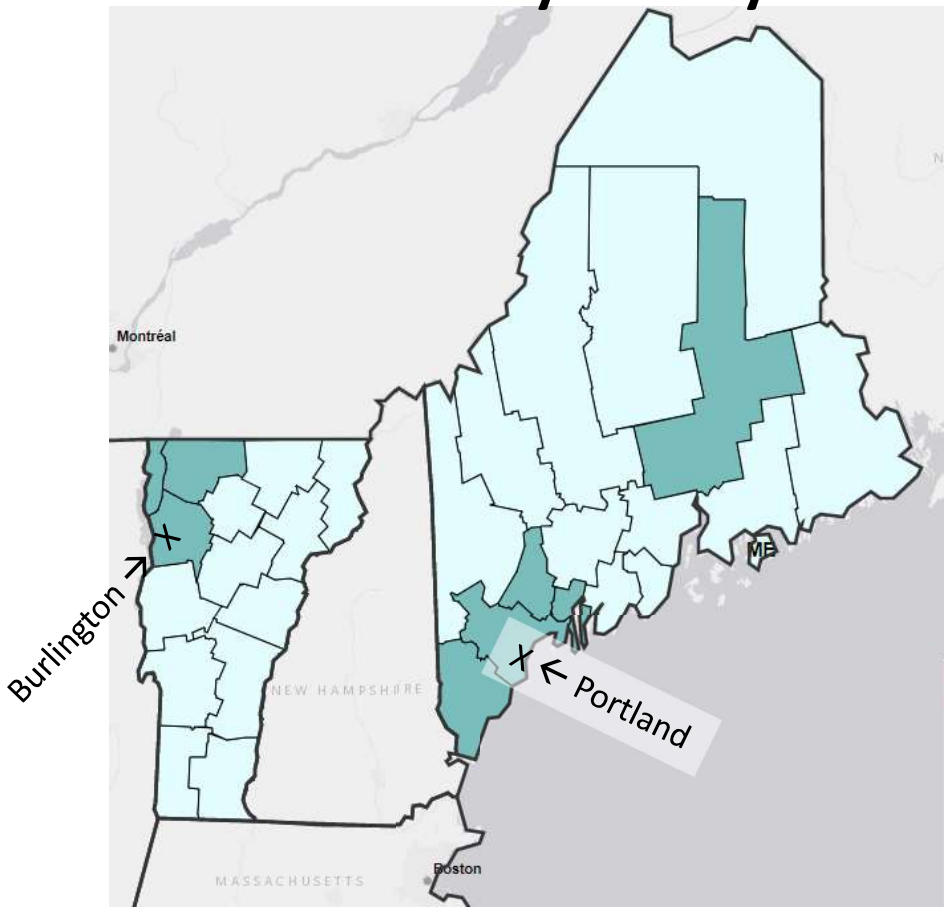


Failure to:

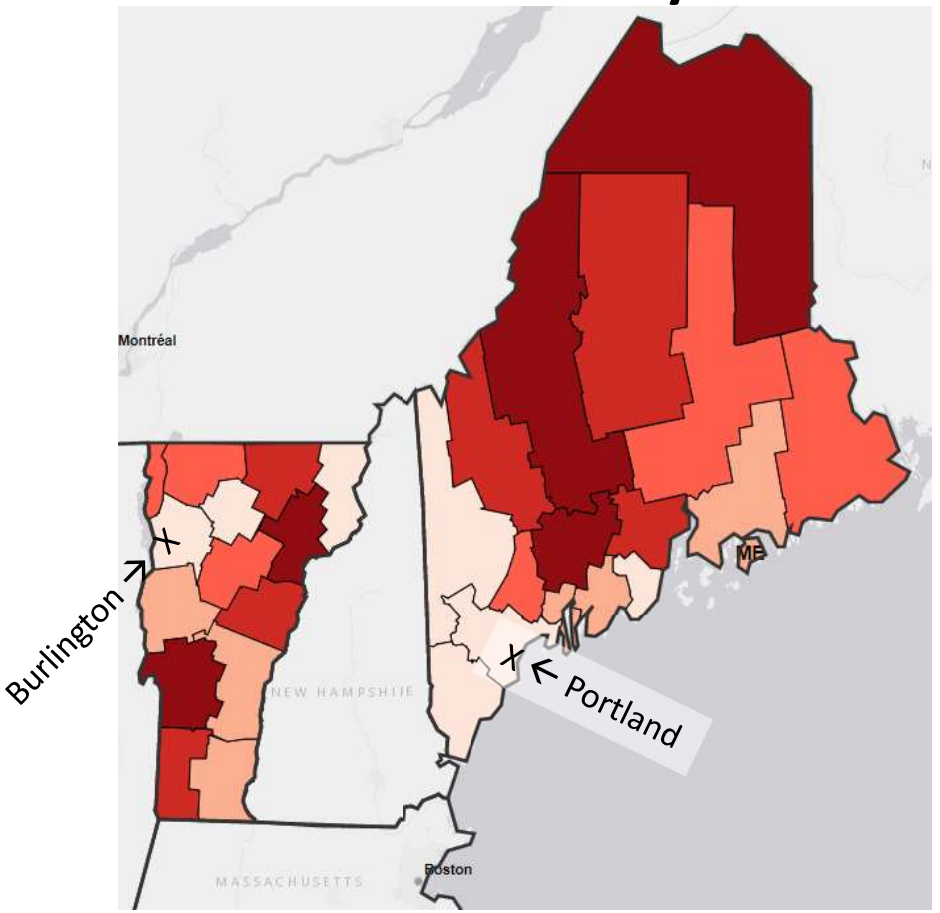
- Make risk factor modifications
- Diagnose
- Use proven first-line treatments

McClellan M, et al. Circ 2019. https://www.ncbi.nlm.nih.gov/pubmed/30674212

Counties by rurality



CVD mortality



https://nccd.cdc.gov/dhdspatlas/

Contributors to rural CVD differences

- Known barriers:
  - Access to care
  - Income disparities
  - More smoking
  - More obesity
- Unknowns:
  - CVD risk factor control?

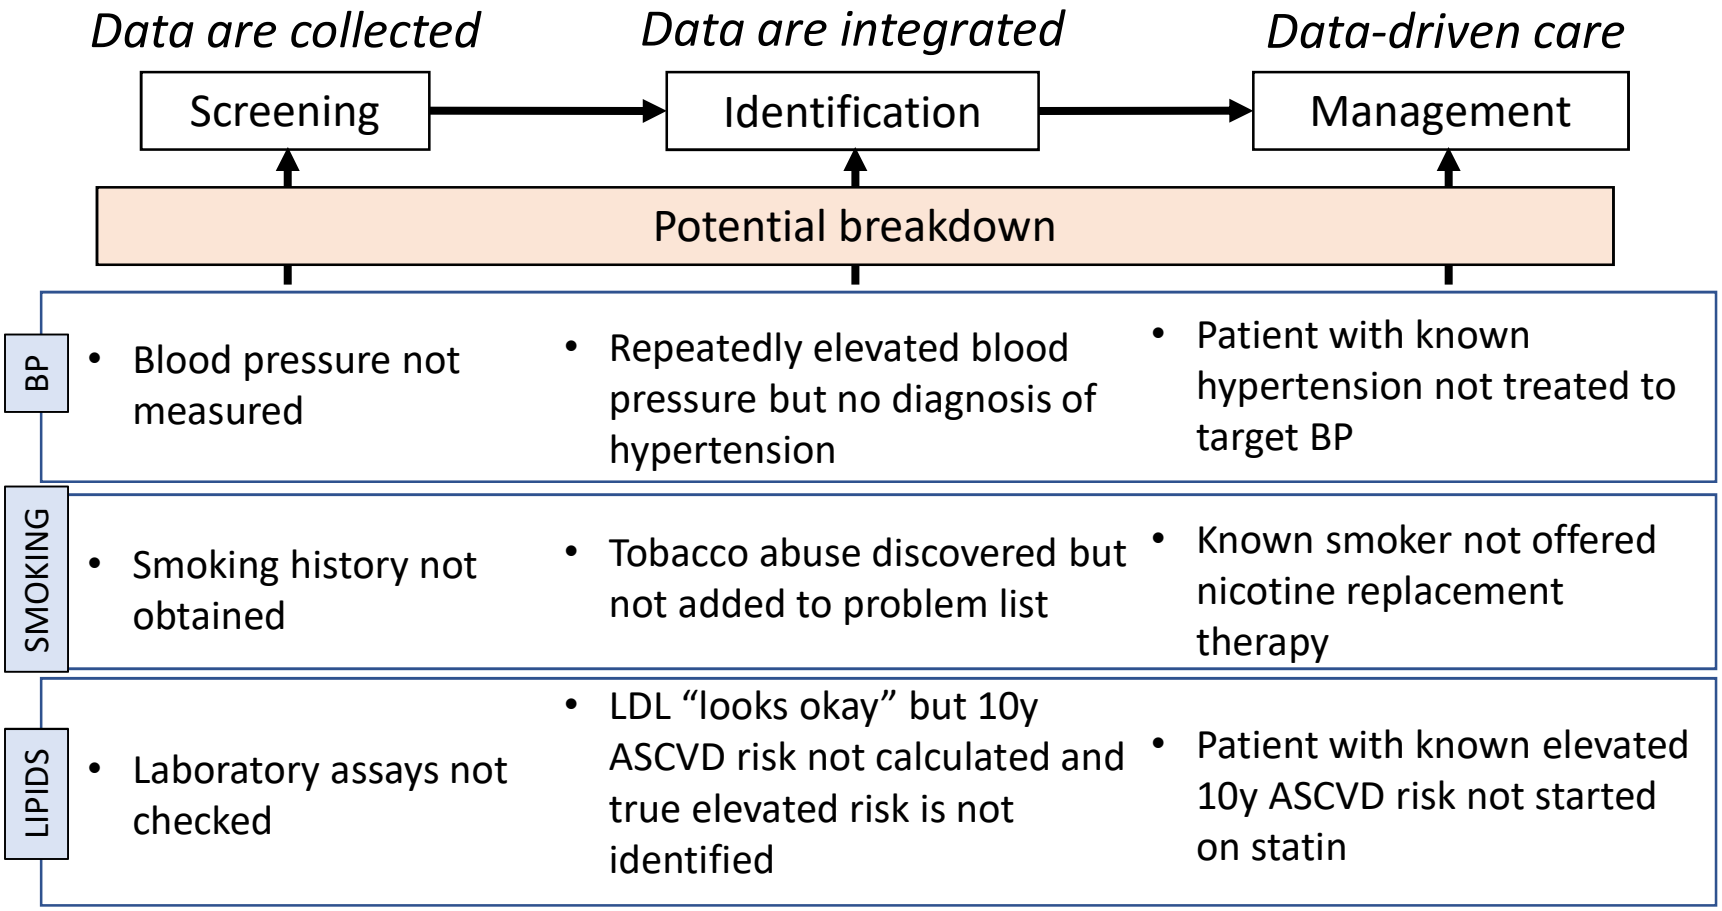
CVD risk factor control



RUDICA

Rural/Urban Disparities in Cardiovascular Assessment

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- **Pilot**: Identify breakdown points for CVD risk factor control among rural adults with primary care providers in Vermont and Maine.
  - UVMMC
  - Maine Medical Center (MMC; Portland, ME)
- **Future studies**: Address these breakdown points with additional interventions.
- Local research group: UVM Laboratory for Clinical Biochemistry Research
  - Colchester Research Facility

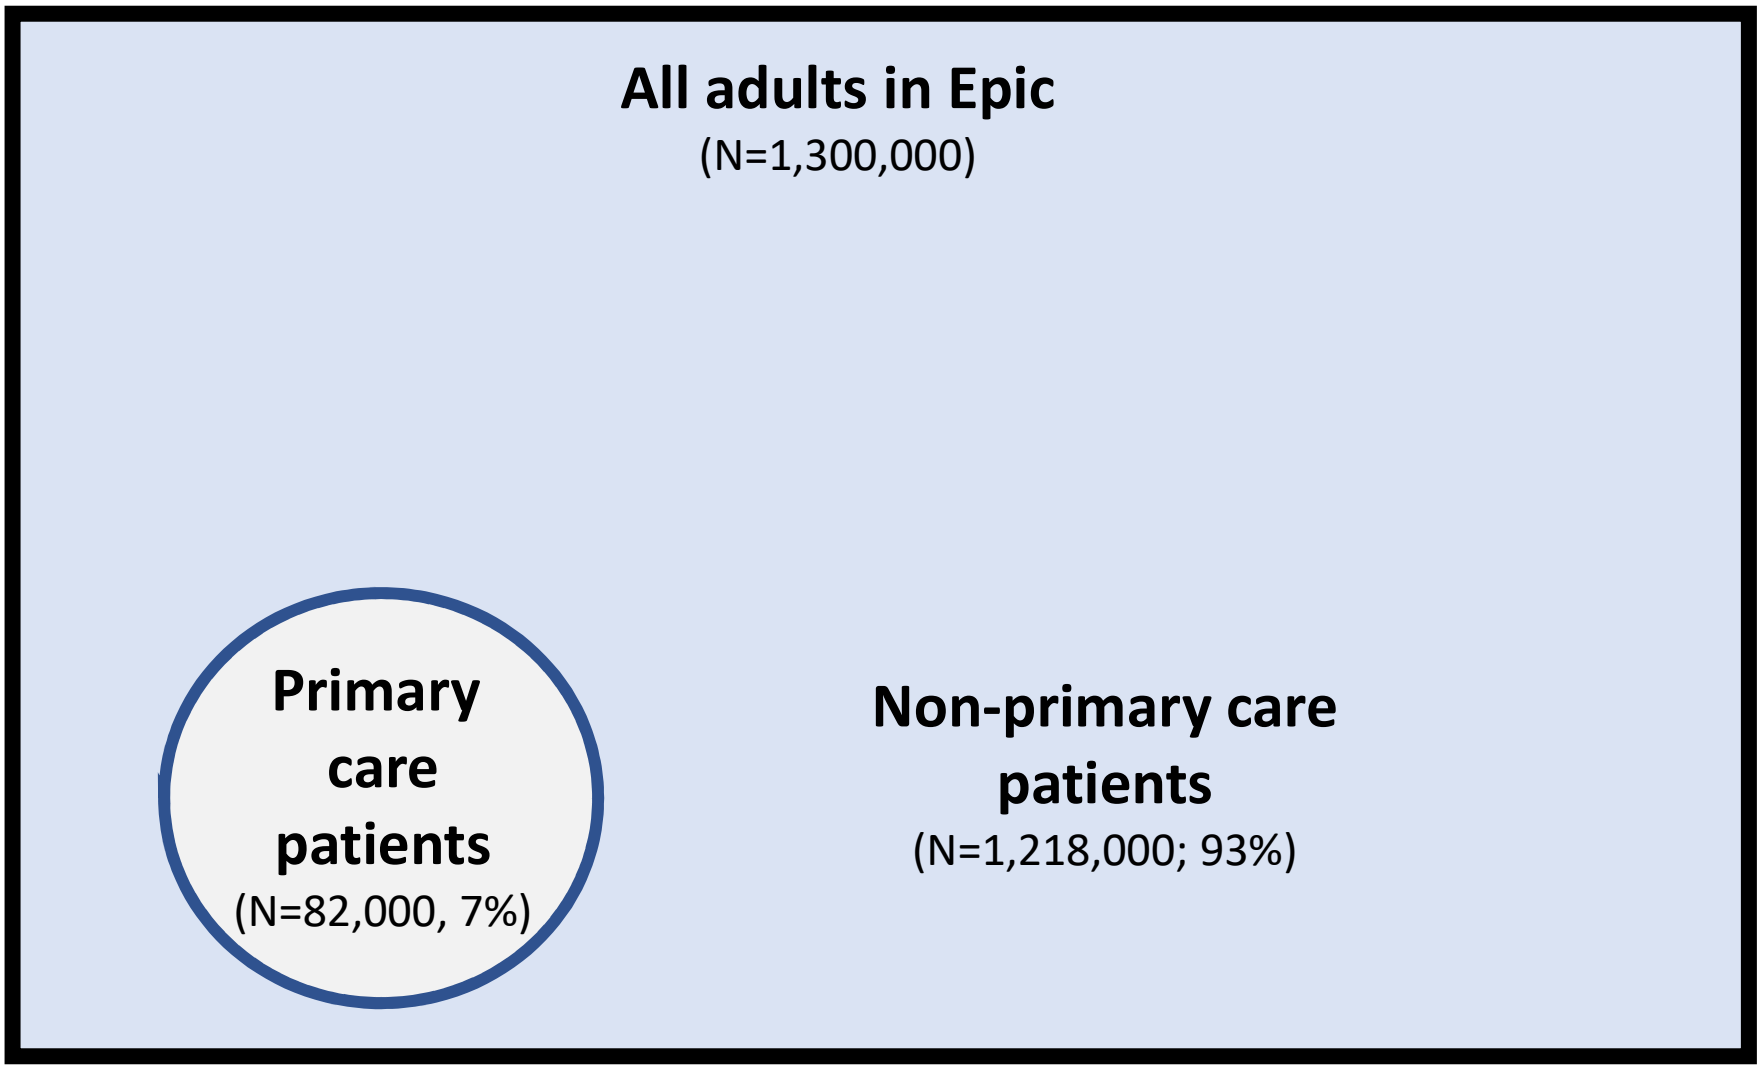
Enter the EMR

RUDICA
Rural/Urban Disparities in Cardiovascular Assessment

- UVMMC and MMC use the same EMR
  - UVMMC installation 2010
  - MMC installation 2012
- Cohort:
  - Alive and deceased adults patients with a primary care provider at UVMMC (or private practice using the EMR) or MMC
  - UVMMC: 10/1/2010 through 6/30/2018
    - Received complete data
  - MMC: 12/1/2012 through 6/30/2018
    - Actively receiving data

UVMMC patient populations

RUDICA
Rural/Urban Disparities in Cardiovascular Assessment



Why focus on primary care patients?

- Primary care patients
  - Disease prevention and management
  - Longitudinal care at UVMMC
  - Internal referrals
  - More likely to have imaging and labs at UVMMC
- Non-primary care patients
  - Disease management
  - Sporadic care at UVMMC
    - May have longitudinal care elsewhere

Primary care patients have access to care and are more likely to have continual care documented within our EMR.

**Atherosclerotic cardiovascular disease

Hazard ratio (95% CI) Age-, age^2-, sex-adjusted mortality risk by urban/rural status

Group	All-cause mortality	Heart disease mortality*	ASCVD mortality
Urban	Reference	Reference	Reference
Any rural	1.09 (1.002, 1.18)	1.21 (1.02, 1.44)	1.25 (1.03, 1.51)
Large rural	1.06 (0.97, 1.17)	1.13 (0.93, 1.38)	1.20 (0.96, 1.49)
Small and isolated rural	1.18 (1.01, 1.39)	1.48 (1.08, 2.04)	1.43 (1.00, 2.05)

*Atherosclerotic cardiovascular disease (ASCVD), heart failure, hypertensive heart disease, sudden cardiac death, and heart disease not otherwise specified.

Conclusions

- Rural primary care patients die younger, a large driver is excess cardiovascular disease.
- Identifying differences in primary prevention of cardiovascular disease can inform interventions to mitigate this risk.

Goal: Provide coordinated access to state-of-the-art shared resources developed at the institutions through a combination of COBRE, INBRE, institutional and other forms of support over the last several years.

Resources crucial to the success of research by NNE-CTR investigators:

- Experimental design, selection of methodologies, analyses, presentations, education
- Infrastructure and technical expertise for genomic, epigenetic, proteomic, cell and tissue analyses and clinical and translational genomics.
- Shared instrumentation and scientific expertise

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

TRANSLATIONAL RESEARCH TECHNOLOGIES CORE SPECIFIC AIMS

Aim 1: Establish a coordinated infrastructure of shared technology resources for a sustainable translational biomedical research program.

Aim 2: Provide education and training in the application and use of advanced technologies for translational research investigations.

Aim 3: Establish a robust process for evaluation of core technologies to ensure appropriate allocation of core resources, monitor core utilization, and ensure that the cores are meeting the needs of NNE-CTR investigators.

RESEARCH NETWORK

Shared technology resources for a sustainable translational biomedical research program-New capabilities enhance rigor and reproducibility

Proteomics and lipidomics: In-house nanoscale liquid chromatography column fabrication; brought on-line a new preparative HPLC platform (Agilent) with a collection of relevant columns (Phenomenex), which allows us to offer 2-dimensional proteomics and TiO_2-based phosphoproteomics. In the coming year this core will expand the use of post-translational modification analyses (Phospho-, acyl- etc.) and more top-down methods, including protein epitope mapping.

Genomic Medicine Laboratory: This resource ensures that genomic testing informs clinical trial investigation and improves the quality of care for patients in rural environments. The validated **GenePanel Solid Tumor (GPST)** has been used towards clinical trials. Currently being validated: NGS panels for Acute Myeloid Leukemia, comprehensive hematologic malignancies; an expanded gene fusion detection panel that also will include tumor agnostic *NTRK* biomarkers and pharmacogenomics testing.

Progress

- **Aim 2:** Enhanced education and training outreach on translational research technologies
  - Seminars with partners
  - Launched collaborative technology workshops-interactive training sessions
  - Coordinated with Pilot Projects Cores to ensure that proposed and funded projects are engaged with scientific personnel in relevant cores.
- **Aim 3:** Launched evaluation tools, in collaboration with Tracking and Evaluation and Administrative Cores, to measure the use of core facilities and their effectiveness in advancing clinical and translational research in NNE-CTR as well as to determine the future infrastructure needs of NNE-CTR investigators.

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

Plans

- **Aim 1: Enhance TRT integration into research planning**
  - Clinical Genomics Research Resources Seminar on Research and Collaborations
- **Aim 2: Enhance education and training outreach on TRT**
  - Coordinate with Pilot Projects Cores to ensure that proposed and funded projects are engaged with scientific personnel in relevant cores: **ongoing.**
  - Expanding TAC advisory meetings to ensure opportunities for all investigators.
- **Aim 3: Assess and expand evaluation tools, in collaboration with Tracking and Evaluation and Administrative Cores, to determine the impact of TRT**
  - Developing standardized reporting structure for technical cores.

  84 investigators responded

  - 98% of them said they would work with the Research Navigation Team again and would recommend it to a colleague.
  - 93% said they "strongly agree" or "agree" that the team was "easy to work with"
  - 96% said they "strongly agree" or "agree" that the team "responded to inquiries in a timely manner"
  - 95% said they "strongly agree" or "agree" that the team were knowledgeable
  - 95% said they "strongly agree" or "agree" that the team assisted them in working toward their goals
  - 95% reported being "highly satisfied" or "satisfied" overall with the services, resources or supports provided by the CRDEB Core and Research Navigation Team

Milestones

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- ✓ CRDEB Core leads participated in review of Pilot Project LOIs and grant applications
- ✓ Biomedical Informatics Engineer, David Denton
  - Completed Epic EHR certification training in March
    - Started in December
  - Holds weekly office hours on use of 'R' software
  - Leads R-user's support & info group, monthly
- ✓ Just received notice that grant application submitted to Tufts CTSI in December will be funded
  - $30K to help with OMOP/OHDSI build-out
  - Start date May 1, 2019

Milestones

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- ✓ A day-long Data Carpentry Workshop
  - Was held and recorded at MMC on April 2
  - With video link to UVM to accommodate participants at both locations (30 participants overall)
  - Led by an official Data Carpentry instructor
    - With local facilitation by D. Denton, and two data analysts
- ✓ 2nd (of the year) Clinical Research Course
  - Was held at MMCRI and recorded on April 4
    - Day-long, held bi-annually
  - Didactic video segments will be posted on CRDEB Core web page soon

Challenges

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- Inadequate computational infrastructure for research
  - Even with the new servers we purchased & plan to buy, infrastructure is lacking
  - Purchasing & upgrading hardware to try to keep up is not sustainable in long-run
- Ability to use cloud computing platforms for research
  - MaineHealth IT privacy & security has just agreed to allow use of cloud services for de-identified genomics data only
  - Will not allow cloud usage for patient, EHR or any PHI data
  - Will require much more education and partnership with IT
  - May require dedicated research IT team at MMC
    - MaineHealth does not have a CRIO or any dedicated IT support for research. IT focus is on supporting clinical services (99%)
    - Little recognition that research IT needs differ substantially from clinical

Next Steps

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- Continue meeting with MaineHealth IT
  - To discuss research needs & challenges and find solutions
- Largest project for Y03 will be developing clinical research data warehouse built on OMOP common data model & OHDSI tools
  - Focus of Specific Aim 3
  - To enable cohort discovery to support clinical trials and facilitate use of observational data in research
  - Grant from Tufts CTSI will enable OMOP/OHDSI build-out
    - Both Maine & Vermont hospital systems use Epic EHR
    - Initiate Epic-to-OMOP ETL at MaineHealth, followed by same work at UVM in subsequent years
- Core lead Santangelo is a founding member of the IDeA-CTR Informatics Coalition
  - Participating in monthly calls

Next Steps

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- Explore possibility of hosting our own REDCap instance at MMC/MaineHealth
  - REDCap is a secure HIPAA compliant data storage, and management platform for quality/process improvement initiatives, research, and operational processes
  - Currently we rely on Tufts CTSI for REDCap
    - MMC investigators and operations are heaviest users in number and intensity than entire Tufts community
    - MMC usage places undue burden on Tufts and there is concern they may need to restrict our use in future
  - We are currently estimating costs of hosting REDCap at MaineHealth, getting buy-in & support from IT

Project Examples

NORTHERN NEW ENGLAND CLINICAL & TRANSLATIONAL RESEARCH NETWORK

- Cystic Fibrosis—lung function and continuity of care
- Lung cancer location and risk of lymph node metastasis
- Sleep disturbance on bedside EEG: a biomarker for neonatal abstinence syndrome
- Community health worker-delivered intervention to slow progression of functional decline among at-risk rural older adults
- Harnessing the electronic health record in primary care for hepatocellular carcinoma surveillance in cirrhosis
- Cross-sectional study of the association between circadian phase and challenging daytime behavior in low-functioning children
- Opioid and rural-health collaborations with VDH

Online Summary of Trends in US Cancer Control Measures

Prevention | Early Detection | Diagnosis | Treatment | Life After Cancer | End of Life | Summary Tables

The Cancer Trends Progress Report, continually updated since its first issue in 2001, summarizes our nation's advances against cancer in relation to Healthy People targets set forth by the Department of Health and Human Services. The report, intended for policy makers, researchers, and public health professionals, includes key measures of progress along the cancer control continuum and uses national trend data to illustrate where improvements have been made.

Read our Introduction and Director's Message to learn more about the report.

- About the Report
- Data Sources
- Highlights
- Trends at a Glance
- Recent Updates and Archive

Subscribe for Website Update Notifications

Prevention

Tobacco, physical activity, diet, sun, environment, HPV immunization

Early Detection

Breast, cervical, colorectal, lung, prostate cancer screening

Diagnosis

Incidence, Stage at diagnosis

Treatment

Trends in cancer treatment

Life After Cancer

Financial burden of cancer care, Cancer survivorship

End of Life

Mortality, Person-years of life lost

The report, available only online, can be printed in part or in its entirety. Portions of the report are updated annually, while other sections are updated as new data become available. The full report is updated every year.

E-cigarettes and Smoking Cessation

- Complete switching from cigarettes to e-cigarettes is required to realize potential health benefits
- Understanding the effect of e-cigarettes on cessation is complicated by
  - diversity and rapid change in product marketplace
  - wide variation in motivations for use
  - no product approved for therapeutic purpose
- Few RCTs have directly tested the efficacy of e-cigarettes for cessation – all were conducted outside the U.S.
  - IND requirement makes it impossible to conduct RCT for cessation

NIH E-cigarette Funding Opportunity Announcement

- **PAR 18-847/848: Electronic Nicotine Delivery Systems (ENDS): Population, Clinical and Applied Prevention Research** (R01/R21) - NCI, NIDA, NIDCR, NIMHD
  - Purpose: to support studies on ENDS that examine population-based, clinical and applied prevention of disease (including cancer, dental, oral, and/or craniofacial) including etiology of use, epidemiology of use, potential risks, benefits and impacts on other tobacco use behavior among different populations
  - Specific topics of interest to NCI include, but are not limited to:
    - Studies to identify risk and protective factors for ENDS use, including dual/poly-tobacco product use among youth and young adults (such as, but not limited to, perceptions of risk/benefit, parent influences, peer influences, relationship to other substance use, proximity to tobacco outlets, density of tobacco outlets and other environmental factors)

With Scientific and Public Health Progress Comes New Challenges

President's Cancer Panel Report, 2018

- Most new cancer drugs are priced higher than $100,000 per patient per year
- "Financial Toxicity" can lead to
  - Skipped medication doses
  - Shortened survival
  - Debt, depleted savings, and bankruptcy

US Healthcare Spending and Return

JJ Prochaska, A Sanders-Jackson

JAMA Internal Med
176(1):41-42 (2016)

- Health care spending (2013)
  - $2.9 trillion total
  - $9,255 per capita
  - 42% higher than the next highest per-capita spender
- Return: life expectancy rank
  - 50th among 221 nations
  - 27th among 34 industrialized Organization for Economic Co-operation & Development (OECD) countries

The Growing Number of Ex-Smokers:

What Do We Have to Offer?

NLST Results

- Nearly 55,000 subjects randomized
- Compliance with LDCT very high (~ 95%)
- LDCT screen positivity rates: ~27% at year 0,1; 16% at year 2
- LDCT positive predictive value: 3-4%
- Mortality benefit: reduction of 16-20% in lung cancer mortality (statistically significant)
- Number needed to screen: ~ 320
- Statistically significant 6.7% reduction in all-cause mortality also observed

Current LDCT Lung Cancer – Screening Recommendations

- US Preventive Services Task Force: age 55-80, 30+ pack years, current smoker or quit within 15 years (NLST criteria, age expanded to 80) – Grade B recommendation
- American Cancer Society: NLST criteria
- American College of Chest Physicians, American Society of Clinical Oncology: NLST criteria (exclude those with severe comorbidities)
- National Comprehensive Cancer Network: NLST criteria or age 50+, ≥ 20 pack years, 1 additional risk factor (e.g., COPD, occupational exposure)

USPSTF Clinical Considerations

- **Smoking cessation is the most important intervention to prevent NSCLC.**
- Advising smokers to stop smoking … is the most effective way to decrease the morbidity and mortality associated with lung cancer.
- Current smokers should be informed of their continuing risk for lung cancer and offered cessation treatments.
- Screening with LDCT should be viewed as an adjunct to tobacco cessation interventions.

Smoking Cessation at Lung Examination (SCALE) Collaboration

Purpose

- Determine key components and characteristics of a successful cessation program at low-dose computed tomography (LDCT) screening
- Focus on innovative interventions or implementation methods
- Share data and methods using common measures for cross-project research

Collaborators: 5 R01s funded under RFA CA-15-011 plus 3 related projects

Cancer Epidemiology, Biomarkers & Prevention

Making the Case for Investment in Rural Cancer Control: An Analysis of Rural Cancer Incidence, Mortality, and Funding Trends

Kelly D. Blake, Jennifer L. Moss, Anna Gaysynsky, Shobha Srinivasan, and Robert T. Croyle

Abstract

Estimates of those living in rural counties vary from 46.2 to 59 million, or 14% to 19% of the U.S. population. Rural communities face disadvantages compared with urban areas, including higher poverty, lower educational attainment, and lack of access to health services. We aimed to demonstrate rural–urban disparities in cancer and to examine NCI-funded cancer control grants focused on rural populations. Estimates of 5-year cancer incidence and mortality from 2009 to 2013 were generated for counties at each level of the rural–urban continuum and for metropolitan versus nonmetropolitan counties, for all cancers combined and several individual cancer types. We also examined the number and foci of rural cancer control grants funded by NCI from 2011 to 2016. Cancer incidence was 447 cases per 100,000 in metropolitan counties and 460 per 100,000 in nonmetropolitan counties ($P < 0.001$). Cancer mortality rates were 166 per 100,000 in metropolitan counties and 182 per 100,000 in nonmetropolitan counties ($P < 0.001$). Higher incidence and mortality in rural areas were observed for cervical, colorectal, kidney, lung, melanoma, and oropharyngeal cancers. There were 48 R- and 3 P-mechanism rural-focused grants funded from 2011 to 2016 (3% of 1,655). Further investment is needed to disentangle the effects of individual-level SES and area-level factors to understand observed effects of rurality on cancer. *Cancer Epidemiol Biomarkers Prev; 1–6. ©2017 AACR.*

Introduction

Estimates of the total population living in nonmetropolitan (rural) counties in the United States vary from 46.2 (1) to 59 million (2) people, compared with more than 250 million people living in urban areas. This represents 14% to 19% of the U.S. population (1, 2). Rural communities face notable disadvantages compared with urban areas, including higher poverty rates, lower educational attainment, a higher proportion of elderly individuals, lack of access to health services, and a lack of resources needed to support the public health infrastructure (3). As a result of these and other factors, rural communities face elevated rates of morbidity and mortality, as well as greater percentages of potentially excess deaths from the five leading causes of death, including cancer (4). Individuals in rural counties not only have an 8% higher overall cancer mortality than those in urban areas, but a rural–urban disparity in mortality has also been observed for lung, colorectal, prostate, and cervical cancers, although, in several cases, adjusting for socioeconomic status attenuates or completely explains the relationship between rurality and higher cancer mortality (5).

Additional rural–urban disparities across the cancer control continuum have been documented, although the existing literature is nascent and methodologically inconsistent compared with other research identifying race-, economic-, and age-based disparities in diagnosis, treatment, and survival of cancer (6). At least two studies have demonstrated that cervical cancer incidence is higher in rural areas (7, 8). There is also some evidence that rural residents are less likely to get screened for cancer (6): for example, an analysis of 2008 Behavioral Risk Factor Surveillance System data showed that rural women were less likely to meet recommendations for mammography than urban women, that the proportion of women reporting appropriate cervical cancer screening decreased as rurality increased, and that individuals from rural areas were less likely to report colorectal cancer screening than individuals from urban areas (9). Furthermore, rural individuals may be less likely to receive follow-up testing after receiving abnormal screening results (10), and although findings are not consistent with regard to rural–urban differences in stage at diagnosis, some research suggests that women from rural areas are more likely to be diagnosed with more advanced breast cancer compared with their urban counterparts (11).

Evidence also suggests that there are rural–urban differences in cancer treatment. For example, rural women are more likely to receive mastectomies than breast-conserving surgery, and rural patients with either endometrial cancer or prostate cancer are less

Invasive Cancer Incidence, 2004–2013, and Deaths, 2006–2015, in Nonmetropolitan and Metropolitan Counties — United States

Surveillance Summaries / July 7, 2017 / 66(14);1–13

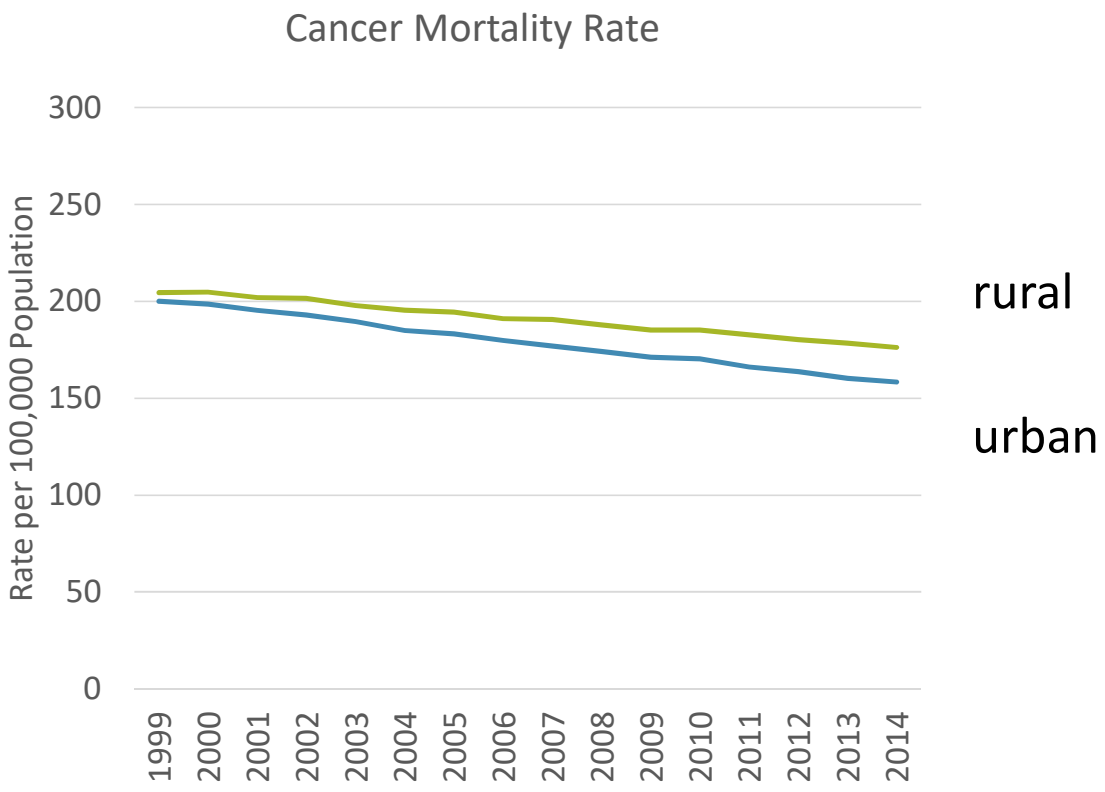
Abstract

Problem/Condition: Previous reports have shown that persons living in nonmetropolitan (rural or urban) areas in the United States have higher death rates from all cancers combined than persons living in metropolitan areas. Disparities might vary by cancer type and between occurrence and death from the disease. This report provides a comprehensive assessment of cancer incidence and deaths by cancer type in nonmetropolitan and metropolitan counties.

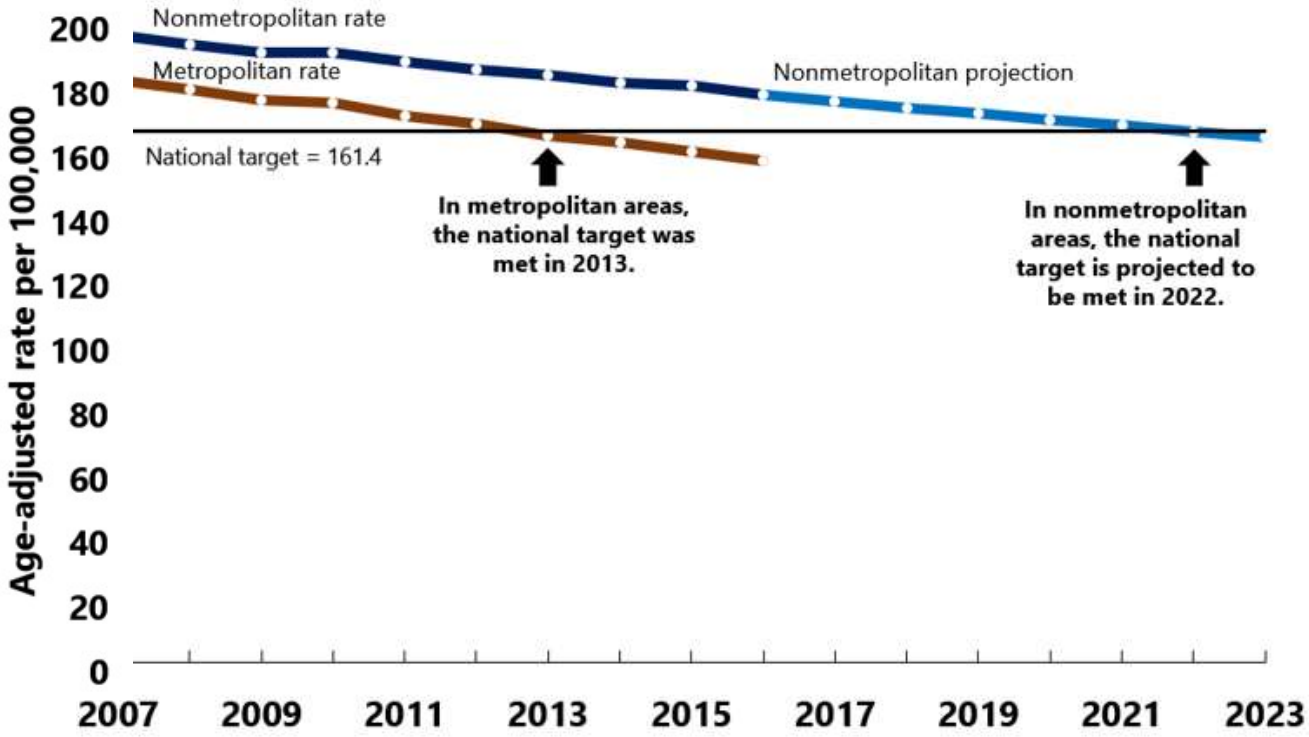
Reporting Period: 2004–2015.

As Mortality from Cancer Has Fallen, Rural-Urban Disparities Have Grown Larger



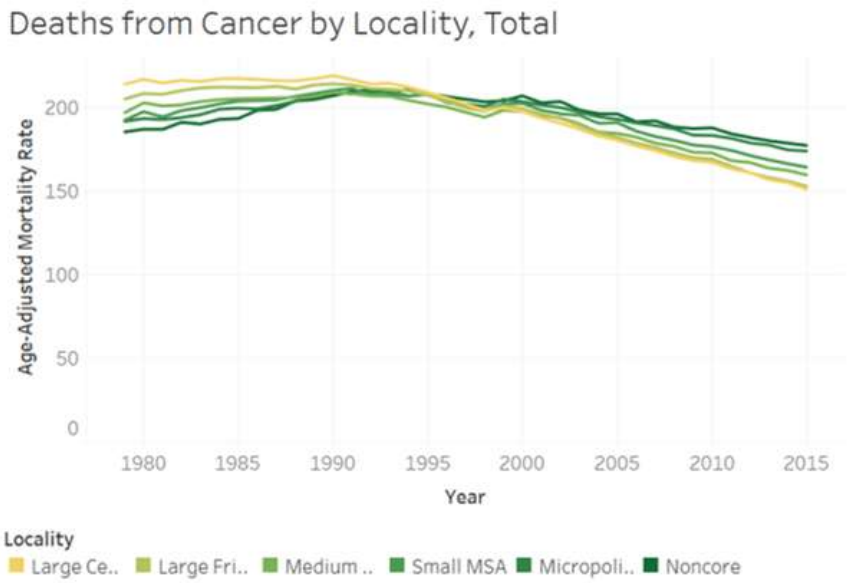
PRELIMINARY RESULTS

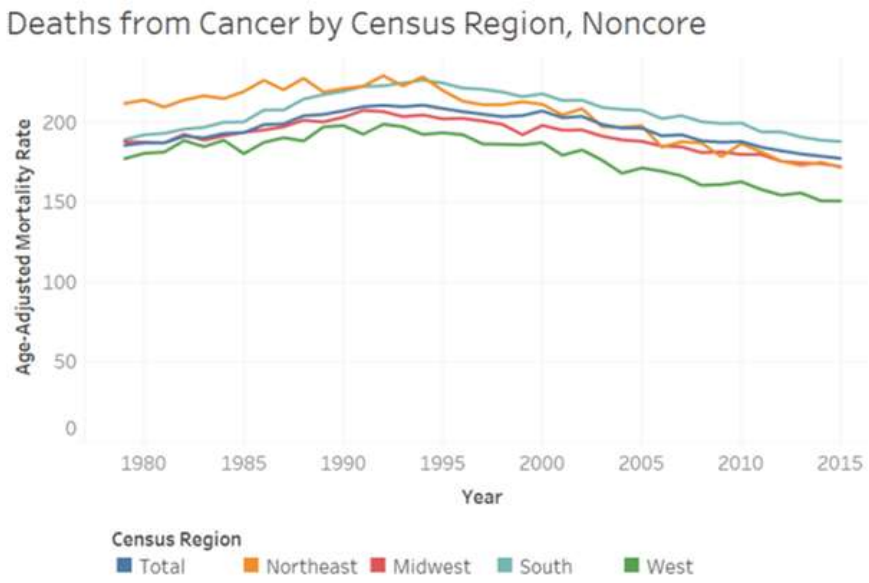
Healthy People 2020 objective C-1: Overall cancer deaths among persons of all ages — National Vital Statistics System, United States, 2007–2016



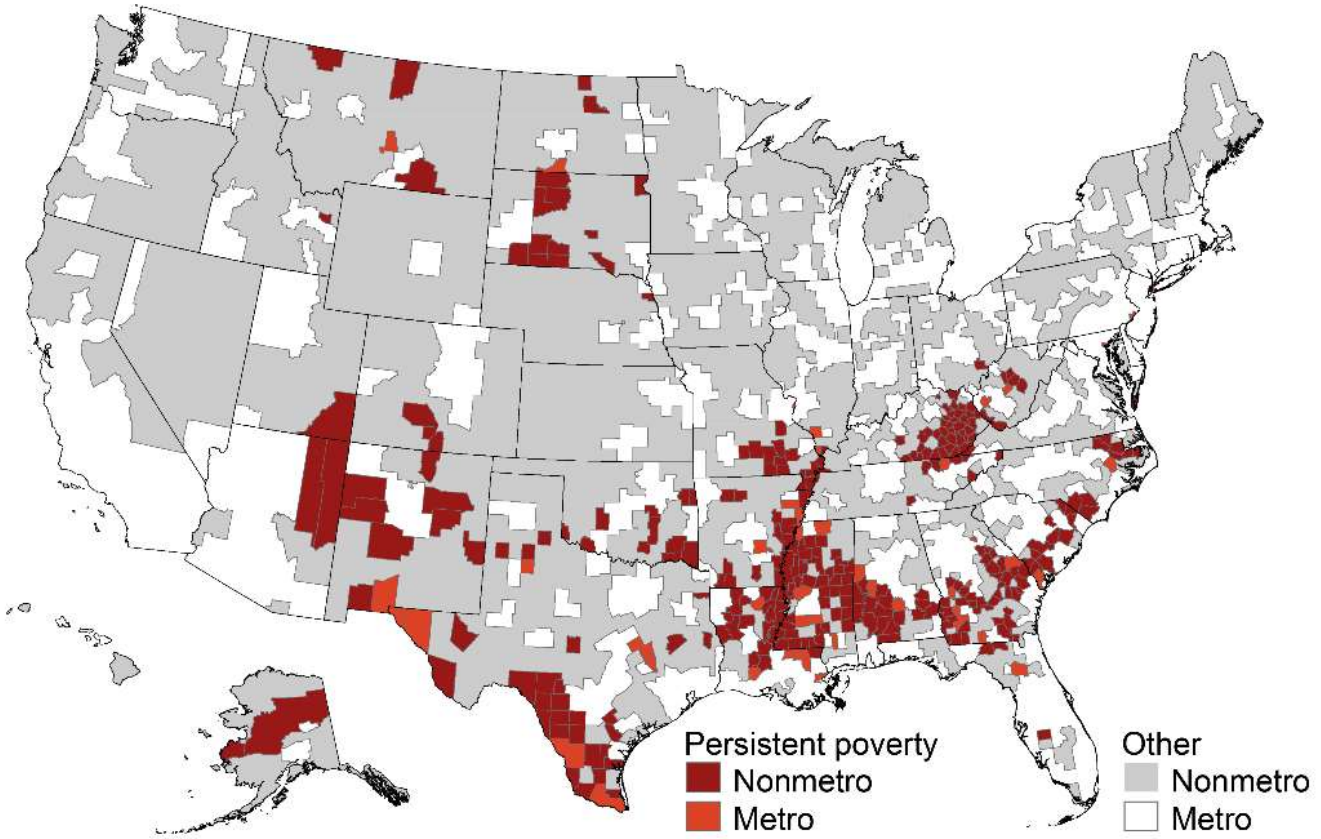
METHODS: The average annual percent change (AAPC) was calculated based on 2007–2016 mortality rates using the National Cancer Institute Joinpoint software. The nonmetropolitan trend was extended from the 2016 mortality rate until it crossed the target, assuming a constant AAPC.

Trends in Cancer Mortality by Locality and Within Rural Region ("Noncore")





Persistent poverty counties, 2015 edition



Persistent poverty counties are those where 20 percent or more of county residents were poor, measured by the 1980, 1990, 2000 censuses, and the 2007-11 American Community Survey.
Note that county boundaries are drawn for the persistent poverty counties only.
Source: USDA, Economic Research Service using data from U.S. Census Bureau.

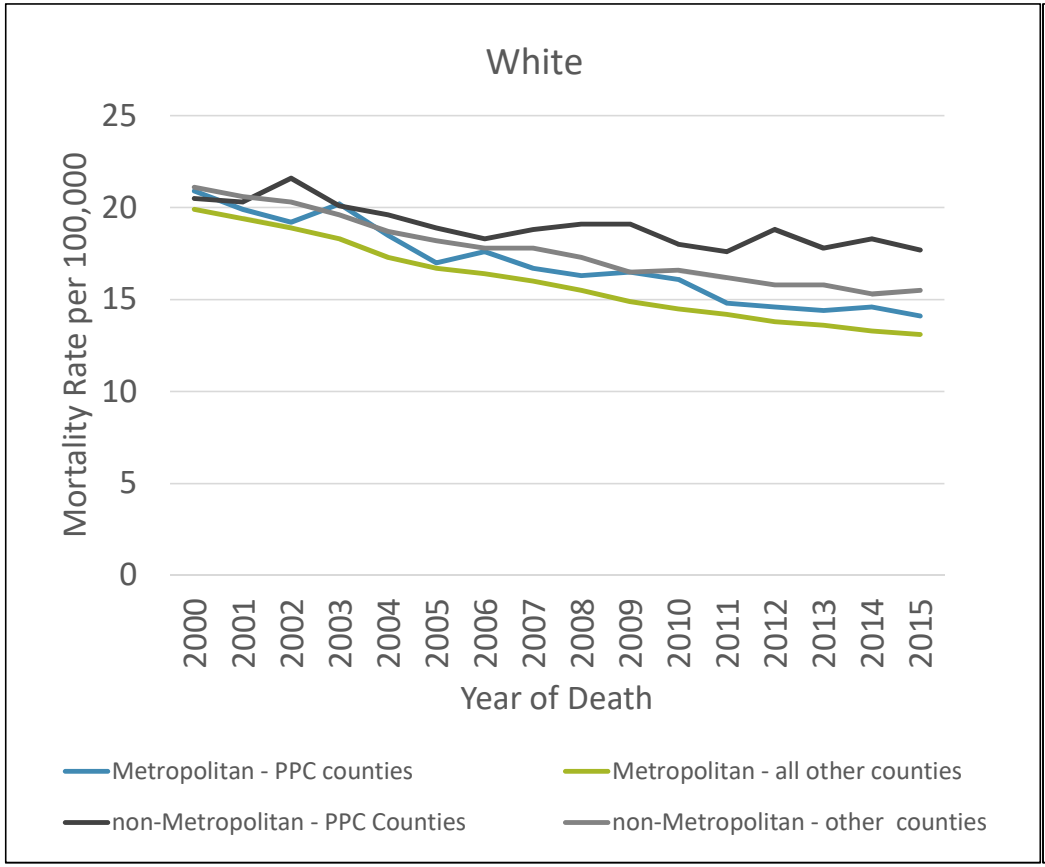
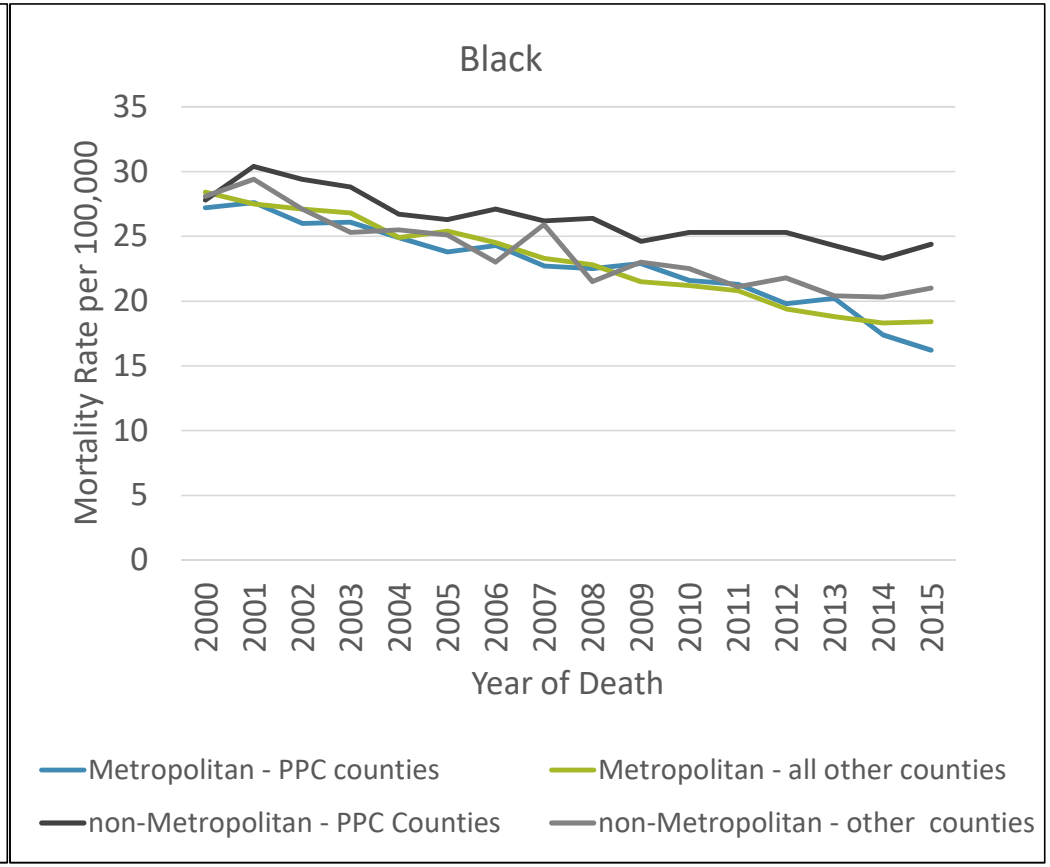
State Cancer Registries may provide more current or more local data.
Data presented on the State Cancer Profiles Web Site may differ from statistics reported by the State Cancer Registries (for more information).

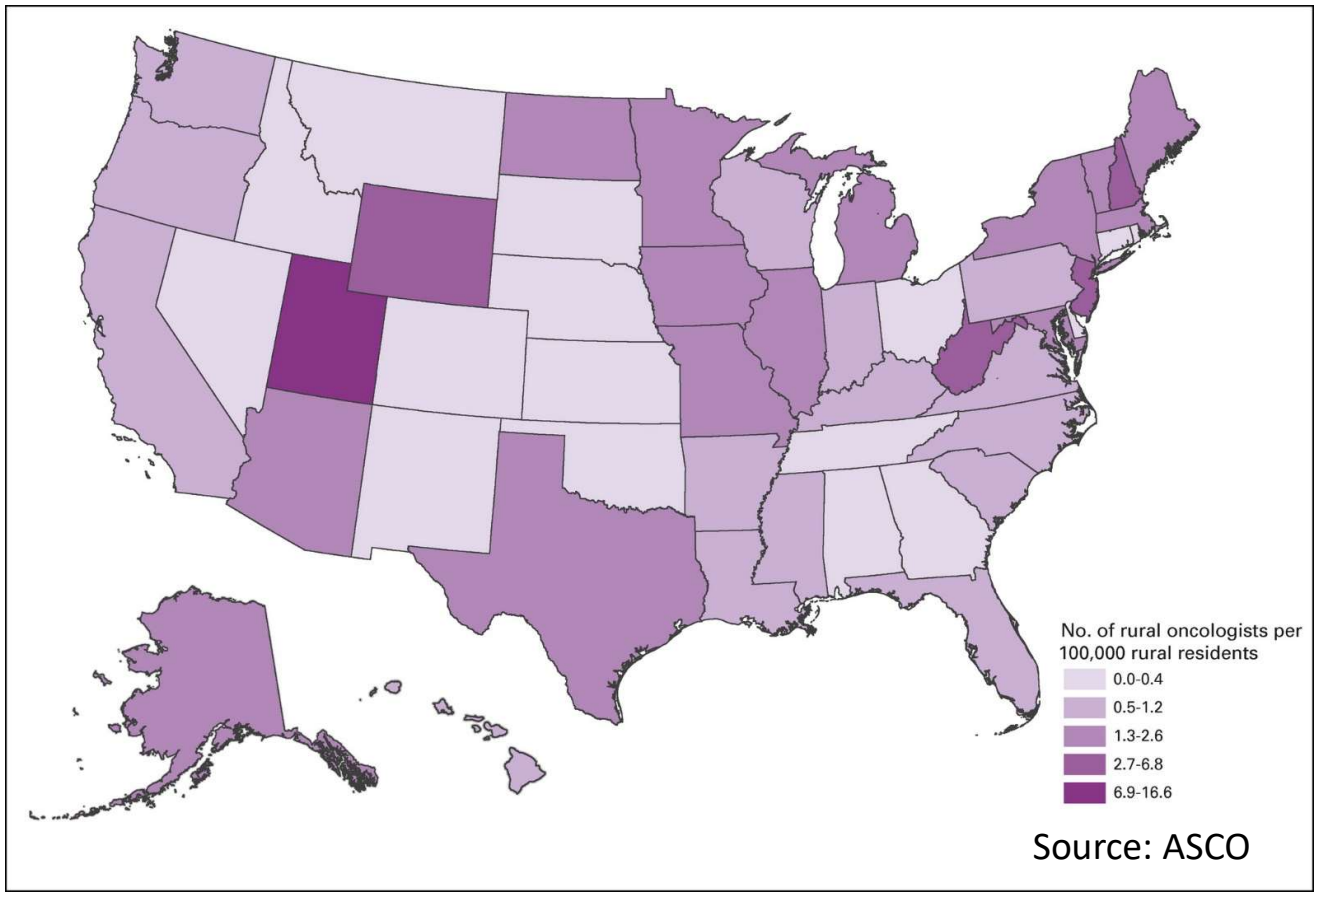
Colorectal Cancer Mortality
By Persistent Poverty Counties and Rural-Urban Continuum





Mortality data from NCHS- US population
Metropolitan, non-Metropolitan county classification based on 2013 Rural-Urban Continuum Code
PPC= Persistent Poverty Counties

Number of Rural Oncologists Per 100,000 Rural Residents



Source: ASCO

Scientific Challenges

Heterogeneity of "Rural"

- Example: rural Alaska vs. rural Mississippi
- "Grain size" of counties (and, therefore, data sources):
    - 3,142 total; Iowa has 99; Arizona has 15

Structural Factors that Affect both Research and Practice

- Access to care
- Limited access to clinical trials
- Lower physician density
- Distance to facilities – transportation
- Poor telecommunication infrastructure for telemedicine/telehealth
- SES and other area-level correlates and confounders

Cultural Factors

- Trust in institutions, medical providers, and government-sponsored programs
- Non-traditional comorbidities such as opiate drug use
- Cancer-related fatalism

NCI's Role as a Research Agency

- Leverage extensive research infrastructure (e.g. cancer registries), grant portfolio and scientific community
- Encourage more grant applications focused on rural populations
- Extend reach of clinical trials programs
- Engage NCI-funded cancer centers (n=70) in rural cancer control research (new community outreach and engagement requirement)
- Support partnerships and training in implementation science

NCTN Infrastructure

Selected Major NCTN Trials – Diverse Mix of Trials

≈ 19,000 enrolling patients/year
≈ 2,200 potential enrolling sites across North America (plus international sites)

- **Large Umbrella Trials with Screening & Assignment to Multiple Interventions Requiring a National Patient Catchment Area**
  - ADULT MATCH & PEDIATRIC MATCH (Target Therapies Across Histologies)
  - DART (Dual Immunotherapy in Rare Cancers)
  - LUNG MAP, ALCHEMIST (Target Therapies in Advanced & Early Stage Lung Ca)
- **Multimodality & Non-Drug Trials**
  - Role of Weight Loss in Treatment of Early Breast Ca
  - Dose-Escalated RT +/- ADT in Intermediate Prostate Ca
- **Combination Therapy Trials**
  - Cediranib & Olaparib in Recurrent Ovarian Ca
  - Chemo + Immunotx in Resected Stage III Colon Ca and Deficient DNA Mismatch Repair
  - Brentuximab Vedotin or Crizotinib with Chemotx for Newly Diagnosed ALCL

New Initiatives

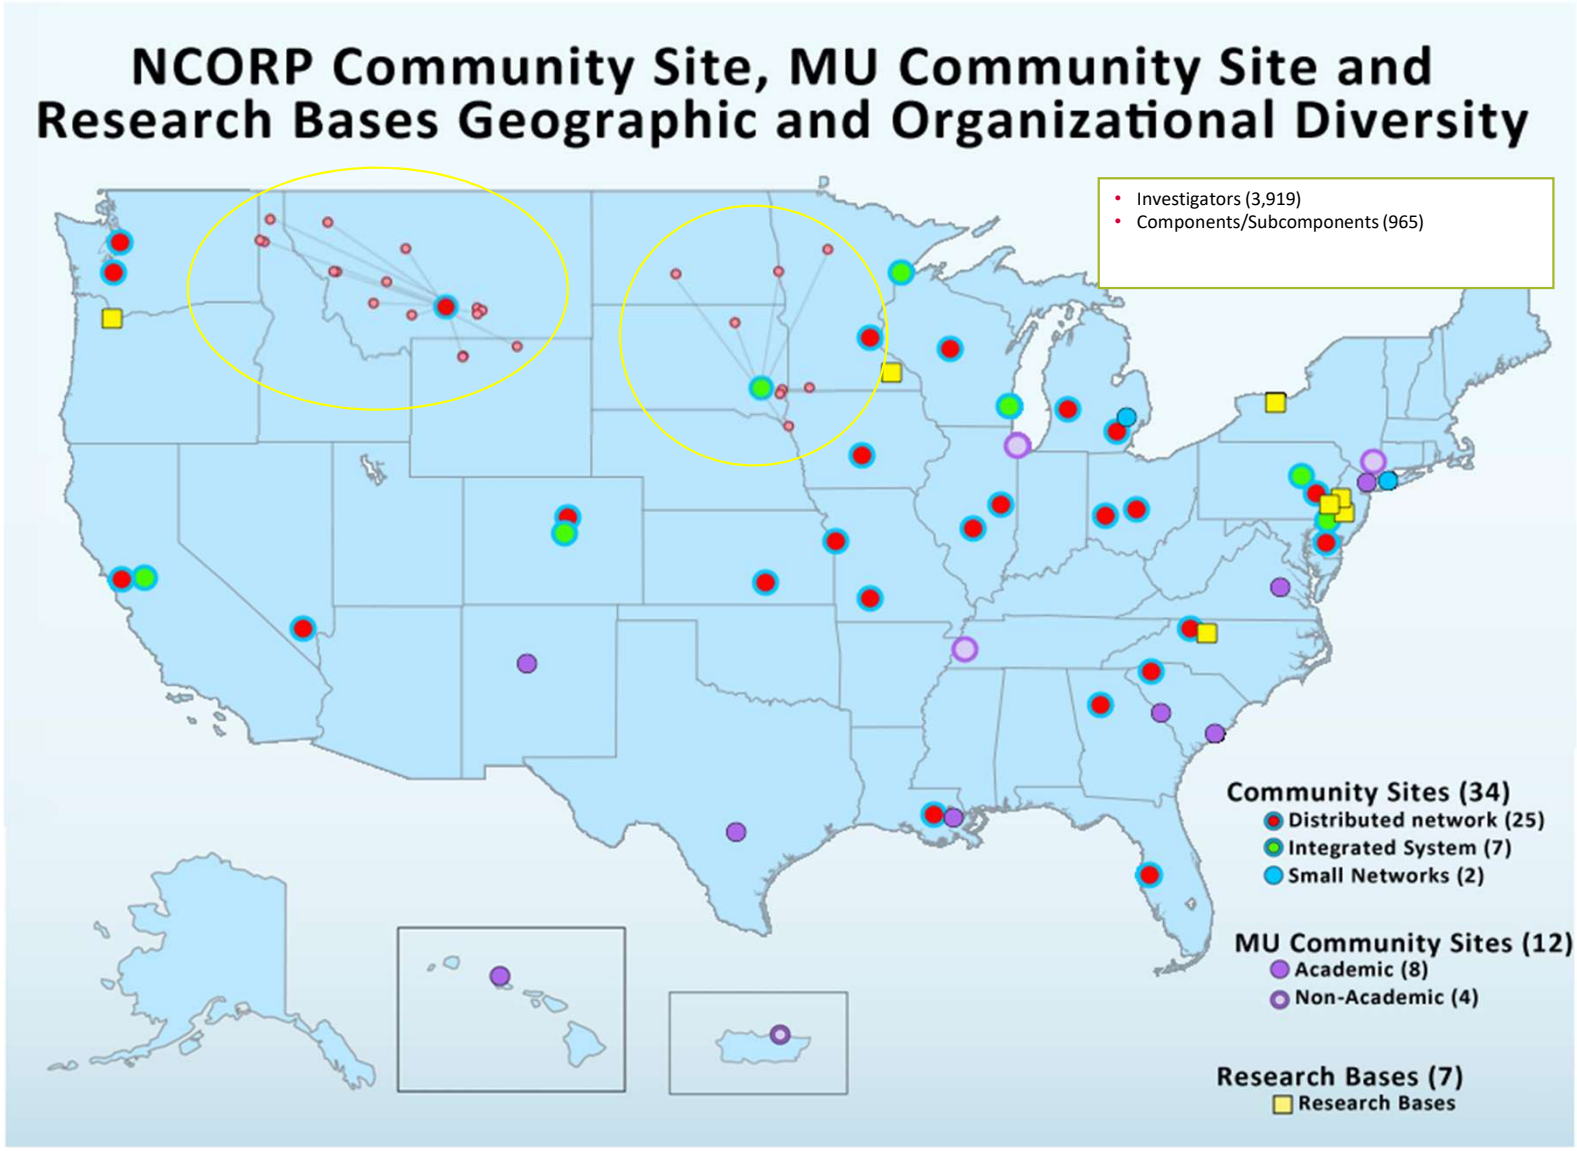
National Community Oncology Research Program (NCORP) Overview

- A national NCI-supported network that brings cancer prevention clinical trials and cancer care delivery research (CCDR) studies to local communities
  - designs and conducts cancer prevention, control, screening, and post-treatment surveillance clinical trials;
  - designs and conducts cancer care delivery research (CCDR) studies;
  - participates in treatment and imaging clinical trials conducted by the NCI National Clinical Trials Network (NCTN); and
  - integrates health disparity questions into its research priorities.

NCORP Community Site, MU Community Site and Research Bases Geographic and Organizational Diversity



RURAL CANCER CONTROL RESEARCH

Rural Cancer Control

Improving the Reach and Quality of Cancer Care in Rural Populations (R01 Clinical Trial Required)
RFA-CA-18-026

- To support observational/analytic research and pilot testing of interventions to identify, understand, and address predictors of low quality of cancer care in rural low-income and/or underserved populations
- To support cancer control intervention research to address known predictors of low quality of care (e.g., low reach due to distance) in rural low-income and/or underserved populations
- All studies will be required to employ the USDA's Rural Urban Continuum Code (RUCC) to define nonmetropolitan geographic target areas of study
- To be awarded in FY19 (summer 2019)

Connected Health: Improving Patients' Engagement and Activation for Cancer-Related Health Outcomes

President's Cancer Panel
2014-2015 Series

The power and utility of connected health technologies are growing. Many forces are catalyzing a national U.S. effort to engage and activate individuals to be more proactive about their health and healthcare and to translate this engagement to enhanced activation among patients. These forces have important implications for the prevention and treatment of cancer and for optimal survivorship. They include but are not limited to:

- **"Meaningful Use"** incentives to healthcare providers focus on requirements to demonstrate "patient engagement" through health information technology (Phases 2 & 3).
- **The "Quantified Self"** movement is creating new tools to encourage and reinforce a variety of healthy behaviors relevant to cancer control.
- **The Internet** has made vast amounts of health information available, and social media platforms have

A patient with a complex chronic condition receives a prescription for an app that is downloaded to a mobile device. Using information the patient enters, the app delivers automated clinical coaching and sends reports to the physician, recommending evidence-based protocols for adjusting the patient's treatment regimen, if needed. Equipped with a tool that offers personal, relevant

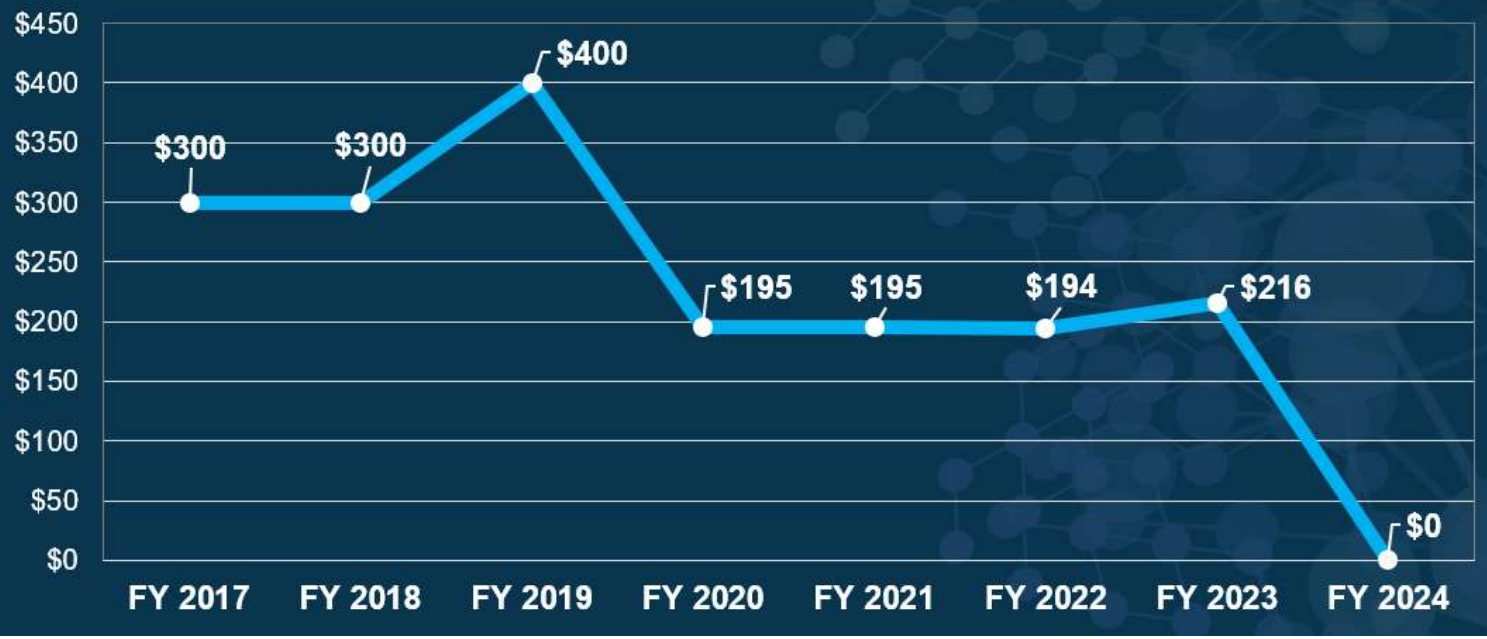
Linking and Amplifying User-Centered Networks through Connected Health (L.A.U.N.C.H.)

- NCI has partnered with the Federal Communications Commission to address the broadband health connectivity gap in rural areas of the U.S.
- The long-term goal of this partnership is to improve cancer outcomes by better connecting rural patients to their cancer care teams.
  - Pilot Demonstration Project: University of California at San Diego, the University of Kentucky, and the biopharmaceutical company Amgen to redesign access to care using biosensors, smartphones, patient-reported outcomes

NCI Appropriations
FY 2013 – 2020 (in millions)

21st Century Cures Act – orange
Childhood Cancer Initiative - green

Cancer Moonshot Funding Authorized Under the 21st Century Cures Act (dollars in millions)



Cancer Center Cessation Initiative (C3I)

"Administrative supplements to develop tobacco cessation treatment capacity and infrastructure for cancer patients that should lead to the implementation and dissemination of a sustainable tobacco cessation treatment program within the cancer center."

NIH NATIONAL CANCER INSTITUTE

C3I Coordinating Center
Carbone Cancer Center
UNIVERSITY OF WISCONSIN
SCHOOL OF MEDICINE AND PUBLIC HEALTH

- NCI Lead: **Stephanie Land**
- Natural laboratory for understanding implementation of tobacco cessation within cancer center care delivery
- Capturing data on Implementation strategies used to integrate cessation services

Coordinating Center: University of Wisconsin Madison (Lead: Michael Fiore)

DCCPS Cancer Moonshot Initiatives – with a focus on rural health

- Accelerating Colorectal Cancer Screening and follow-up through Implementation Science (ACCSIS) –
  - to generate effective implementation strategies that substantially improve CRC screening and follow-up rates in populations where baseline rates remain low
  - Funded 3 research grants and 1 coordinating center in FY18 (see next slide for details)
  - Plans to fund more research centers in FY19.

- Improving CRC Screening for American Indian populations –
  - FY18 funding to allow three cancer centers to build partnerships, procure tribal support; get tribal and Indian Health Service IRB approvals; and pilot test CRC implementation processes in each state
  - Funding planned for FY19 and 3 additional years.
  - University of New Mexico Cancer Center, University of Arizona Cancer Center, Stephenson Cancer Center at University of Oklahoma

ACCSIS Projects

- ***ACCSIS-Chicago (*1 UG3 CA233220); Karen Kim, Blase Polite, U Chicago**

Investigators propose to study the effectiveness of a multilevel intervention to improve CRC incidence and mortality **among at-risk populations in safety-net clinics** in Cook County, Chicago, Illinois. Multi-level intervention includes provider education; community outreach; provider reminder, assessment, & feedback system; patient navigation.

- ***ACCSIS in Appalachia (*1 UG3 CA233282); Mark Dignan, U Ky; Electra Paskett, OSU**

Investigators propose to examine the impact of a multilevel intervention on improving CRC outcomes among **Appalachian populations** in Kentucky and Ohio. The intervention will consist of academic detailing, patient activation to include distribution of fecal immunochemical tests kits, and social support via a patient navigator.

- ***Scaling Colorectal Cancer Screening Through Outreach, Referral, and Engagement (SCORE): A State-Level Program to Reduce Colorectal Cancer Burden in Vulnerable Populations (*1 UG3 CA233251); Daniel Reuland, UNC-Chapel Hill**

Investigators propose to assess the effectiveness of a multilevel intervention to improve CRC outcomes among **low-income and racial and ethnic minority populations in North Carolina**. The intervention will consist of a centralized colorectal cancer screening registry, distribution of fecal immunochemical test kits, patient navigation, an in-clinic patient decision aid, and establishing a colonoscopy access network.

Implementation Science Centers for Cancer Control

- **NCI Leads: Cynthia Vinson and April Oh**
- **RFAs-CA-19-005/6 (P50): Currently in Scientific Review**
  - "Scaling Up Implementation Science in Cancer"
  - Advanced Ctrs in established areas (Cancer Prevention, Screening, Symptom Mgmt)
  - Developing Ctrs in newer areas (precision medicine, de-implementation)
  - Centers will include:
    - Implementation "Laboratories"
    - Methods and Measure Development
    - Rapid and Iterative Pilot Implementation Studies
    - Common Data Repositories
  - Added Goal: Build a Field-wide IS Consortium (Moonshot and beyond)

Upcoming: Pilot of IS Consortium Meeting (@NCI, July 2019)

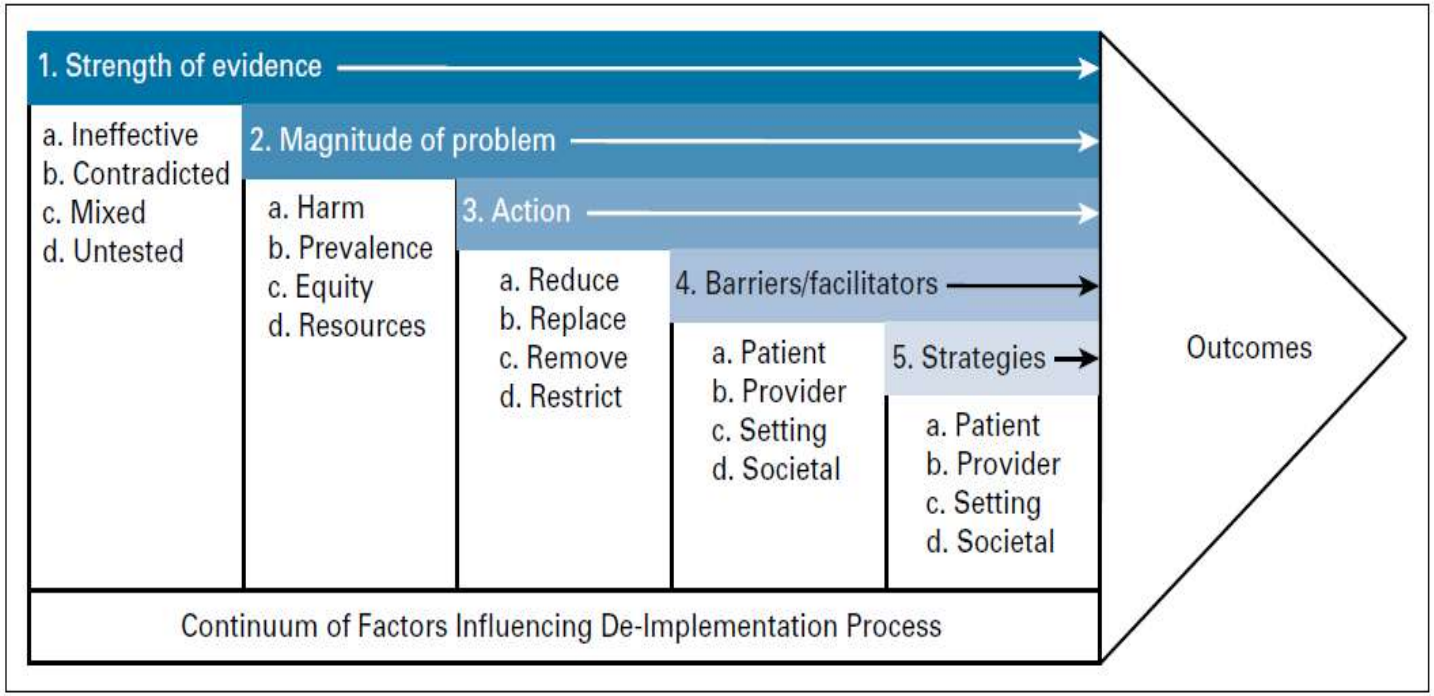
Advancing De-Implementation



Norton, Chambers, & Kramer, 2018

IMPACT:

Improving the Management of Symptoms During and Following Cancer Treatment (UM1, U24)

RFA-CA-17-042
RFA-CA-17-043

Ashley Wilder Smith, PhD, MPH
On behalf of the IMPACT Team

September 12, 2018

NIH NATIONAL CANCER INSTITUTE

Cancer Moonshot^{SM} Initiative

RECOMMENDATION F:
Minimize cancer treatment's debilitating side effects
Accelerate the clinical adoption of integrated systems to monitor patient-reported symptoms and provide decision support using implementation science approaches and evidence-based symptom management guidelines

https://www.cancer.gov/research/key-initiatives/moonshot-cancer-initiative

Goals of the Companion RFAs

Create a Research Consortium to:

- Develop scalable, transferable, and sustainable symptom management systems to monitor and address common cancer symptoms
- Rigorously examine impact on symptom control, functioning, treatment delivery, and healthcare utilization
- Using consortium-wide data, evaluate effects across:
  - Symptoms
  - Cancer continuum
  - Minority and medically underserved populations
- Produce findings and materials for wider implementation

Cancer Epidemiology, Biomarkers & Prevention

The National Cancer Institute Cohort Consortium: An International Pooling Collaboration of 58 Cohorts from 20 Countries

Anthony J. Swerdlow[1,2], Chinonye E. Harvey[3], Roger L. Milne[4,5], Camille A. Pottinger[3], Celine M. Vachon[6,7], Lynne R. Wilkens[8], Susan M. Gapstur[9], Mattias Johansson[10], Elisabete Weiderpass[11,12,13,14], and Deborah M. Winn[3]

Abstract

Cohort studies have been central to the establishment of the known causes of cancer. To dissect cancer etiology in more detail—for instance, for personalized risk prediction and prevention, assessment of risks of subtypes of cancer, and assessment of small elevations in risk—there is a need for analyses of far larger cohort datasets than available in individual existing studies. To address these challenges, the NCI Cohort Consortium was founded in 2001. It brings together 58 cancer epidemiology cohorts from 20 countries to undertake large-scale pooling research. The cohorts in aggregate include over nine million study participants, with biospecimens available for about two million of these. Research in the Consortium is undertaken by >40 working groups focused on specific cancer sites, exposures, or other research areas. More than 180 publications have resulted from the Consortium, mainly on genetic and other cancer epidemiology, with high citation rates. This article describes the foundation of the Consortium; its structure, governance, and methods of working; the participating cohorts; publications; and opportunities. The Consortium welcomes new members with cancer-oriented cohorts of 10,000 or more participants and an interest in collaborative research.

Alcohol and Cancer

- Period of renewed focus on alcohol as a target for cancer prevention and control
- Key research challenges include
  - Knowledge and awareness
  - Patient-provider communications
  - Effects of alcohol consumption on treatment and recurrence
  - Evaluation of natural experiments in alcohol policy
- Creation of further resources and opportunities
  - Promoting existing funding opportunities
- Expanding this research community

Population-attributable risk of lifestyle factors for cancer mortality

Song & Giovannucci

(JAMA Oncology, 2016)

- "Healthy lifestyle":
  - non-smoking, normal BMI, low alcohol, physically active

- Women: 48%
- Men: 44%

Challenge and Opportunity: Rapidly Increasing Numbers of Cancer Survivors

Maine Rural Site #1: Norway

Community Engaged Research:

- Meeting held with community members and Western Maine Health clinicians on March 26, 2019.
- Topic of Adverse Childhood Experiences (ACEs) were discussed, including how to work on research that will complement and enhance current community/clinical activities.
- The research question has been narrowed to two potential areas:
  - What community assets exist and how can they be used in clinical care for referrals? What impact will they have on health outcomes?
  - What are baseline attitudes of teachers and other school staff about ACE's and how are those modified by training in trauma-informed approaches?
- An additional teleconference will be held in July to choose a research question and to begin to develop a research proposal.

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Maine Rural Site #1: Norway

Clinical research supported by Rural Research Navigator:

- Integrated Medication Assisted Therapy: measuring the impact on utilization of the local emergency department
- A Pilot Study of NOHA as a monitoring biomarker in triple negative breast cancer (PI: MMCRI)
- A Pilot Study of NOHA levels in BRCA positive Breast Cancer (PI: MMCRI)
- Screening for Adverse Childhood Experiences in adult internal medicine (PI: Dartmouth COOP)

Continued partnership with community organization:

- Ongoing discussions with Healthy Oxford Hills about the feasibility of a community asset mapping program, which could serve as a future resource for research about linking patients with social needs to appropriate community resources.
- Continued learning about community asset mapping and referral platforms in conjunction with community and statewide partners.

NORTHERN NEW ENGLAND

Upcoming training activities in Maine

- Community engagement tracking and outcome measurement workshop facilitated by the Institute for Community Health was held **May 22-23** in Portland, Maine, and included members from the Tracking & Evaluation and Rural Cores.

- Boot Camp Translation (BCT) is an evidence-based approach to translating guidelines and recommendations into language meaningful to patients and community members, to facilitate their involvement in research.
  - 3-day BCT Facilitator training **June 12-14** in South Portland, Maine.
  - Participants: community partners (Norway and Rockport); Dartmouth COOP Research Network, staff from the Maine Health community health improvement department; Vermont NNE-CTR Rural Core.

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Plans for Next 6 to 12 Months

1. Maximize effective community engagement
2. Complete the Identification of Barriers and Facilitators to Engagement in Health Research in Rural Vermont and Maine research studies
3. Continue to develop projects in Vermont and Maine, linking rural practices to the NNE-CTR Pilot Project Program and other relevant funding sources
4. Multilayer Rural Engagement Strategy
   - Continue ad hoc identification and practice visits
   - Participate in network Addiction and Cancer Working Groups
   - Engage with new and existing community groups to develop research ideas and priorities
   - Utilize relationships with Dartmouth COOP PBRN
5. Compile information on potential additional research funding sources, (eg. Foundations and other government agencies)
6. Developing NNE-Center for Rural Health & Cancer – will coordinate and catalyze efforts in Vermont, New Hampshire, and Maine
7. Ongoing consultation and collaboration with other NNE-CTR cores

Cancer Related Risk Factors & Behaviors

Cancer County Fact Sheets

Cancer Related Risk Factors and Preventive Behaviors

Chittenden County rates for adult smoking, adult obesity (ages 20+), and youth sunburn (grades 9-12) are better than Vermont overall. The percentages of males and females ages 13-17 who are up-to-date on HPV vaccination recommendations are also better in Chittenden County than Vermont overall.

	Percent		
	Chittenden	Vermont	Goal Type[G]
Smoke Cigarettes, Currently (Adults)*	13	18	HV, SCP
Obesity (Ages 20+)*[D]	20	28	HV, SCP
Sunburn, Past 12 Months (Youth, Grades 9-12)	63	65	SCP
Adolescent Females who are up-to-date for HPV Vaccination (Ages 13-17) ◆ [D]	67	60	SCP
Adolescent Males who are up-to-date for HPV Vaccination (Ages 13-17) ◆ [D]	60	51	SCP

Data Sources: Smoking, Obesity: BRFSS; County: 2015-2016, State: 2016. Youth Tanning: YRBS, 2015. HPV vaccination: IMR, 2016.

Technical Notes

Indicates statistically worse[D] than Vermont.	
Indicates statistically better[D] than Vermont.	

*Age adjusted to U.S. 2000 population.

† Due to a difference in how the cervical cancer questions were asked in 2016††, comparisons over time cannot be made.

†† Usually women who have had a hysterectomy are excluded from cervical cancer screening calculations. In 2016, women 45-65 were not asked whether they've had a hysterectomy, and as such the proportion meeting Pap test screening recommendations is underestimated.

‡ Rates based on 5 or fewer cases are not individually calculated.

◆ *New or changed Vermont State Cancer Plan Goal*

Data Sources:

BRFSS: Behavioral Risk Factor Surveillance System
VCR: Vermont Cancer Registry
YRBS: Youth Risk Behavior Survey
IMR: Immunization Registry

Aim 2: To develop educational programs to enhance research competency.

- Developed UVM/UVM Medical Center Research Professionals Network
- Partnered with BU/BMC to deliver the Research Professionals Network Workshop Series at UVM. Academic Year 18-19 workshops include:

2018-2019 RPN Workshop Series with Boston University

Date	Topic	Presenter	Level
September 18, 2018	Why Do We Need IRB review?	Melanie Locher, BS, CIP (UVM)	Fundamental
October 16, 2018	Single IRB and Reliance Agreements	Kim Luebbers, MSHS, RN, BSN, OCN (UVM), Matthew Ogrodnik, MS, CIP (BU), and Donna Silver, CIP (UVM)	Fundamental
November 27, 2018	Research Design and Data Analysis	Abby Crocker, MS, PhD (UVM), Sarah Qin, MBA (BMC), and Nellie Shippen (BMC)	Fundamental
December 17, 2018	Developing Effective Data Collection Tools	Alana Ewen, MPH (BMC)	Fundamental
January 24, 2019	Having Difficult Conversations/Words Matter	Alix Rubio (BMC), Nellie Shippen (BMC), and Emily Tarleton, PhD, RD (UVM)	Advanced
February 4, 2019	UVM Only – Common Rule Changes and Click Tips & Tricks	Melanie Locher, BS, CIP and Kim Luebbers, MSHS, RN, BSN, OCN (UVM)	Fundamental
February 20, 2019	ClinicalTrials.gov	Karla Damus, MSPH, MN, BSN, RN, FAAN (BU)	Advanced
March 19, 2019	Protocol Compliance	Michelle St. Paul, MA (BU)	Fundamental
April 24, 2019	SOP Development	Jessica Howard, MPH, MA (BU) and Kimberly Parker, MS (BMC)	Advanced
May 23, 2019	Preparing for an FDA Audit/Audit Preparedness	Thomas Cheng, MS (BU) and Eric Stratton, MPH (BU)	Fundamental
June 18, 2019	Developing Effective Corrective and Preventative Action Plans (CPAs)	Mary-Tara Roth, RN, MSN, MPH (BU)	Advanced
July 18, 2019	Drugs/Devices (IND/IDE)	Ross Colgate, Ph.D., MPH (UVM)	Advanced

- Partnered with Vanderbilt University for their "G*etting Started in Sponsored Research*" webinar series.

Professional Development Core Milestones and Timeline

Common Milestones	Y1	Y2	Y3	Y4	Y5
Organize PDCCC and prioritize tasks	√				
Establish communication channels across institutions and cores	√				
Develop/maintain inventories of faculty, trainees, and educational offerings	√	√	√	√	√
Develop/maintain relational, searchable database	√	√	√	√	√
Develop algorithms to assist in organizing research & mentoring teams	√				
Perform initial and periodic needs assessments of educational offerings	√	√	√	√	√
Develop standard curriculum for commonly encountered educational needs	√				
Aim 1 Milestone					
Support development of multi-disciplinary T1 translational research teams	√	√	√	√	√
Aim 2 Milestone					
Identify and support engagement of clinicians in research activities	√	√	√	√	√
Aim 3 Milestone					
Identify mentees and support development of team-based mentoring model	√	√	√	√	√
Aim 4 Milestones					
Refine curriculum tracks for training T1 and T2/T3/T4 research catalysts	√				
Develop needed unique course offerings for certificate program	√	√	√		
Publicize availability of the program and recruit students		√	√	√	√

Completed or nearing completion Underway Not yet started

Direct and indirect mechanisms of opioid-induced bone loss

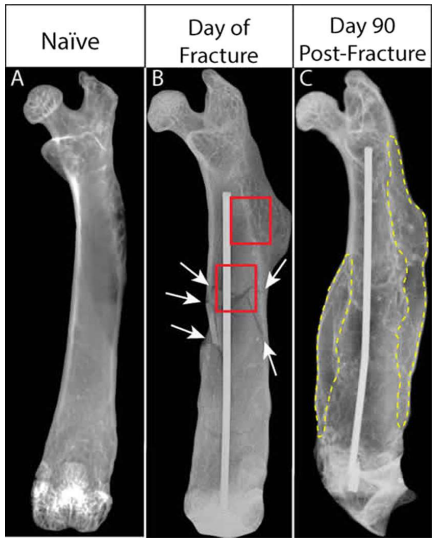
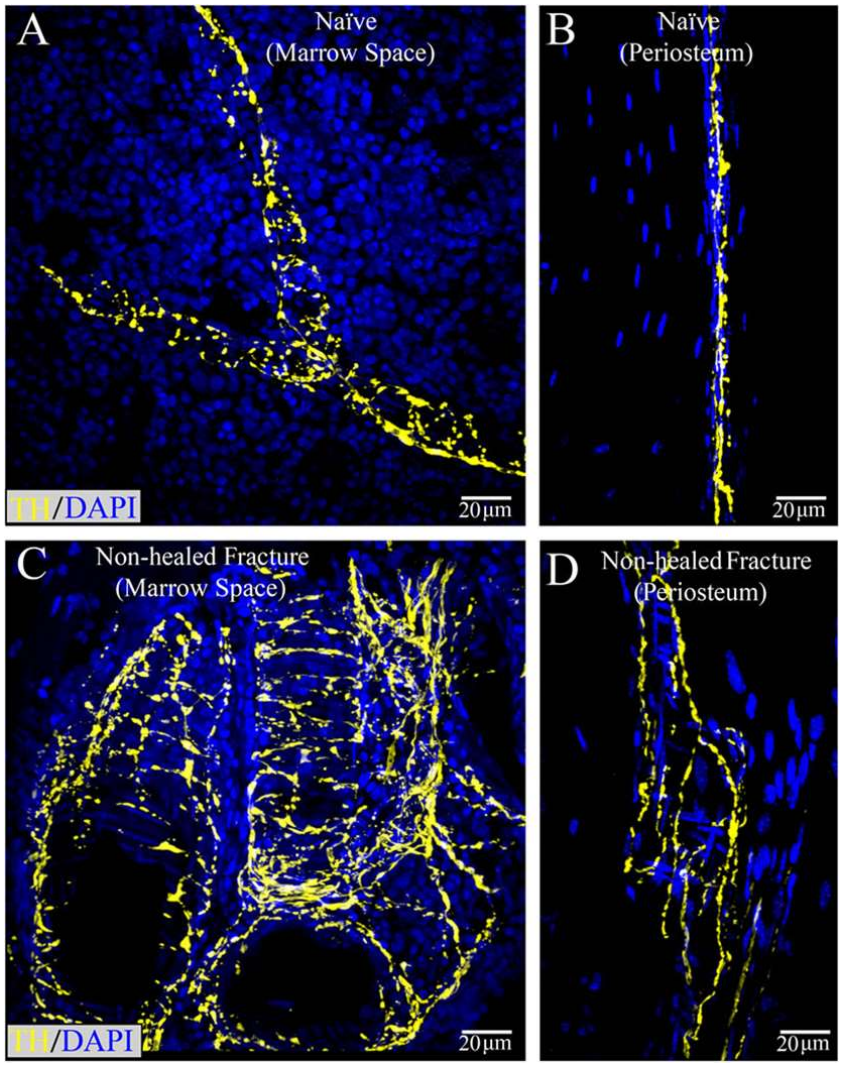
Fracture

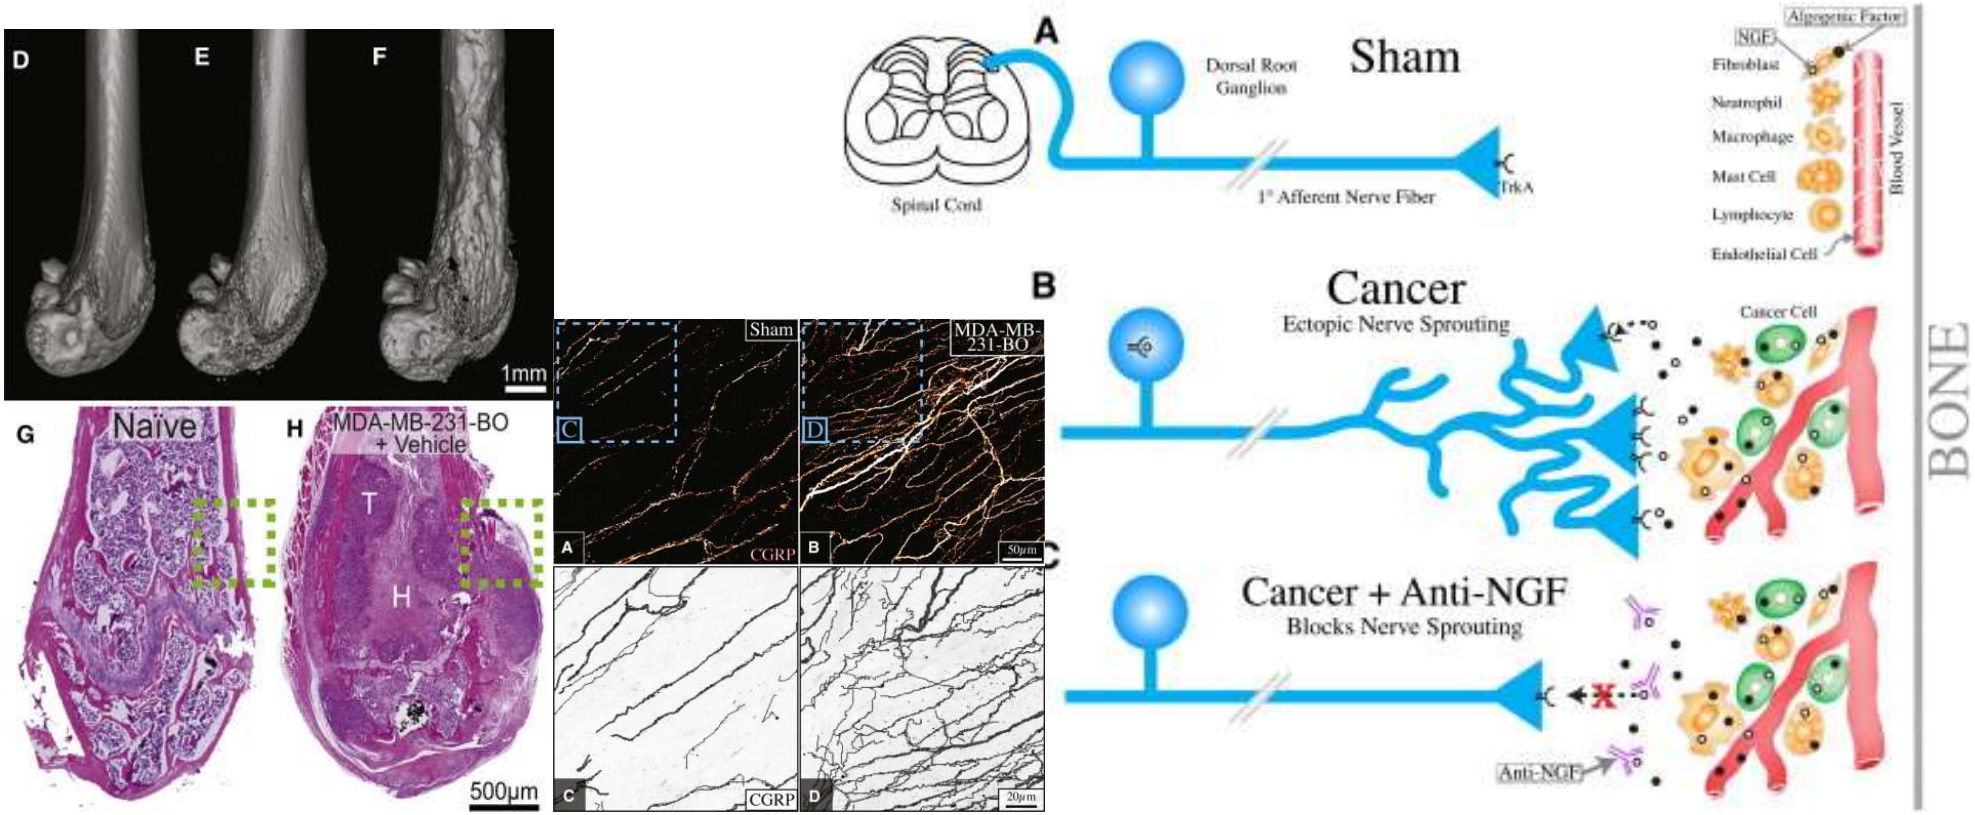
- Nonhealed fracture associated with sprouting of sensory and sympathetic nerves
- Anti-NGF therapy can reduce fracture pain





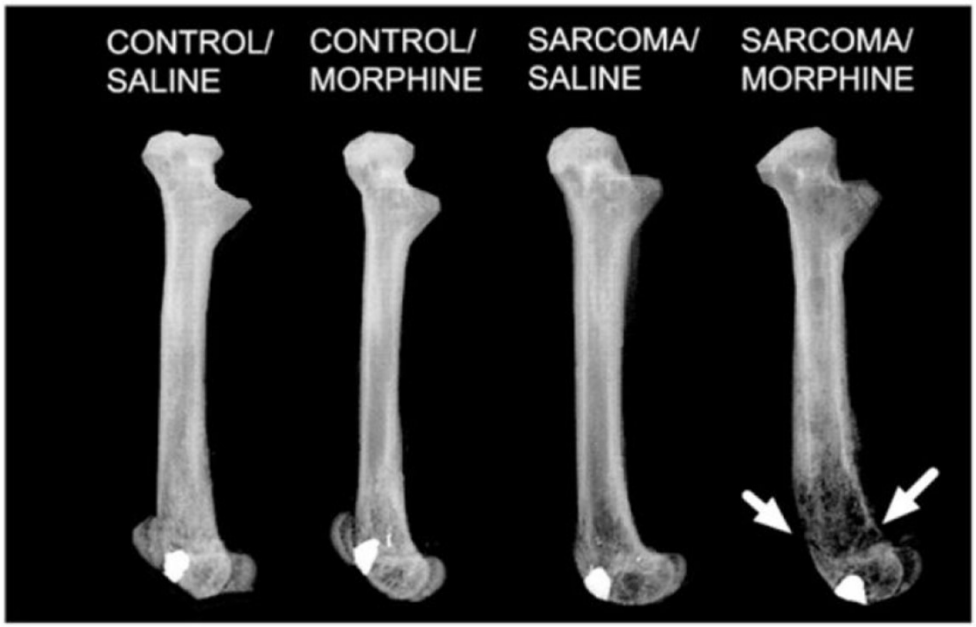
Pain. 2014 Nov;155(11):2323-36.

Breast Cancer Metastases Cause Nerve Sprouting



Bloom, et al. 2011. Journal of Pain. 12(6).

Cancer-induced bone loss exacerbated by morphine



Pain. 2007 November ; 132(1-2): 154–168.

WHAT ARE OPIOIDS?

Opioids is a term used for the entire family of opiate drugs, including natural, synthetic and semi-synthetic.

These drugs are chemically related and interact with opioid receptors on nerve cells in the body and brain.

OPIOID DRUGS INCLUDE:

- **Heroin**
- **Buprenorphine**
- **Codeine**
- **Fentanyl**
- **Hydrocodone**
- **Hydromorphone**
- **Meperidine**
- **Methadone**
- **Morphine**
- **Oxycodone**

https://www.cdc.gov/drugoverdose/opioids

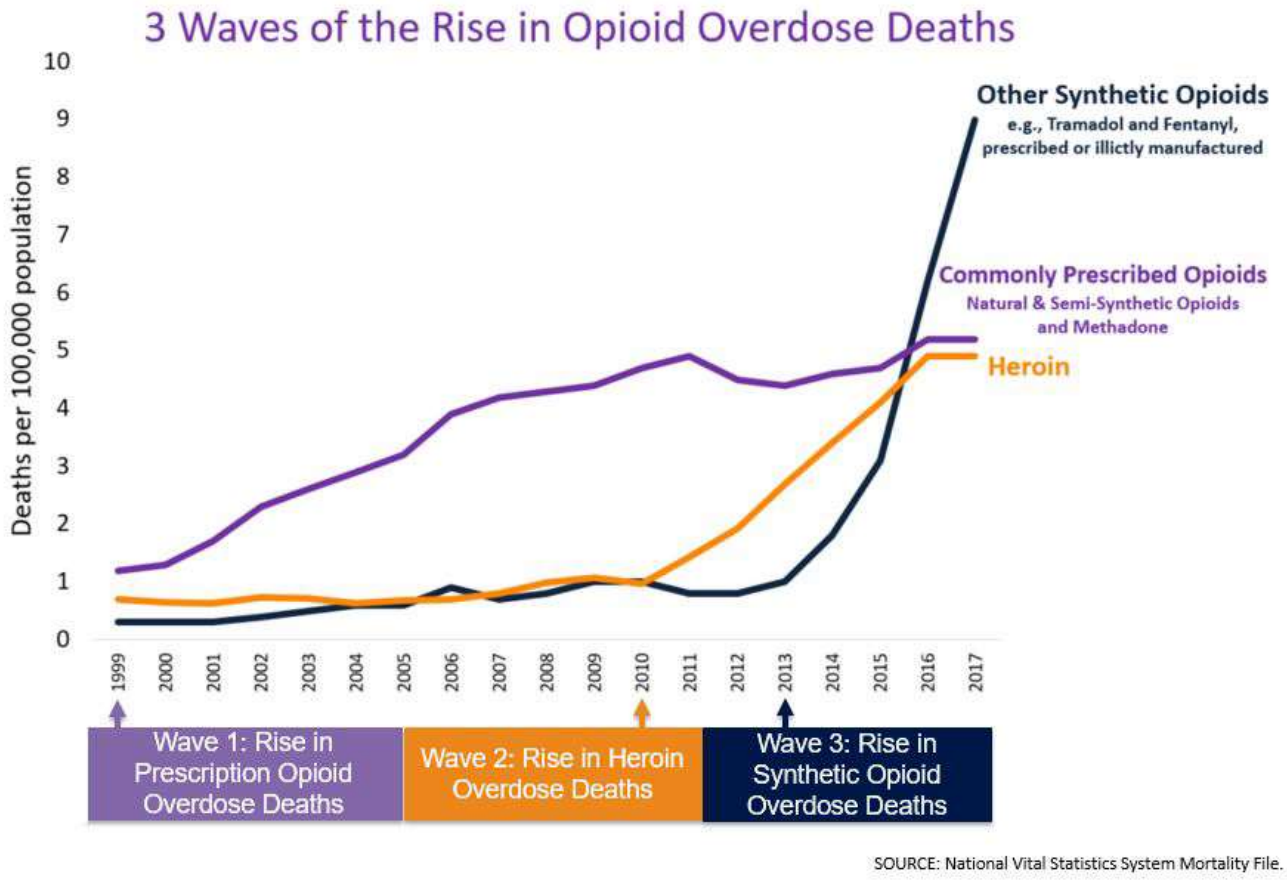
Morphine

- Morphine is derived from opium and was first isolated between 1805 and 1816 by a pharmacist's assistant Friedrich Wilhelm Serturner, who named it after the Greek God of dreams, Morpheus.
- Began being used clinically in the mid-1850s for pain and to treat opium addiction, but itself is addicting.
- In the 1980s, WHO guideline officially included morphine administration for cancer pain treatment.
- Current clinical uses: MI, bone and joint pain from sickle cell crisis, pain relief before, during and after surgery.

Opium poppy plant
Papaver somniferum

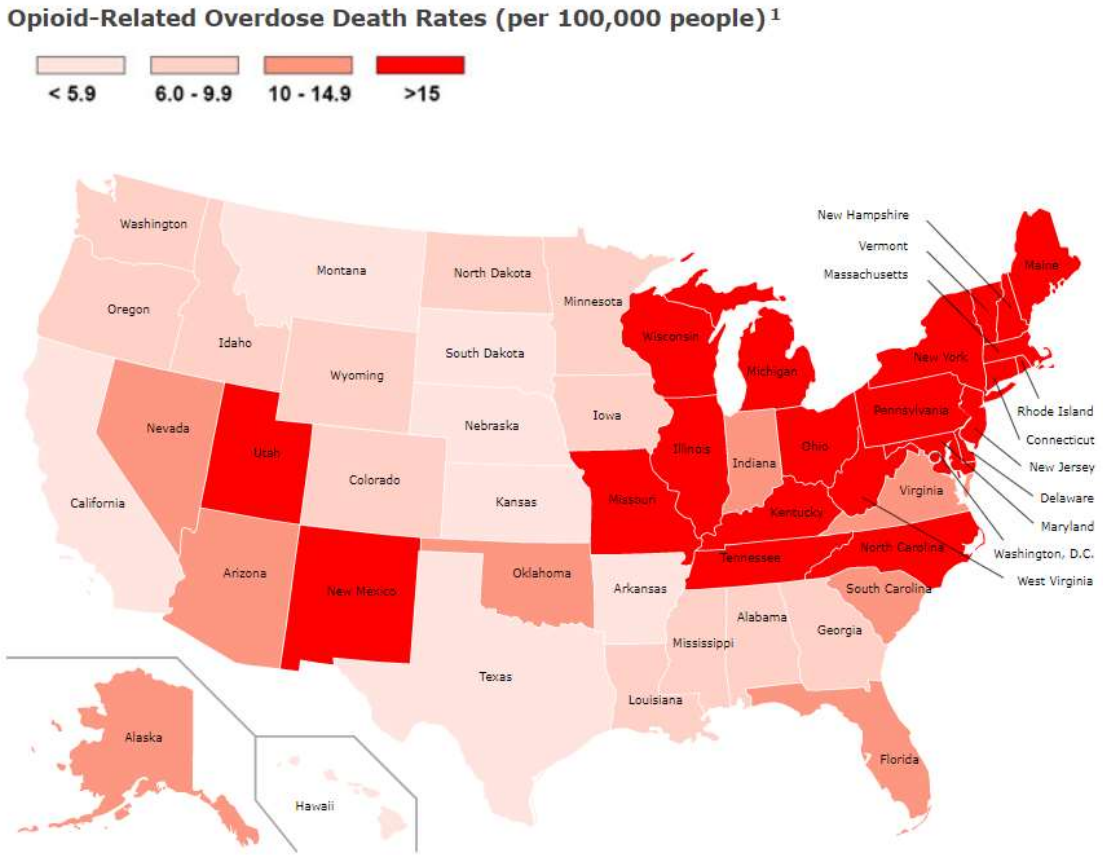
(Winter et al., Cochrane Database of Systematic Reviews, 2017; https://www.cdc.gov/drugoverdose/opioids)

Recent rise in opioid-related deaths due to synthetic opioids, but commonly prescribed opioids are still significant contributors



https://www.cdc.gov/drugoverdose/opioids

Rate of opioid-related overdoses are among the highest in Maine



(https://www.cdc.gov/drugoverdose/opioids ; https://www.drugabuse.gov/drugs-abuse/opioids)

In addition to overdoses, people taking opioids have endocrine side effects

Effects of opioid use on:	
Hypothalamic-pituitary-gonadal (HPG) axis	**Inhibitory effect:** **↓ testosterone or estradiol**
Hypothalamic-pituitary-adrenal (HPA) axis	Inhibitory effect: ↓ cortisol
Hypothalamic-pituitary-thyroid axis	TSH levels (controversial)
Somatotropic axis	growth hormone (GH) secretion
Prolactin	Stimulatory effect ↑
Skeleton	↑ Fracture risk ↓Bone Mineral Density (BMD)

(Fountas et al., European Journal of Endocrinology, 2018)

Potential mechanisms of opioid-induced fracture and bone loss

- Higher Risk of Falls (dizziness)
- Hypogonadism, however, postmenopausal women in use of opioid treatment for pain still have ↑ fracture risk.
- Other mechanisms?
  1. Direct effects on osteoblasts and osteoclasts.
  2. Modulation of autonomic control of bone (low PSNS associated with impaired gastric motility)
  3. Modulation of sensory neuropeptides release.

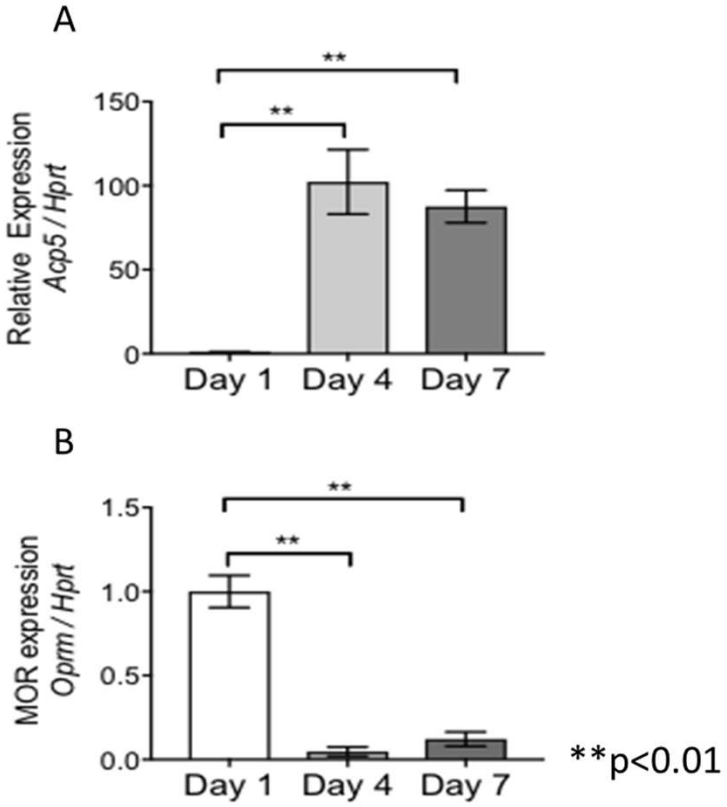
(Perez-Castrillon, Neuroendocrinology, 2000; Vestergaard et al., Journal of Internal Medicine, 2006; Fountas et al., European Journal of Endocrinology, 2018)

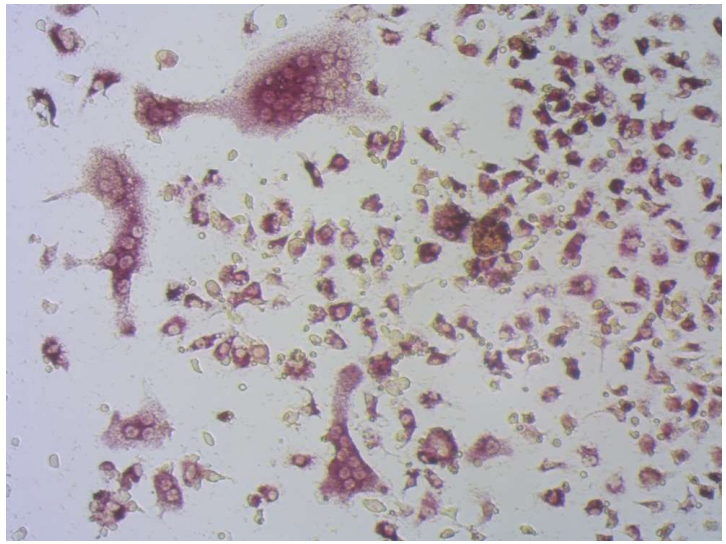
Opioid receptors mediate analgesic effects

- **Mu (μ) opioid receptor (MOR)**
  - **analgesia**
  - sedation
  - respiratory depression
  - bradycardia
  - nausea and vomiting (reduction in gastric motility)
- Delta (δ) opioid receptor (DOR)
- Kappa (κ) opioid receptor (KOR)

(Pathan and Williams, British Journal of Pain, 2012)

Primary osteoclasts express MOR, but osteoblasts did not express it in our hands

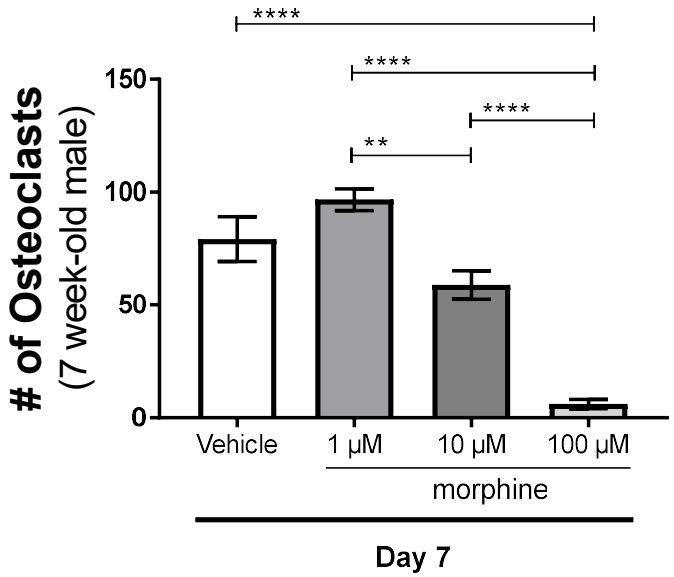


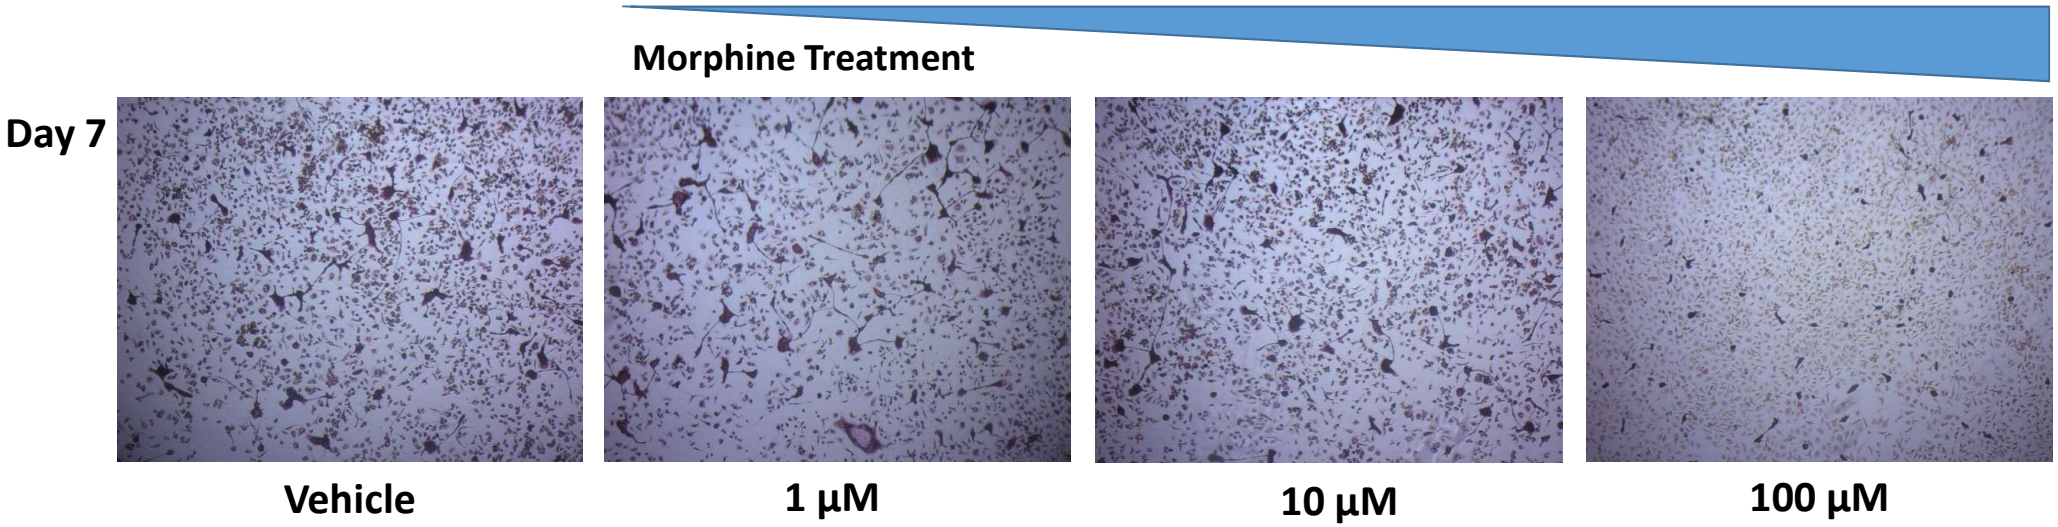


High dose morphine suppresses osteoclast differentiation, but lower doses may increase osteoclast numbers

- Similar results with DAMGO

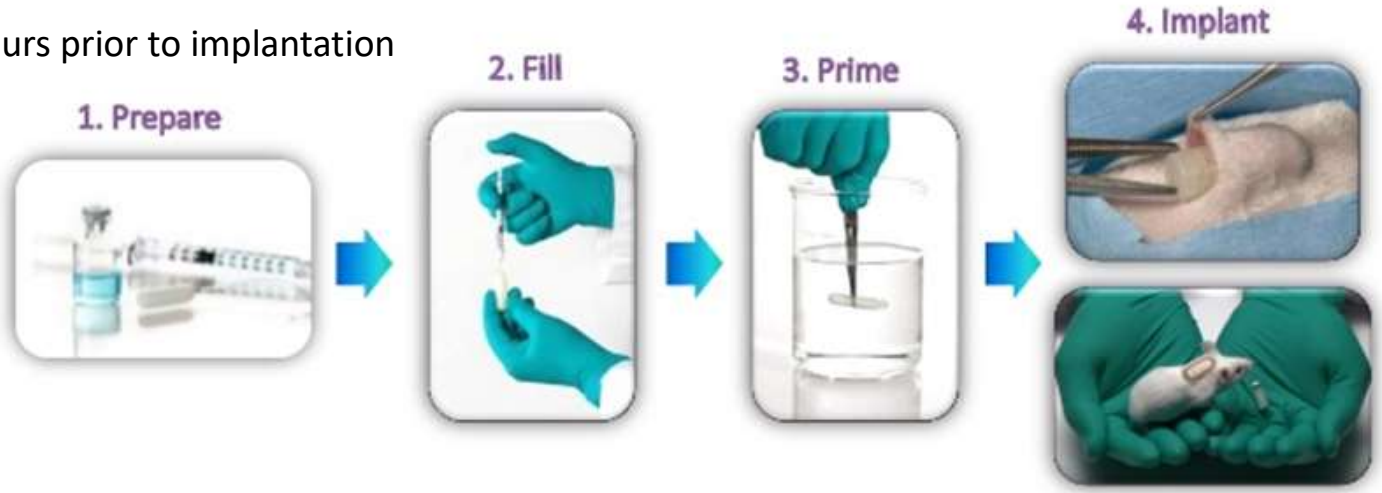
([D-Ala^2, N-Me-Phe^4, Gly^5-ol]-Enkephalin acetate salt)



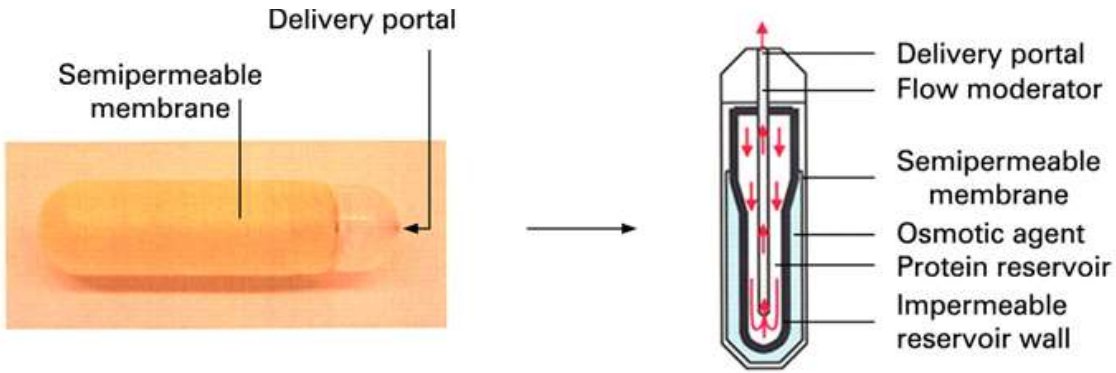


Model of opioid-induced bone loss

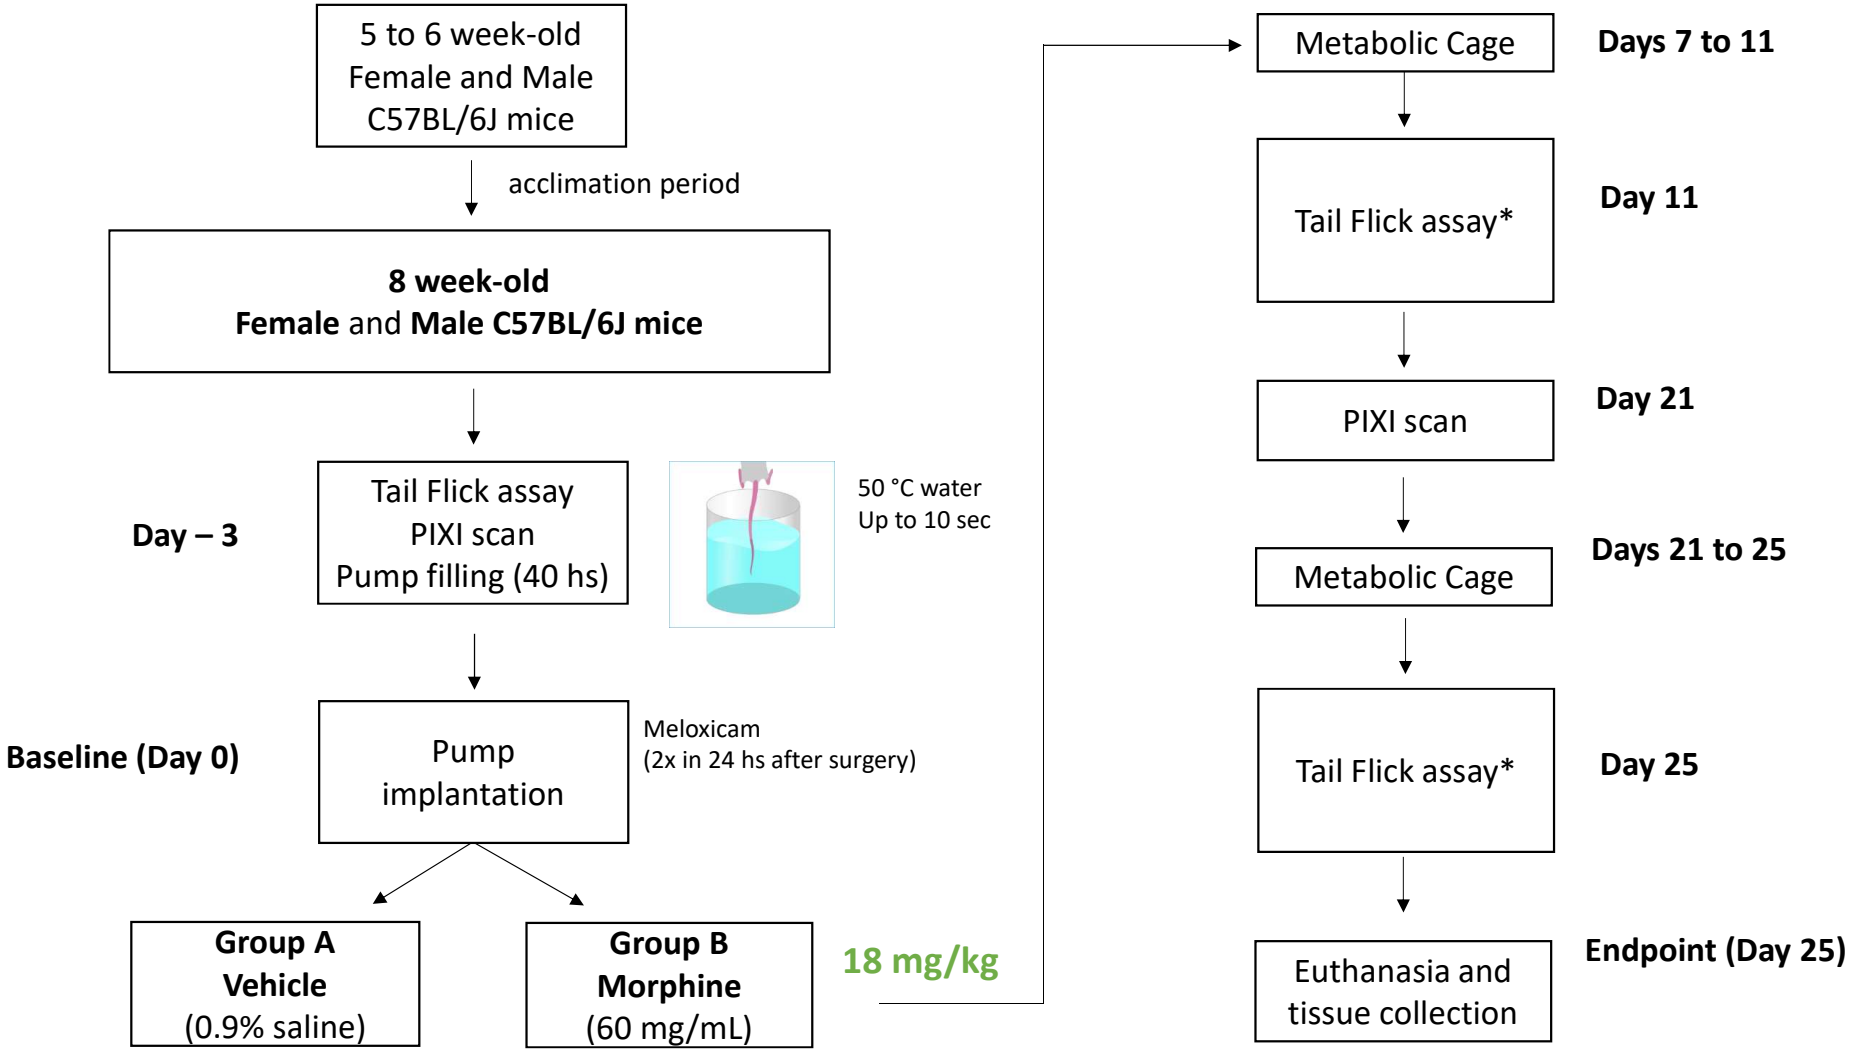
40 hours prior to implantation



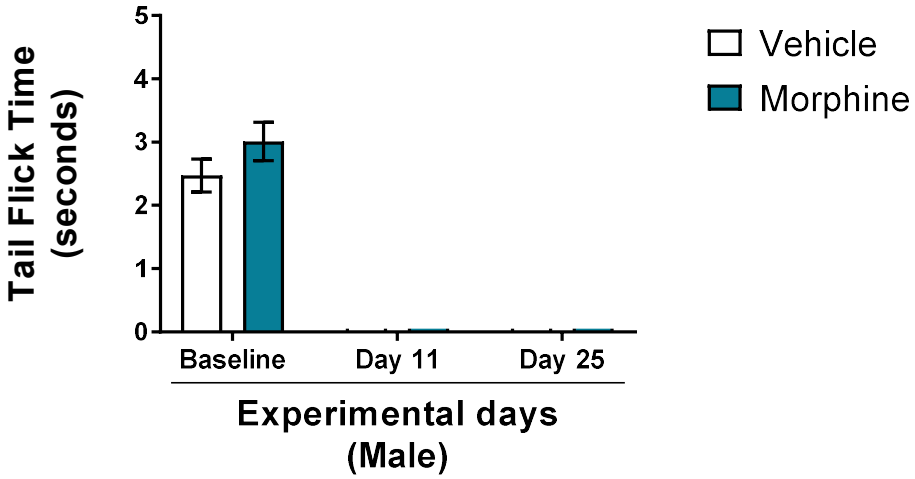
Delivery rate: 0.25 µl/hr
Capacity: 220 µl
Final dose: 18 mg/kg/day

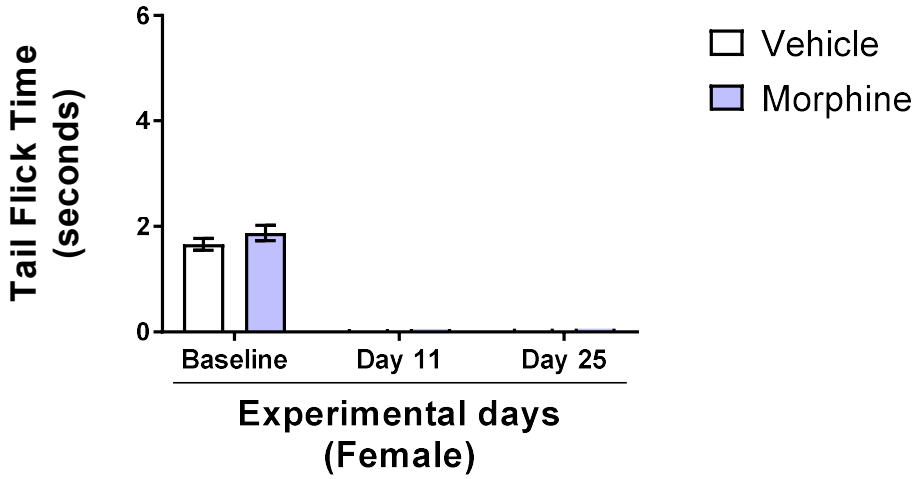


Experiment #1 – Establish a model of morphine-induced bone loss.

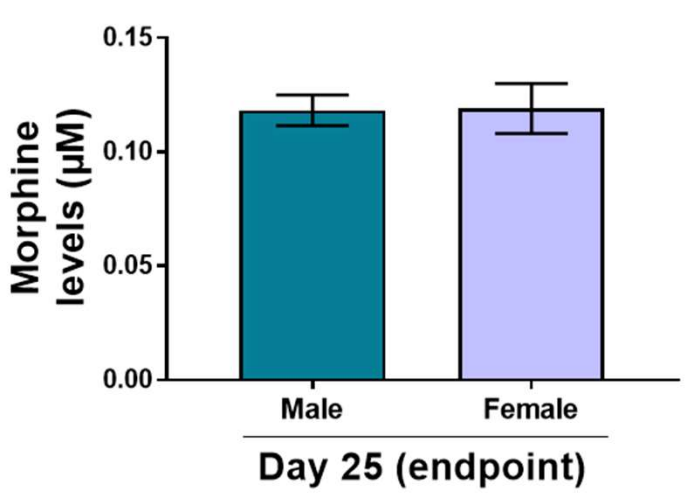


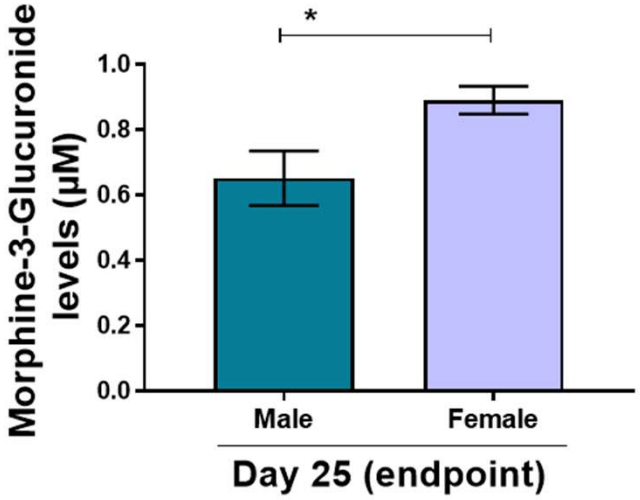
Tail flick assay indicates morphine-induced analgesia may be reduced by endpoint



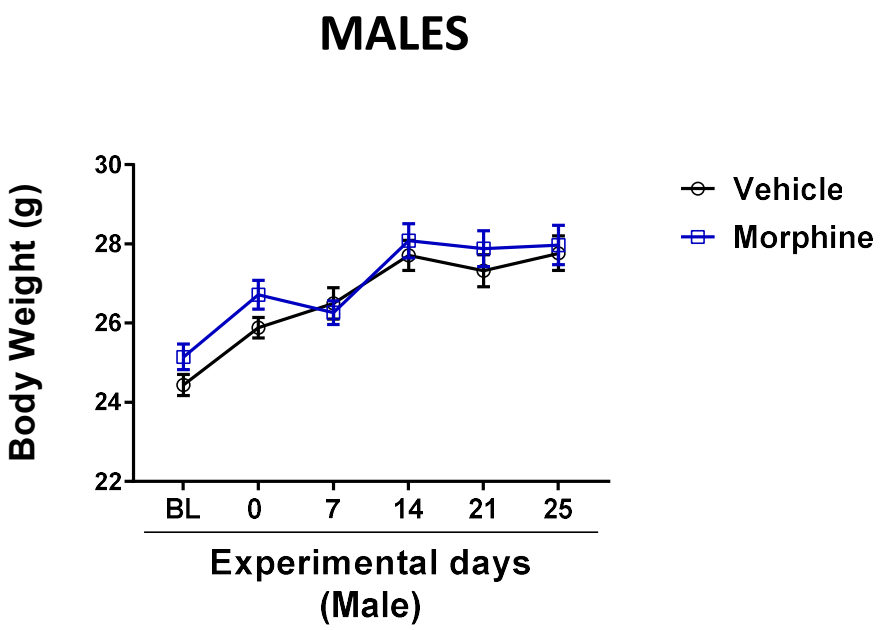


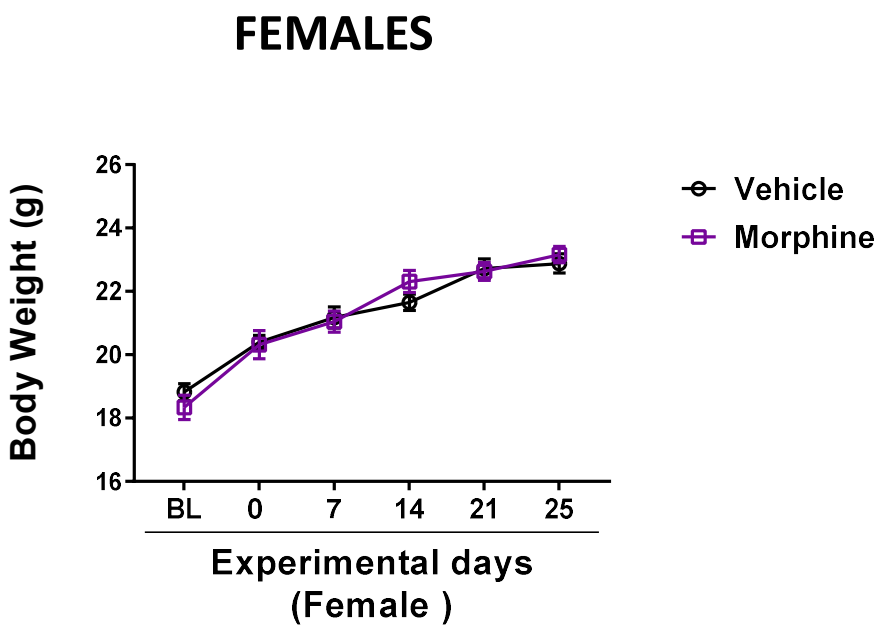
Morphine and metabolite still detectable in serum at the end of the study



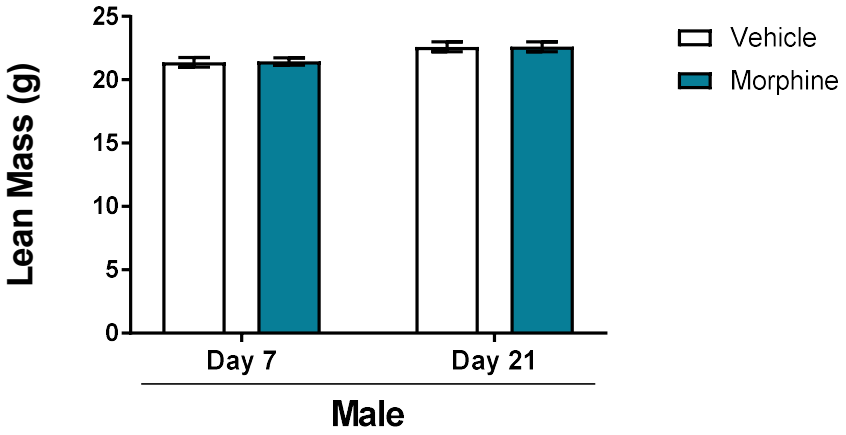


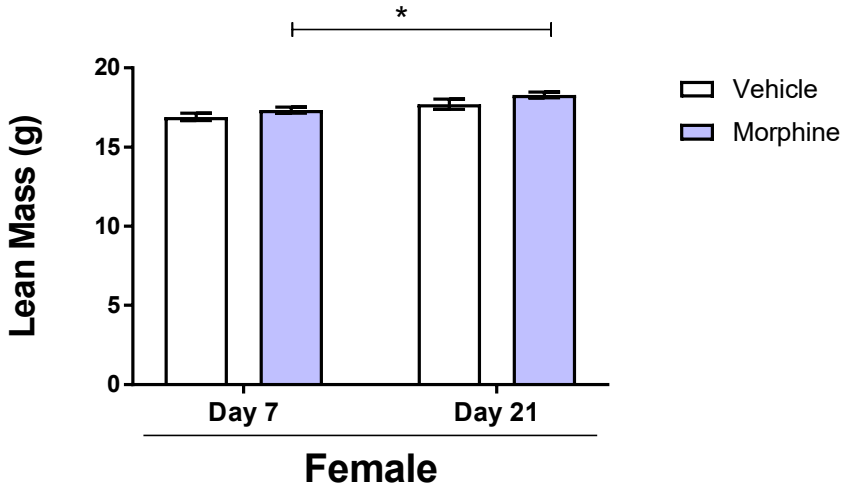
Body weight was not affected by morphine treatment

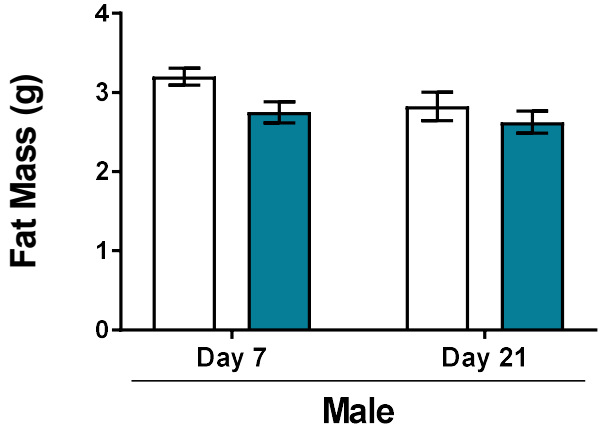


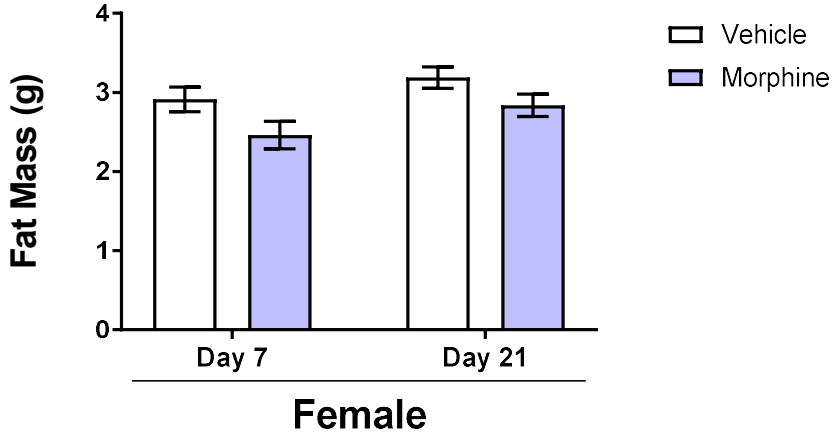


Subtle changes in body composition during the study

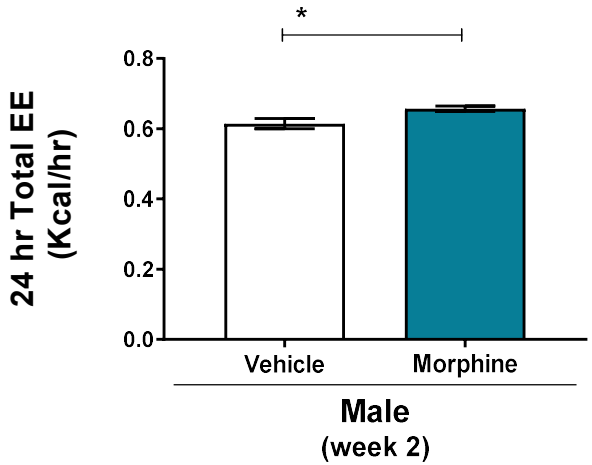






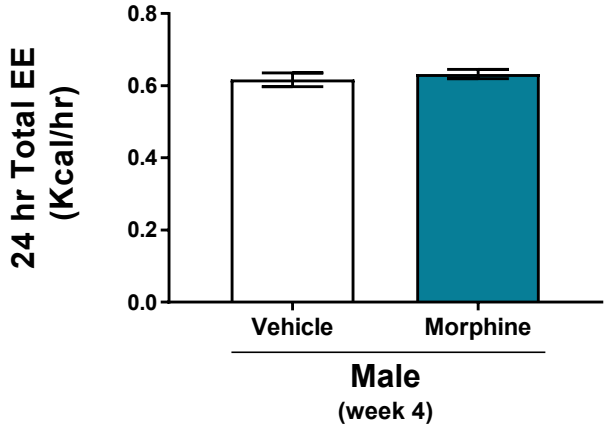


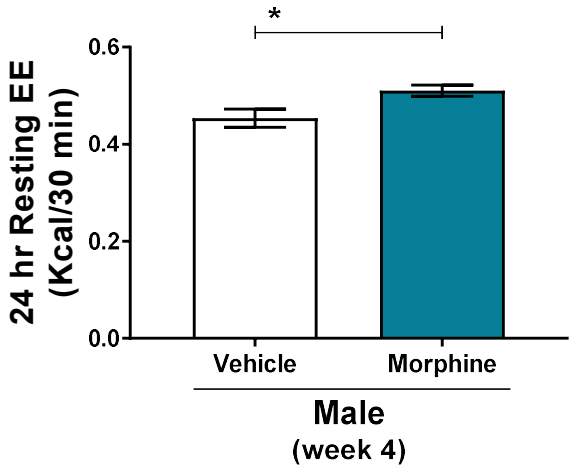
Morphine induced increase in Energy Expenditure (EE)



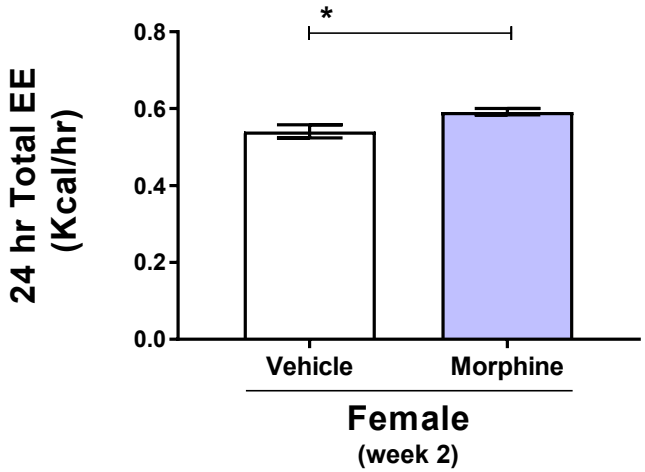
Morphine-treated Males:

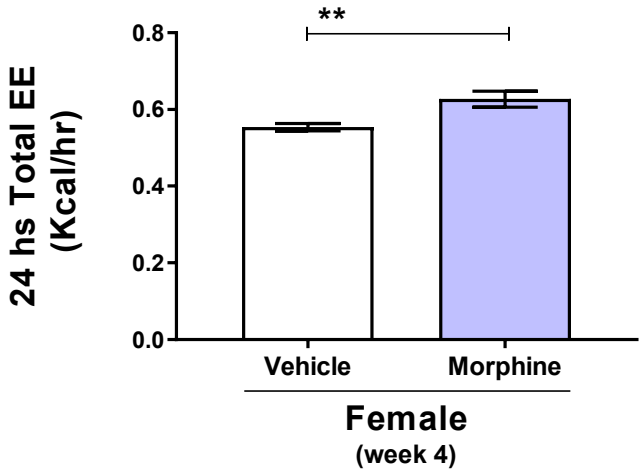
↑ **Resting EE** throughout the study





Morphine induced increase in Energy Expenditure (EE)

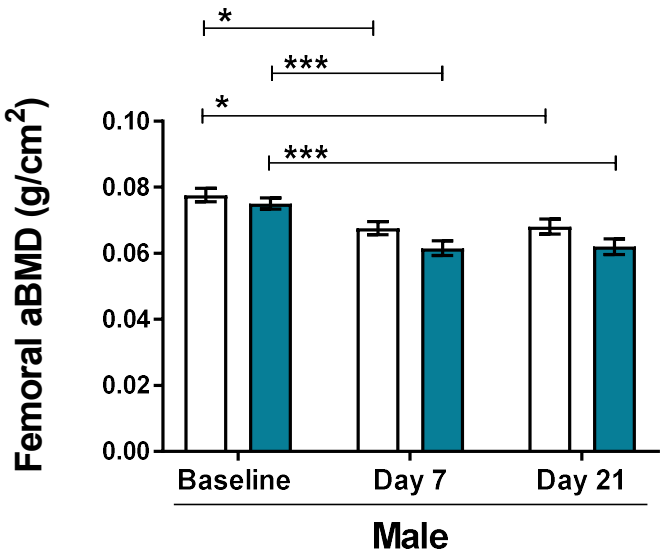


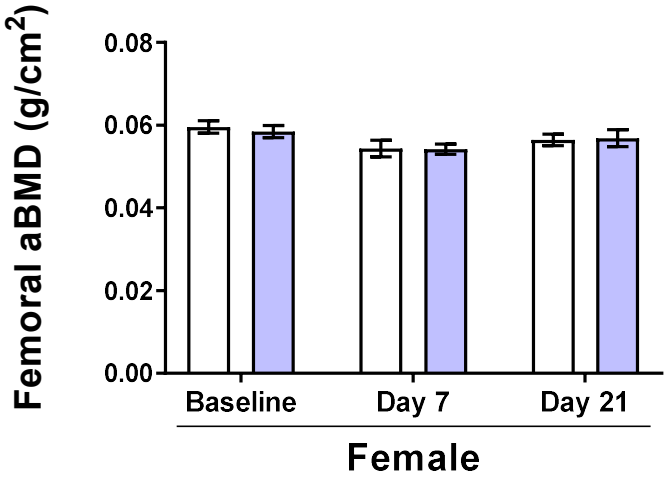


Morphine-treated Females:

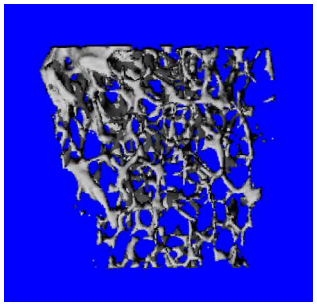
↑ **Total EE** throughout the study

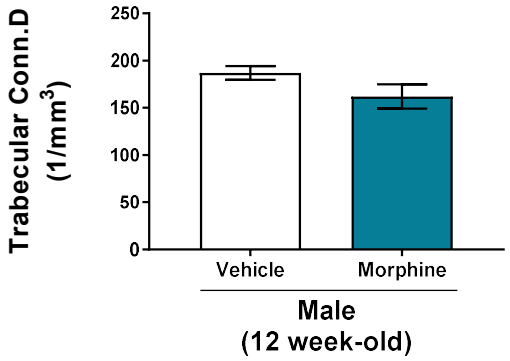
DXA results suggest bone loss in males but not females

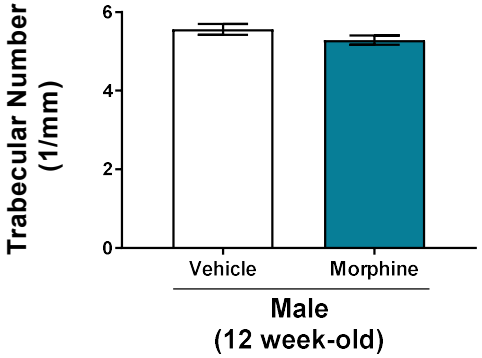


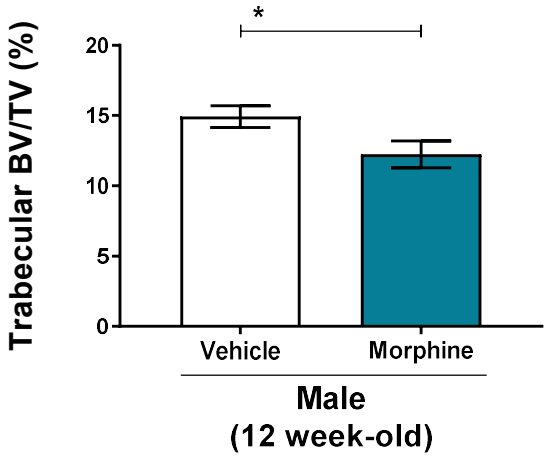


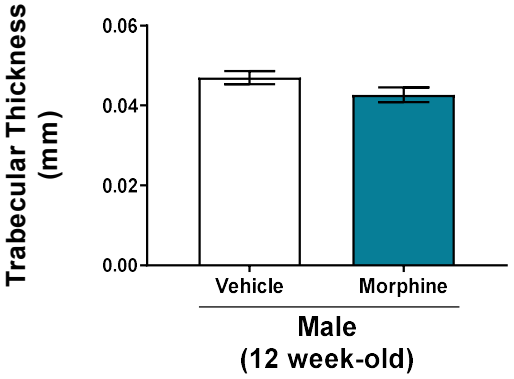
Trabecular bone volume was reduced in Male morphine-treated mice (µCT), but not females

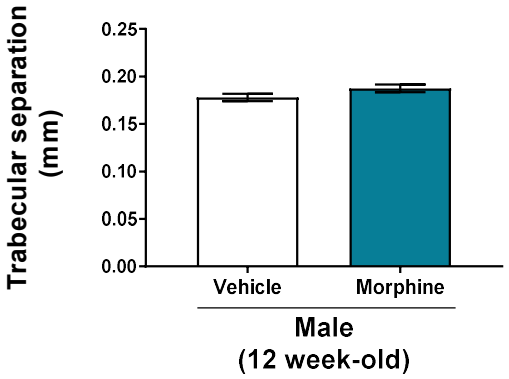




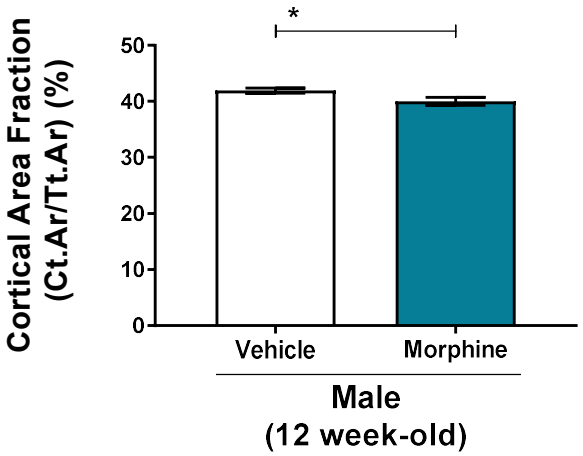


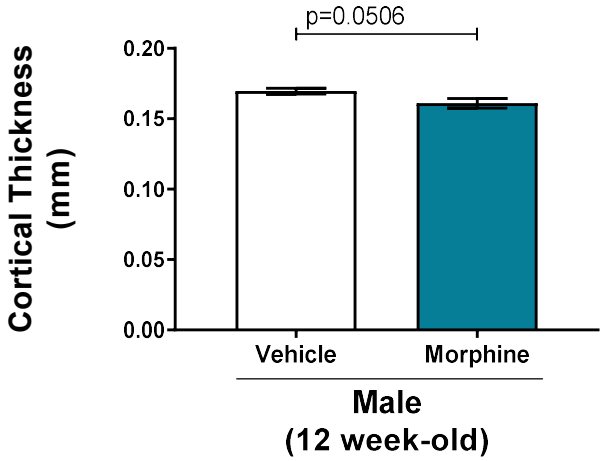


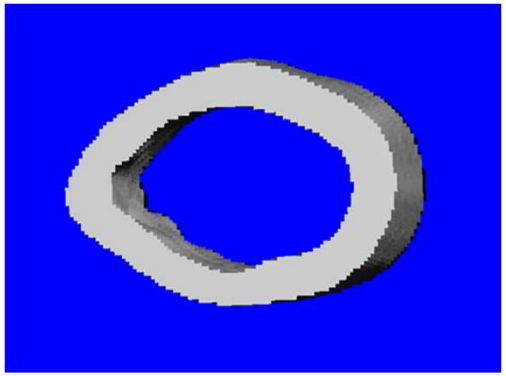


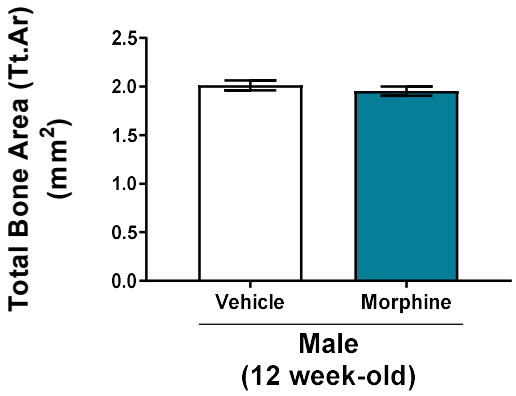


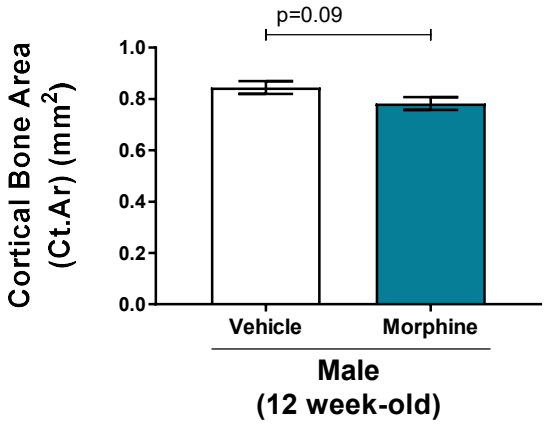
Male, but not female morphine-treated mice exhibited impaired cortical expansion

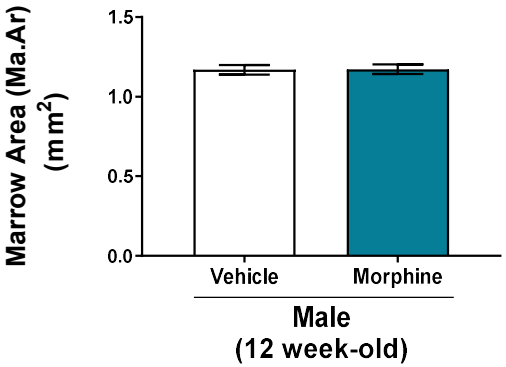












Summary

- Morphine reduced osteoclast differentiation *in vitro*.
- Morphine did not significantly alter body composition *in vivo*.
- Male, but not female, mice exhibit trabecular and cortical bone loss from 25-day morphine treatment, despite equivalent drug exposure.
- Either indirect effects, or direct effects on osteoblasts are responsible for morphine-induced bone loss.

Future directions

- Test whether there is a direct effect of morphine on osteoblasts.
- Test the cellular mechanism of morphine-induced bone loss *in vivo*.
- Perform limited omic studies to identify novel mediators of morphine-induced bone loss (miRNA).
- Test whether OVX females would lose bone with morphine.
- Test whether β-blocker would limit morphine-induced bone loss.
- Test how sensory neuropeptide release is modulated by morphine.

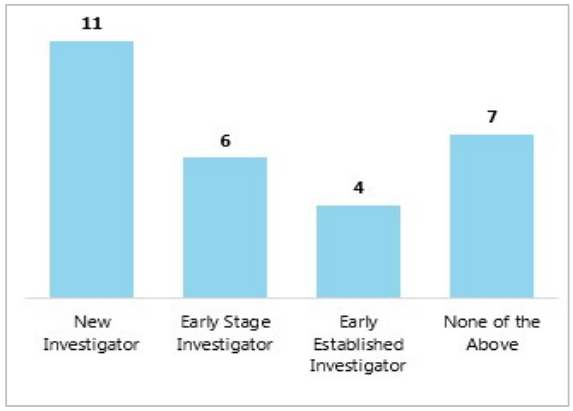
Reflections

A Few Successes

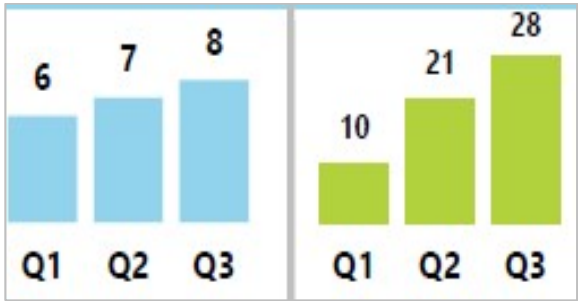
- **Pilot Projects**
  - Describe applicants
  - Follow group
  - Link to registration

- **Rural Health Core**
  - Describe service recipients
  - Describe assistance
  - Measure reach and spread

Researcher Status: Round 3 (n=28)



Rural Core Navigation Services



New Navigation Projects

Consultations

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Reflections

Registration and Needs Assessment

- **Our only mechanism to describe investigators and training needs**
- **Challenges and opportunities:**
  - Limited communication and outreach
  - Benchmarks are unclear
  - The process is voluntary (except for pilot applicants)
- **Moving forward:**
  - Is this processed valued?
  - Do we want to boost registration?
  - Ho do we incentivize registration?
  - Are there additional information needs?
  - Should we keep the needs assessment?

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Reflections

Utilization of Core Services

- **We use a flexible approach to assess utilization**
- **Challenges and opportunities:**
  - Differences across sites in data collection processes
  - Capturing NNE-CTR “users”
  - Collecting the right data
- **Moving forward:**
  - Do we feel comfortable with our progress?
  - Will we have what we need for the reapplication?
  - What else can we do to showcase utilization rates?

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Reflections

Investigator Satisfaction with Services

- **We use survey data and interviews to assess satisfaction**
- **Challenges and opportunities:**
  - Standardized items exist
  - Without clear NNE-CTR “user” database, efforts are core-specific
  - Progress is slow
- **Moving forward:**
  - Is this a priority for year three?
  - Do we want to assess satisfaction with everyone?

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Reflections

Other Metrics

- **Our efforts to assess other key metrics are underway including:**
  - Collaboration
  - Research capacity and productivity
  - Grants, presentations, and publications
  - Community engagement
- **Challenges and opportunities:**
  - Adding additional burden to each core
- **Moving forward:**
  - What the best approach for decision-making?

NORTHERN NEW ENGLAND
CLINICAL & TRANSLATIONAL
RESEARCH NETWORK

Reflections

Next Steps

- **Talk -** remaining evaluation needs, goals and benchmarks
- **Decide -** priorities, opportunities and potential areas holding us back
- **Plan -** data collection efforts
- **Collect -** commit to standardization
- **Report -** share findings
- **Review -** reflect on our efforts

Context

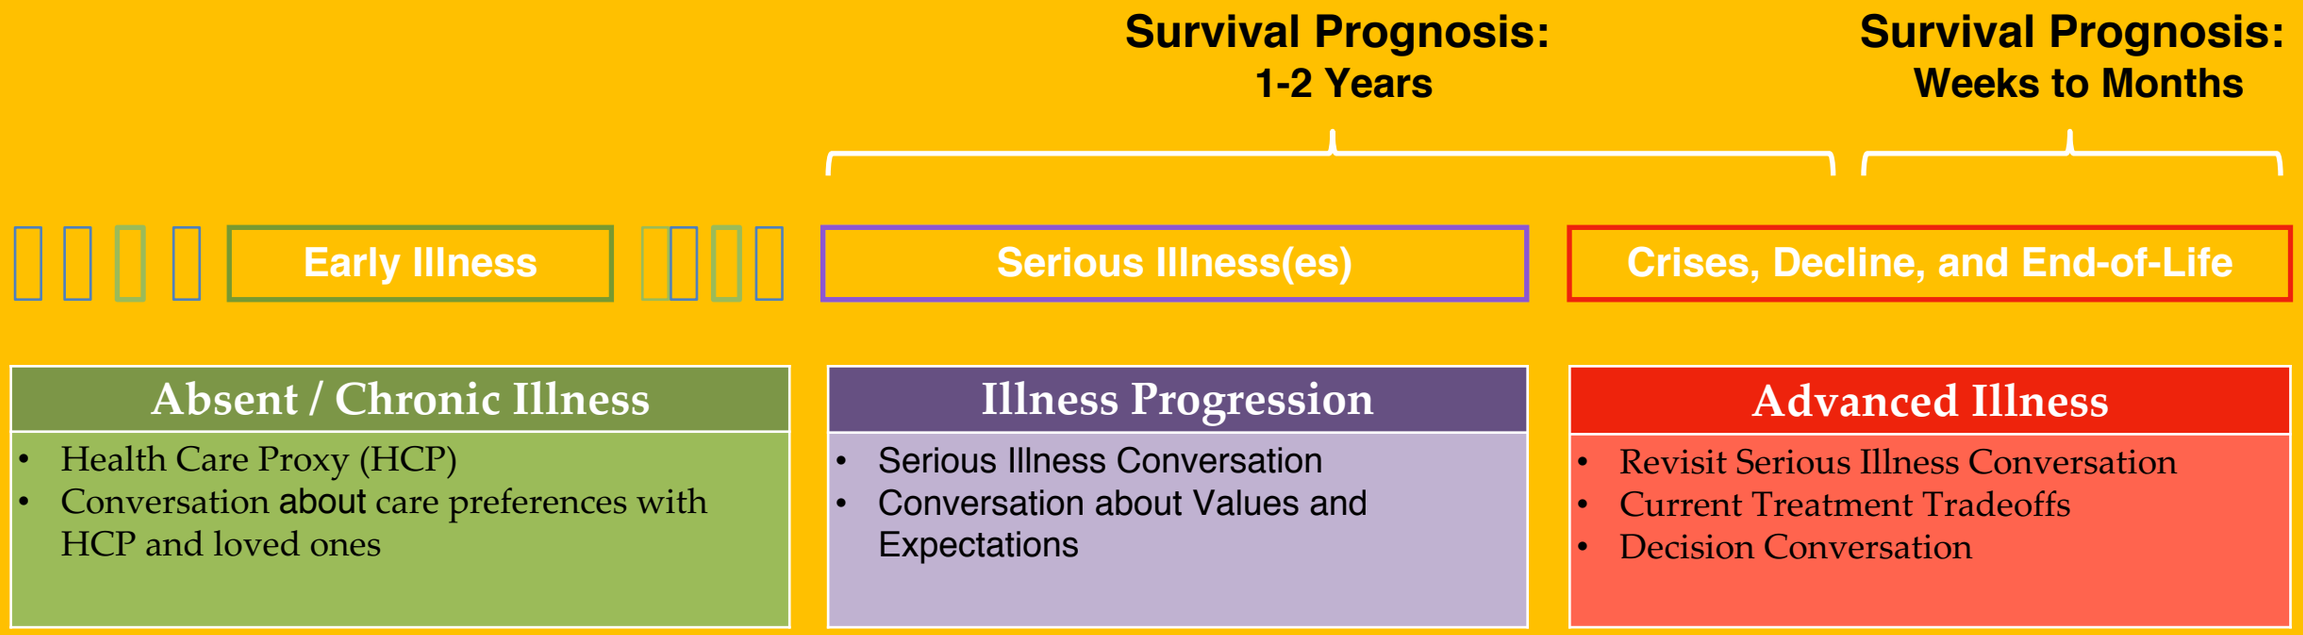
Scientific Context: Conversations



Advance Care Planning = Planning in Advance of Serious Illness

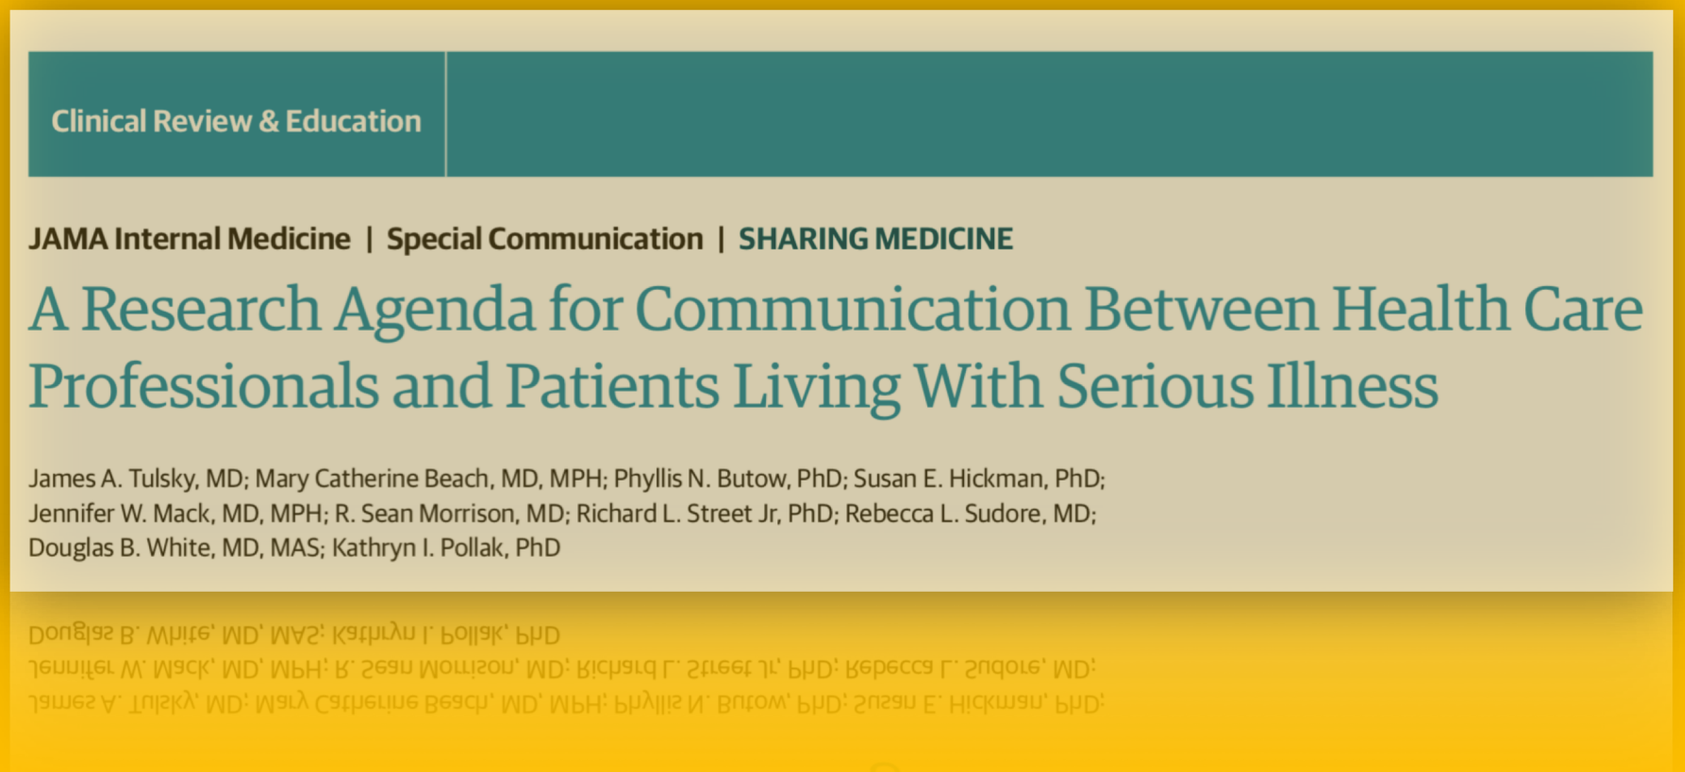
Serious Illness Conversation(s) = Planning in the context of progression of serious illness, may or may not include clinical decisions, revisit when needed

Decisions Conversation(s) = Revisit serious illness conversation and make treatment decisions in context of clinical progression / crisis / poor prognosis

borrowed with permission from S. Block, Ariadne Labs,
Harvard School of Public Health

Scientific Context: Measurement

"...dependence on human manual coding makes them slow and cumbersome and not easily disseminated. For such methods to provide feedback to clinicians or reviewers on a mass scale, high-quality **automated coding will be required**."



AIM ONE

To assess the feasibility and acceptability of NNE Palliative Care TeleConsult Research Laboratory among seriously ill people of rural Vermont (advanced cancer) and Maine (Stage D heart failure)

AIM TWO

To develop our capacity for automating measurement of conceptually-important conversation features for the TeleConsult medium

AIMS

ELIGIBILITY

Adults being cared for by non-hospice home health nursing and are diagnosed with either Stage 3 or 4 solid tumor (Vermont, n=10) or Stage D heart failure (Maine, n=10)

INTERVENTION

-TeleConsultation with specialty palliative care physician or APRN

-Facilitated in home by home health nurse

OUTCOMES

Reach: Potential eligible / approached / enrolled / completed

Barriers: Re-scheduling / “no shows” / technical malfunctions

Acceptability: Satisfaction with TeleHealth (*TeSS*)

Patient / Loved One /Clinician Experience: PCCRI *Heard & Understood*

Qualitative Interviews: Unstructured

AIM ONE Feasibility & Acceptability

“Clinicians engaging in conversations about serious illness have 3 primary tasks—establishing connection; eliciting values, goals, and preferences; and delivering information.”

(Tulsky et al, *JAMA Internal Medicine* 2017)

AIM TWO Feature Recognition

“Clinicians engaging in conversations about serious illness have 3 primary tasks—establishing connection; eliciting values, goals, and preferences; and delivering information.”

Sounds (acoustic signal)

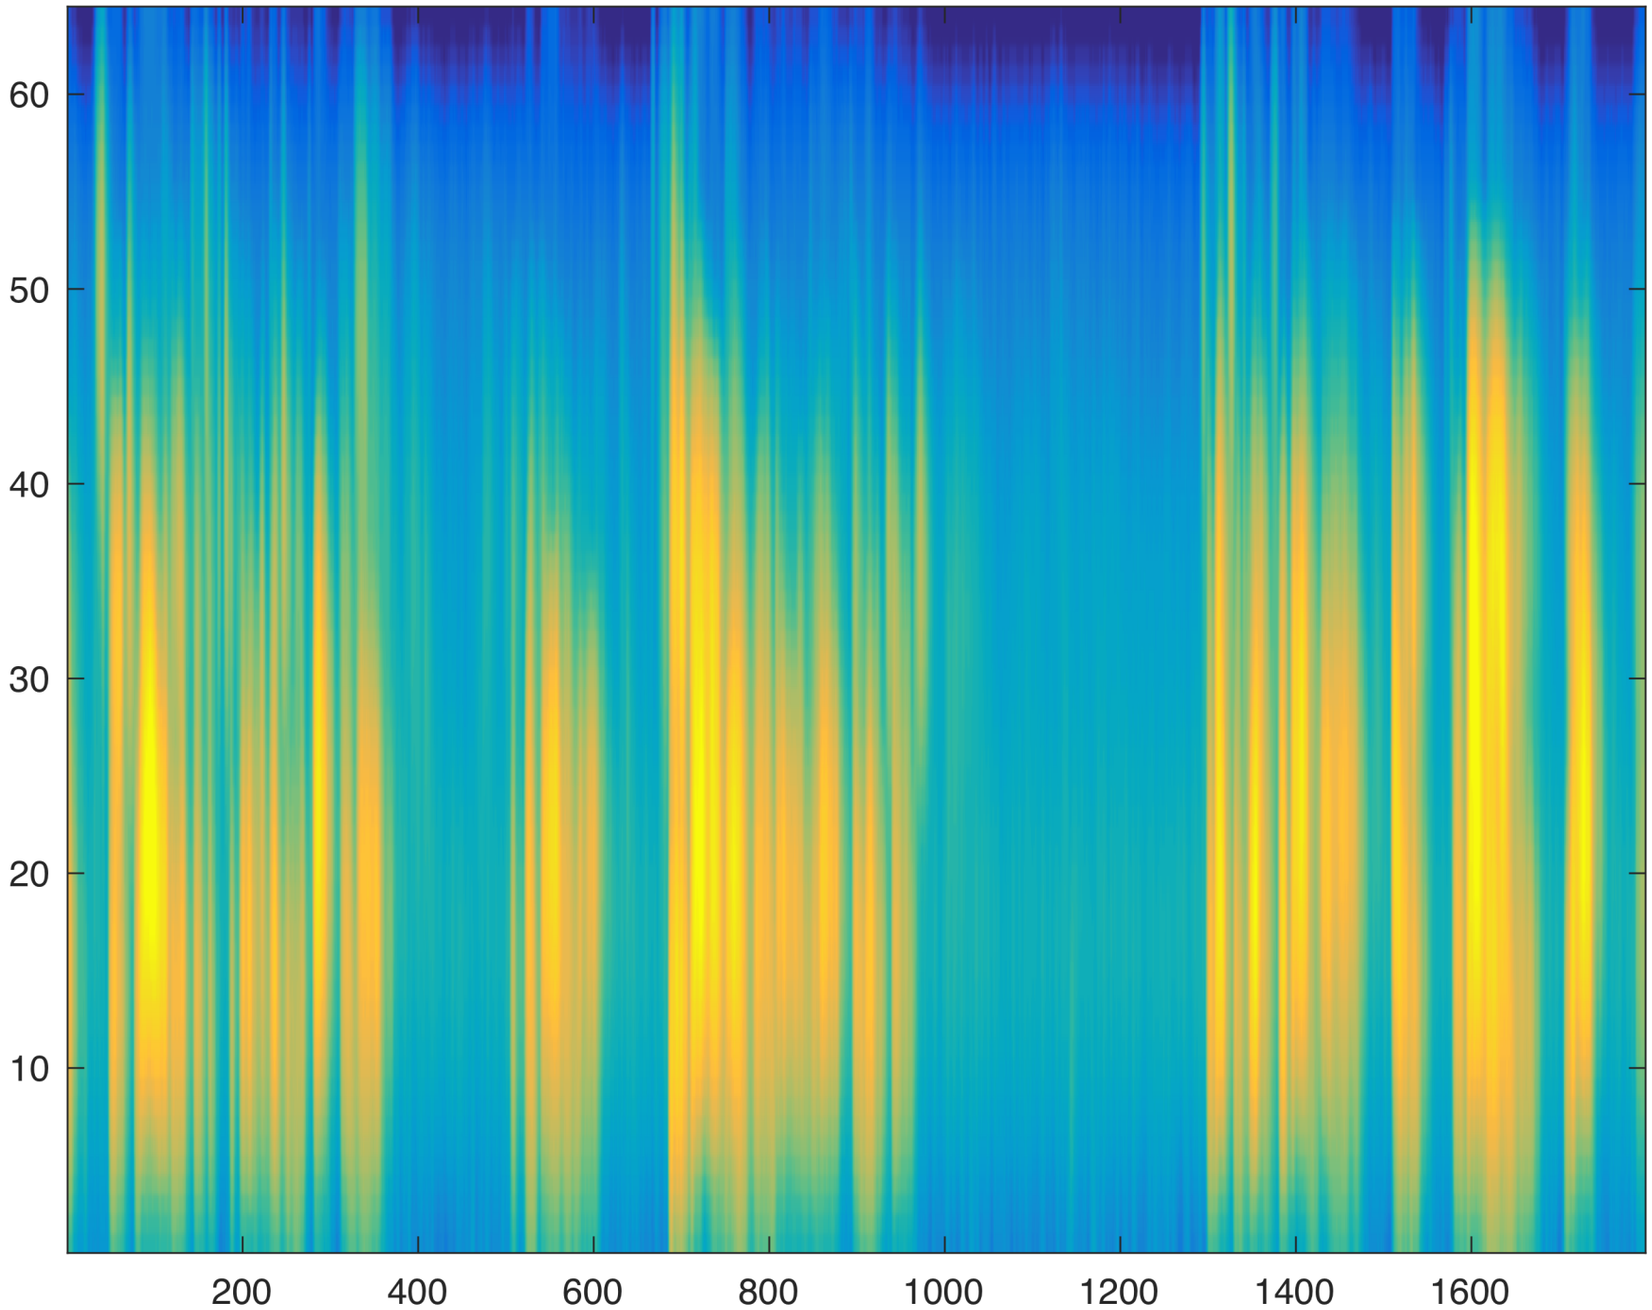
Images (video signal)

AIM TWO Independent Data

Connectional Silence

Emotional Synchrony

AIM TWO Dependent Data

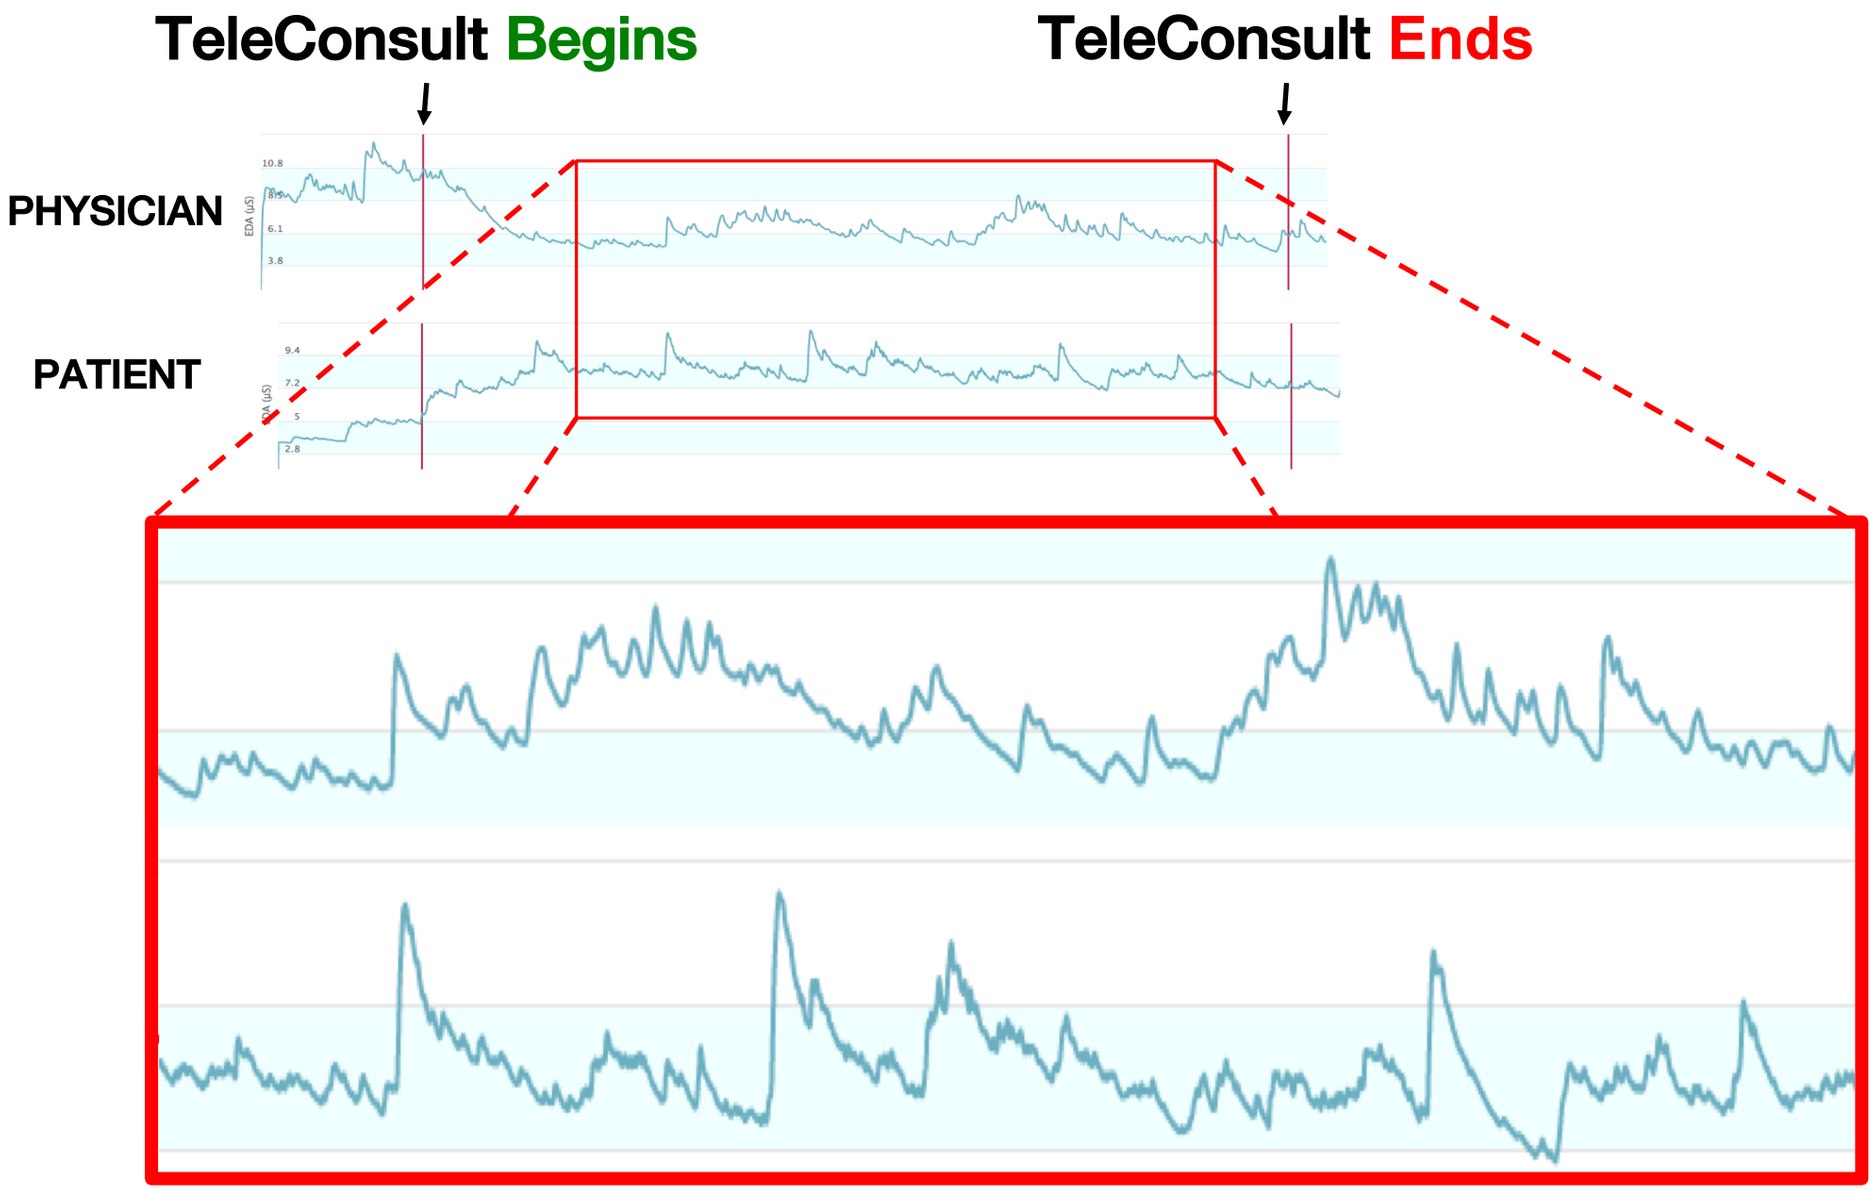


Manukyan et al, *Journal of Palliative Medicine*, 2018

Durieux et al, *Journal of Palliative Medicine*, 2018

Conversational Pauses

Electrodermal Activity (μS)



Emotional Synchrony

This [telehealth] is so important…

Patient

Palliative Care via telemedicine is a really beneficial resource, especially for a patient with chronic illnesses who needs PC support and feels lost in the system. The biggest issue with our population is that people have difficulty leaving their homes and so this is valuable.

Home Health Nurse

Having the nurse present for the visit was very helpful. I did feel there was less room for 'small talk' in the early stage of the conversation…. The sign-off process felt awkward.

Palliative Care Specialist Physician

Participant Comments

My sincere gratitude to

the **patients, families, and palliative care clinicians** who make this work both meaningful and possible

my **amazing teammates** who make us all better

the **NNE CTRN** for funding this work

Opioid Prescribing Policies

July 1, 2017: Prescribing restrictions # of pills / dose

- Moderate pain: up to 120 MME total
- Severe pain: up to 160 MME total
- Extreme pain (documented): up to 350 MME total

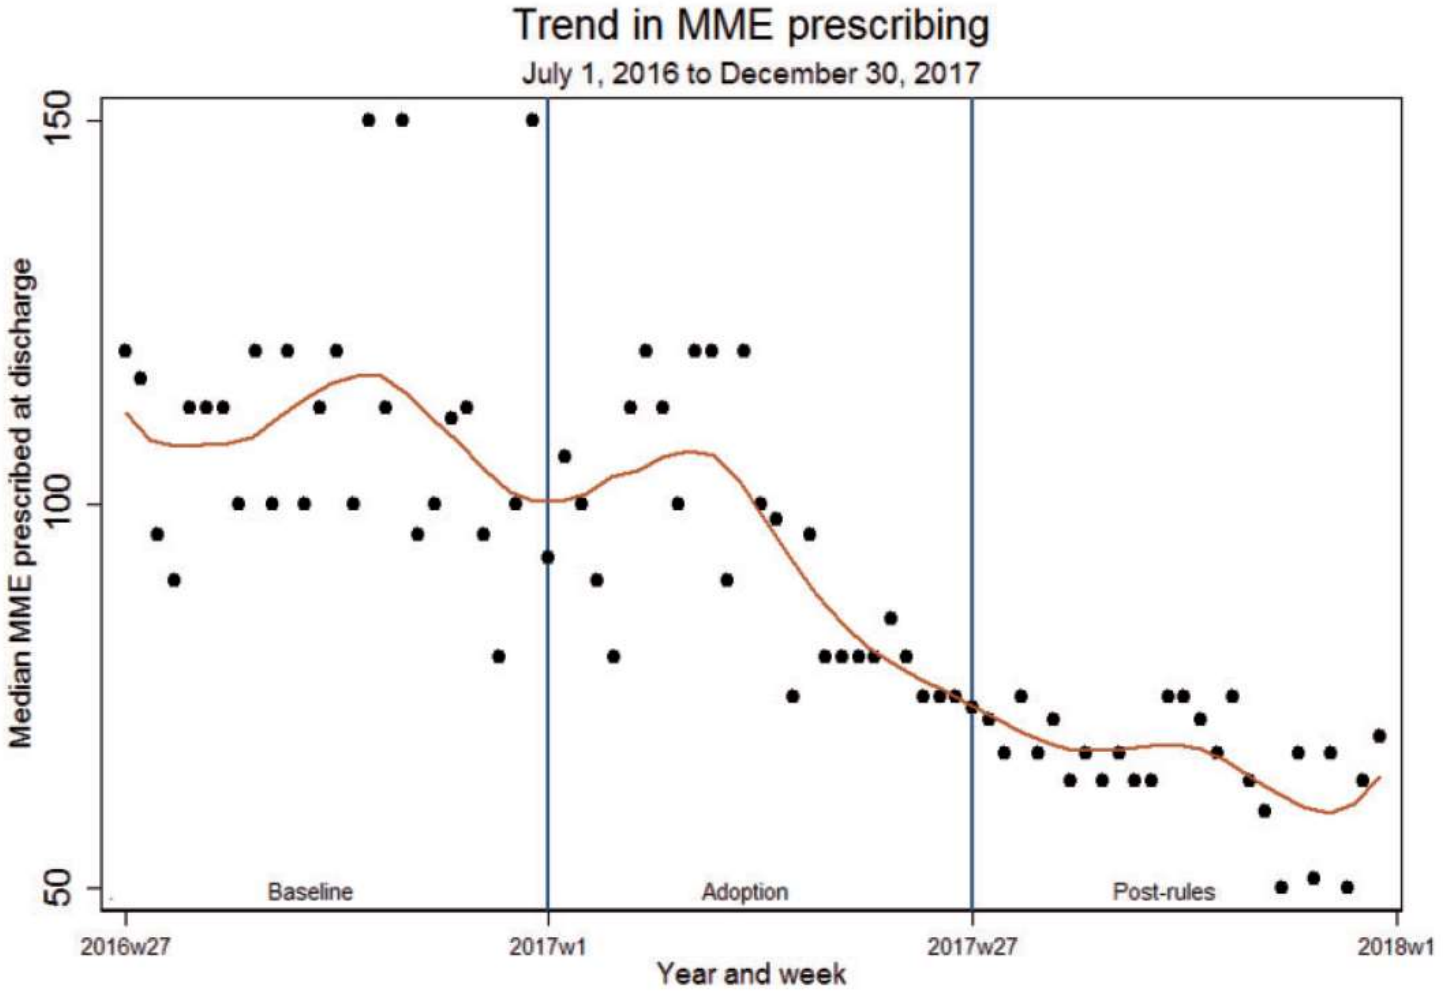
Prescription Monitoring Program check required

July 29, 2016: 100 morphine milligram equivalent (MME) prescribing restriction

January 1, 2017: Prescription Monitoring Program check required

July 1, 2017: All prescriptions must be electronic

Impact of Policy Interventions at UVMMC on Postoperative Opioid Prescribing



Source: MacLean, Fujii, et al. 2018. Pain Medicine

➢**30+ meetings with community partners across Maine and Vermont**

Objective

Quantify the impact of opioid prescribing policies on opioid overdoses and related events to inform treatment interventions.

Specific Aims

1. Measure the impact of opioid prescribing policies on hospital utilization (Emergency Dept. and Inpatient) due to opioid overdose, adverse effects, & medical events

2. Identify patient-level clinical predictors of hospital utilization for opioid overdose and related medical events in relation to opioid prescribing policies

Original Hypotheses

Specific Aim 1: *Measure the impact of opioid prescribing policies on hospital utilization (ED and inpatient) due to opioid overdose, adverse effects, & medical events*

- Hypothesis 1a: Opioid-related hospital utilization rates will decrease after the implementation of prescribing policies.

- Hypothesis 1b: Changes in opioid-related hospital utilization rates will be moderated by type of opioid or opiate, age category, and geographic area.

Measure Specification

Measure Title:

Opioid Related Emergency Department & Hospitalization Visit Rate

Measure Description:

The rate (person-time) of visits to the emergency department (ED) or inpatient hospital with diagnoses for opioid overdose/poisoning, opioid-related adverse effects, or opioid-related medical events during the measurement period.

Population:

Patients 15 years and older

Overdose Rate =

Numerator: # of ED visits and hospitalizations for opioid overdose

Denominator: Person - Time

Opioid Overdose / Poisoning

OPIOID OVERDOSE/POISONING, ANY REASON	ICD-10-CM			
ANY OPIUM OVERDOSE	T40.0X1	T40.0X2	T40.0X3	T40.0X4
ANY HEROIN OVERDOSE	T40.1X1	T40.1X2	T40.1X3	T40.1X4
ANY OTHER OPIOID OVERDOSE	T40.2X1	T40.2X2	T40.2X3	T40.2X4
ANY METHADONE OVERDOSE	T40.3X1	T40.3X2	T40.3X3	T40.3X4
ANY SYNTHETIC NARCOTIC OVERDOSE	T40.4X1	T40.4X2	T40.4X3	T40.4X4
→ ANY UNSPECIFIED NARCOTIC OVERDOSE	T40.601	T40.602	T40.603	T40.604
ANY OTHER NARCOTICS OVERDOSE	T40.691	T40.692	T40.693	T40.694

LESSONS LEARNED:

- ED physicians often choose Any Unspecified Narcotic Overdose
  Therefore, it is difficult to separate heroin from opioid pills

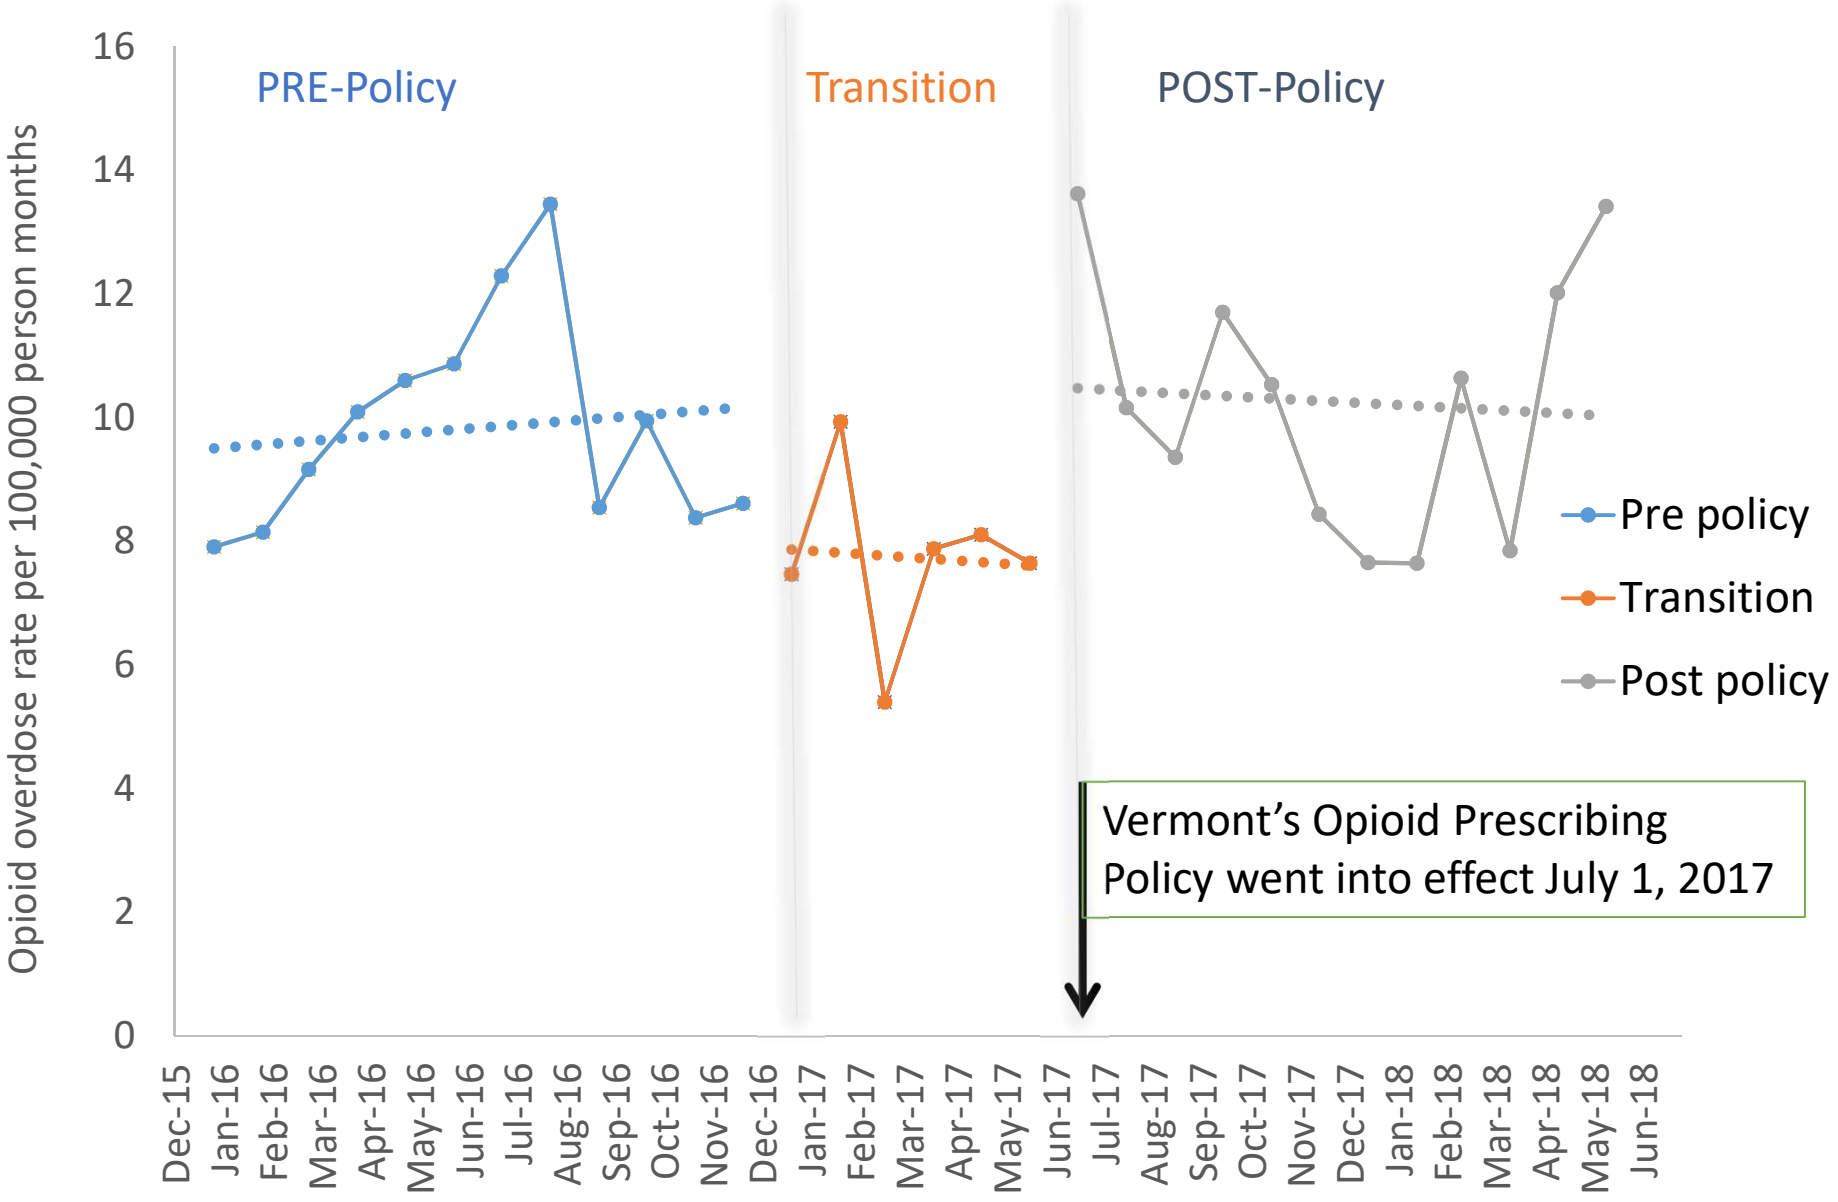
Original Hypotheses

Specific Aim 1: *Measure the impact of opioid prescribing policies on hospital utilization (ED and inpatient) due to opioid overdose, adverse effects, & medical events*

- Hypothesis 1a: Opioid-related hospital utilization rates will decrease after the implementation of prescribing policies.

- Hypothesis 1b: Changes in opioid-related hospital utilization rates will be moderated by type of opioid or opiate, age category, and geographic area.

Opioid Overdose Rates



Opioid Overdose Rates

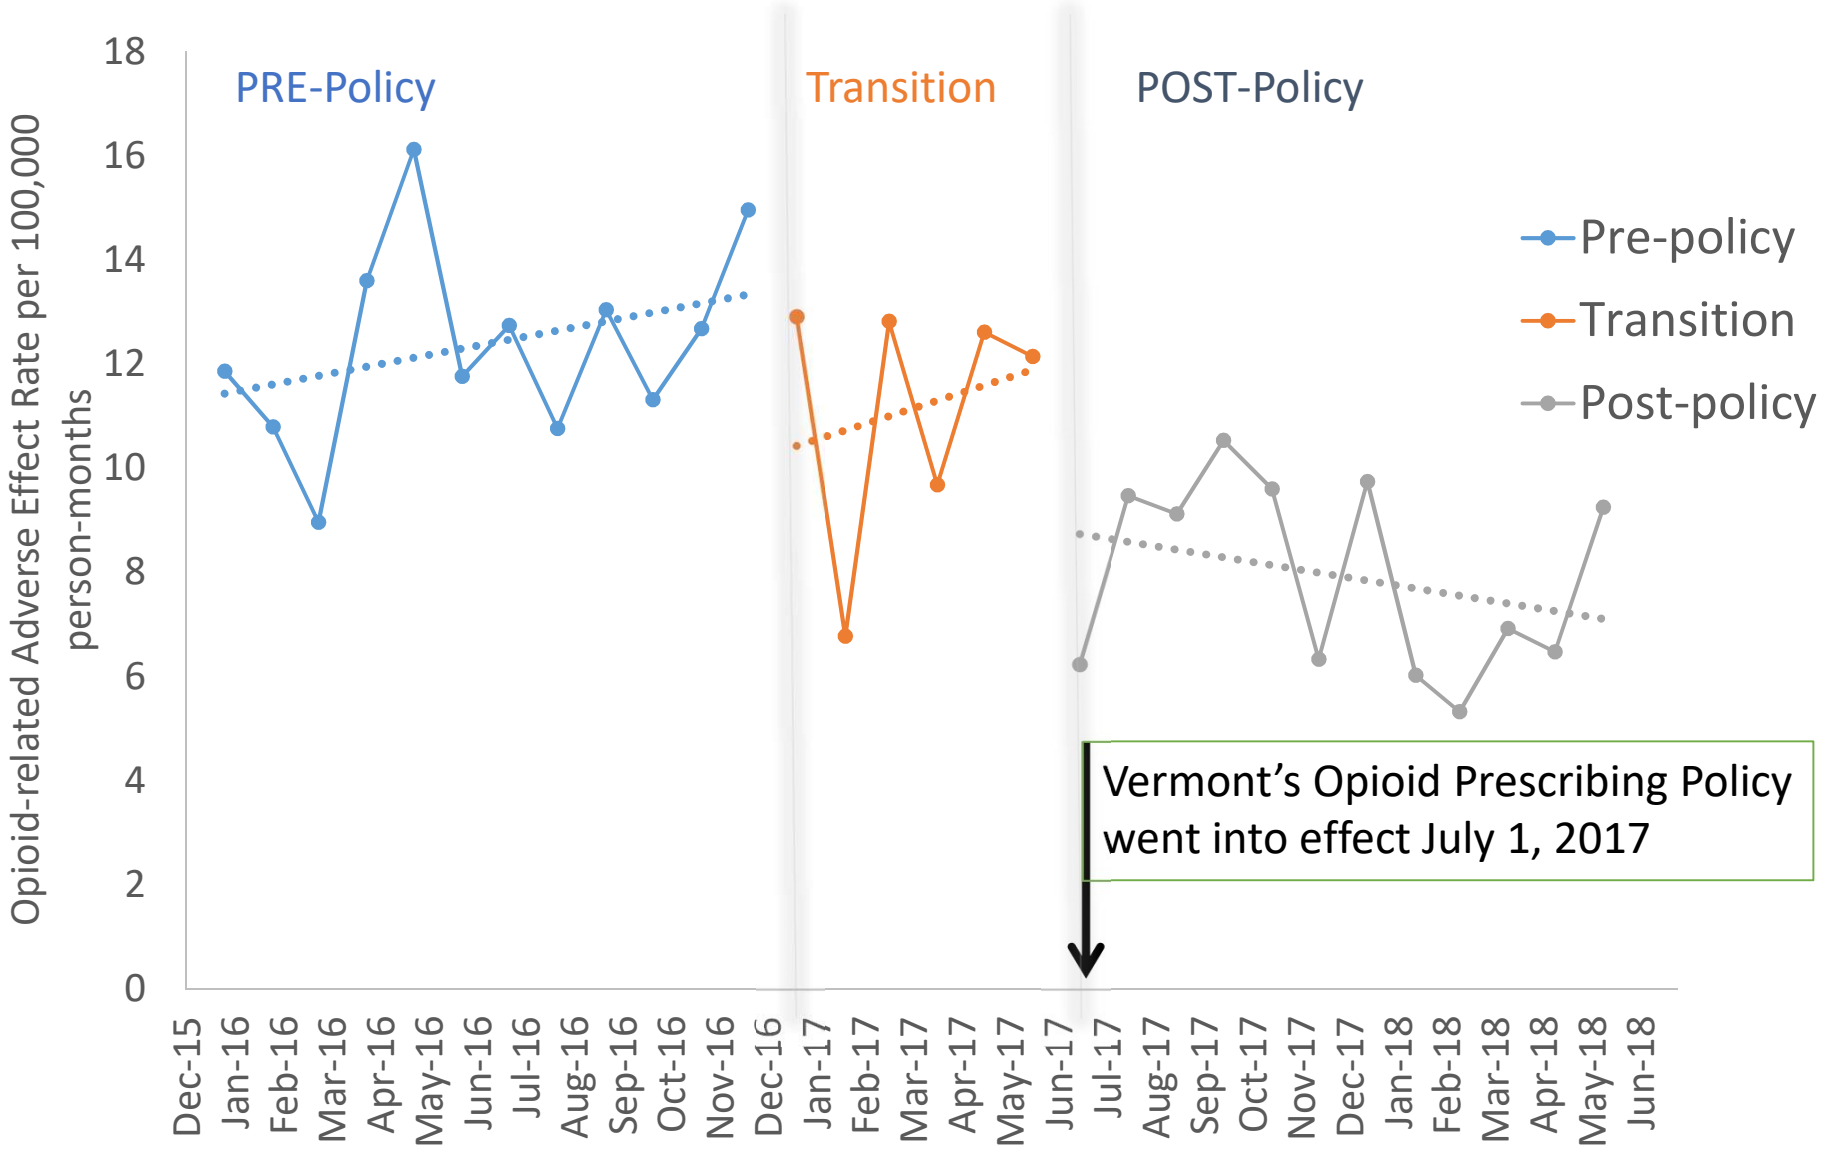
OTHER OPIOID ADVERSE EFFECT	T40.2X5
METHADONE ADVERSE EFFECT	T40.3X5
SYNTHETIC NARCORTICS ADVERSE EFFECT	T40.4X5
UNSPECIFIED NARCOTICS ADVERSE EFFECT	T40.605
OTHER NARCOTICS ADVERSE EFFECT	T40.695

Specific medical problems that are a result of opioid misuse

- Sedation, slow respiration, loss of consciousness, cardiac arrhythmia, altered mental status

Opioid-Related Adverse Effects

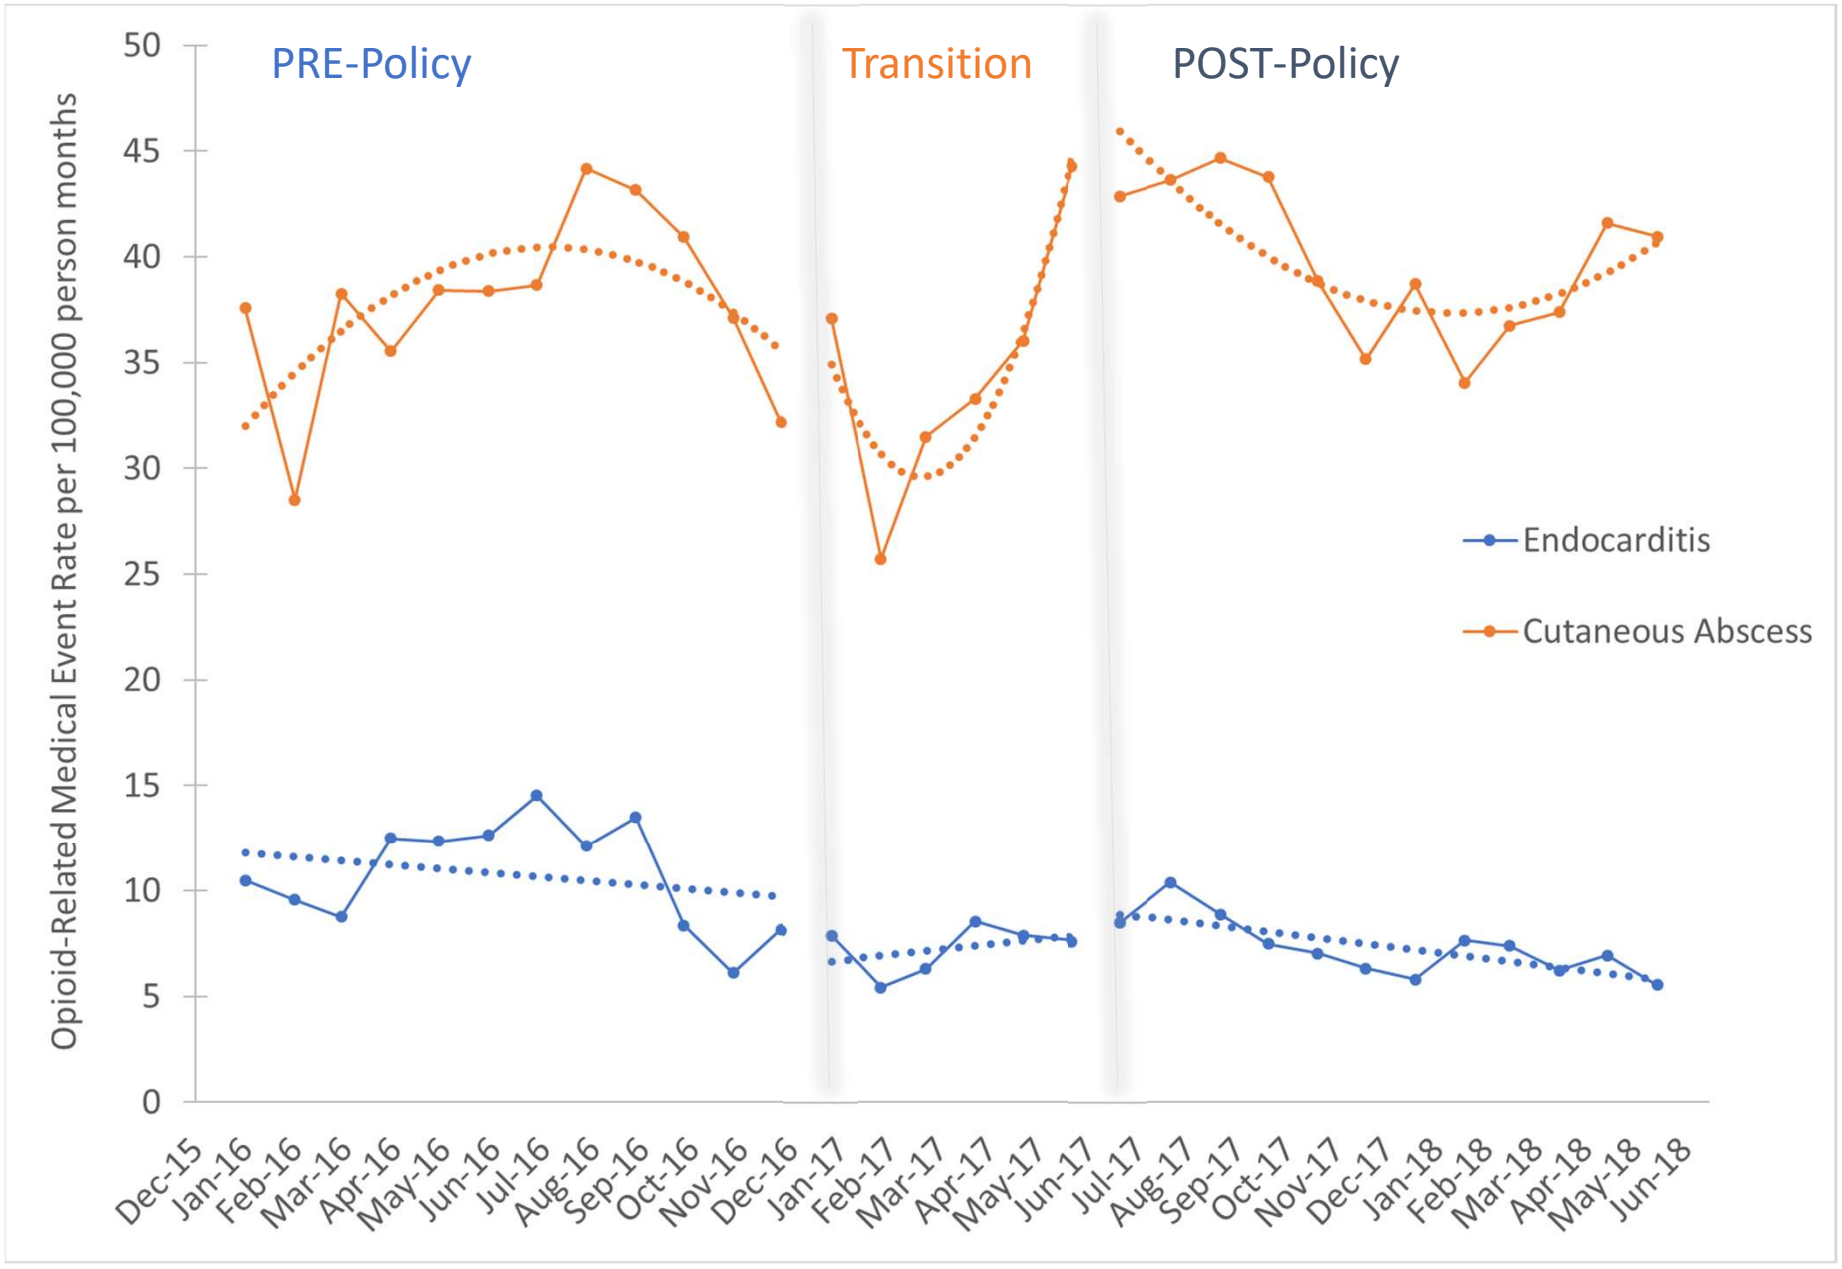


Opioid-Related Medical Events

Specific medical events that may be related to opioid misuse

ANY OTHER OPIOID-RELATED MEDICAL EVENTS
BACTERIAL INFECTION
GANGRENE
SEPTIC ARTHRITIS, ANY LOCATION
CELLULITIS OR LYMPHANGITIS, ANY LOCATIONS
ACUTE OR SUBACUTE OSTEOMYELITIS, ANY LOCATION
ENDOCARDITIS
EPIDURAL ABSCESS
ENDOPHTHALMITIS
CUTANEOUS ABSCESS
OTHER ABSCESS
HIV
HEPATITIS B
HEPATITIS C
LUNG DISEASES DUE TO EXTERNAL AGENTS
RESPIRATORY FAILURE

Medical Event Rates: Opioid related



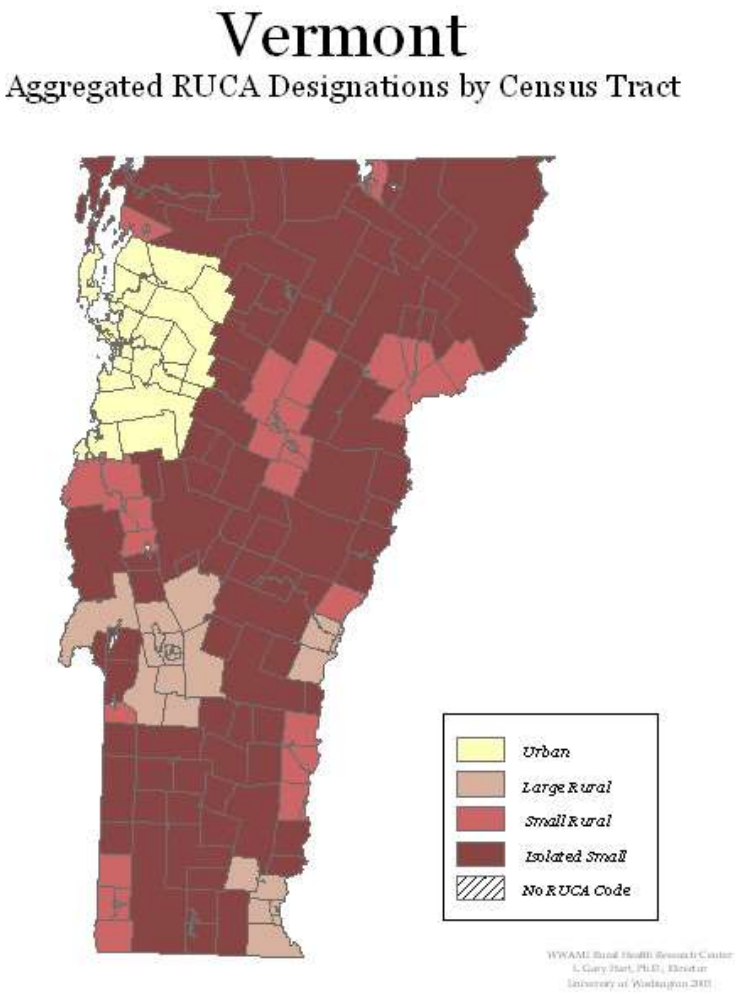
Original Hypotheses

Specific Aim 1: *Measure the impact of opioid prescribing policies on hospital utilization (ED and inpatient) due to opioid overdose, adverse effects, & medical events*

- Hypothesis 1a: Opioid-related hospital utilization rates will decrease after the implementation of prescribing policies.

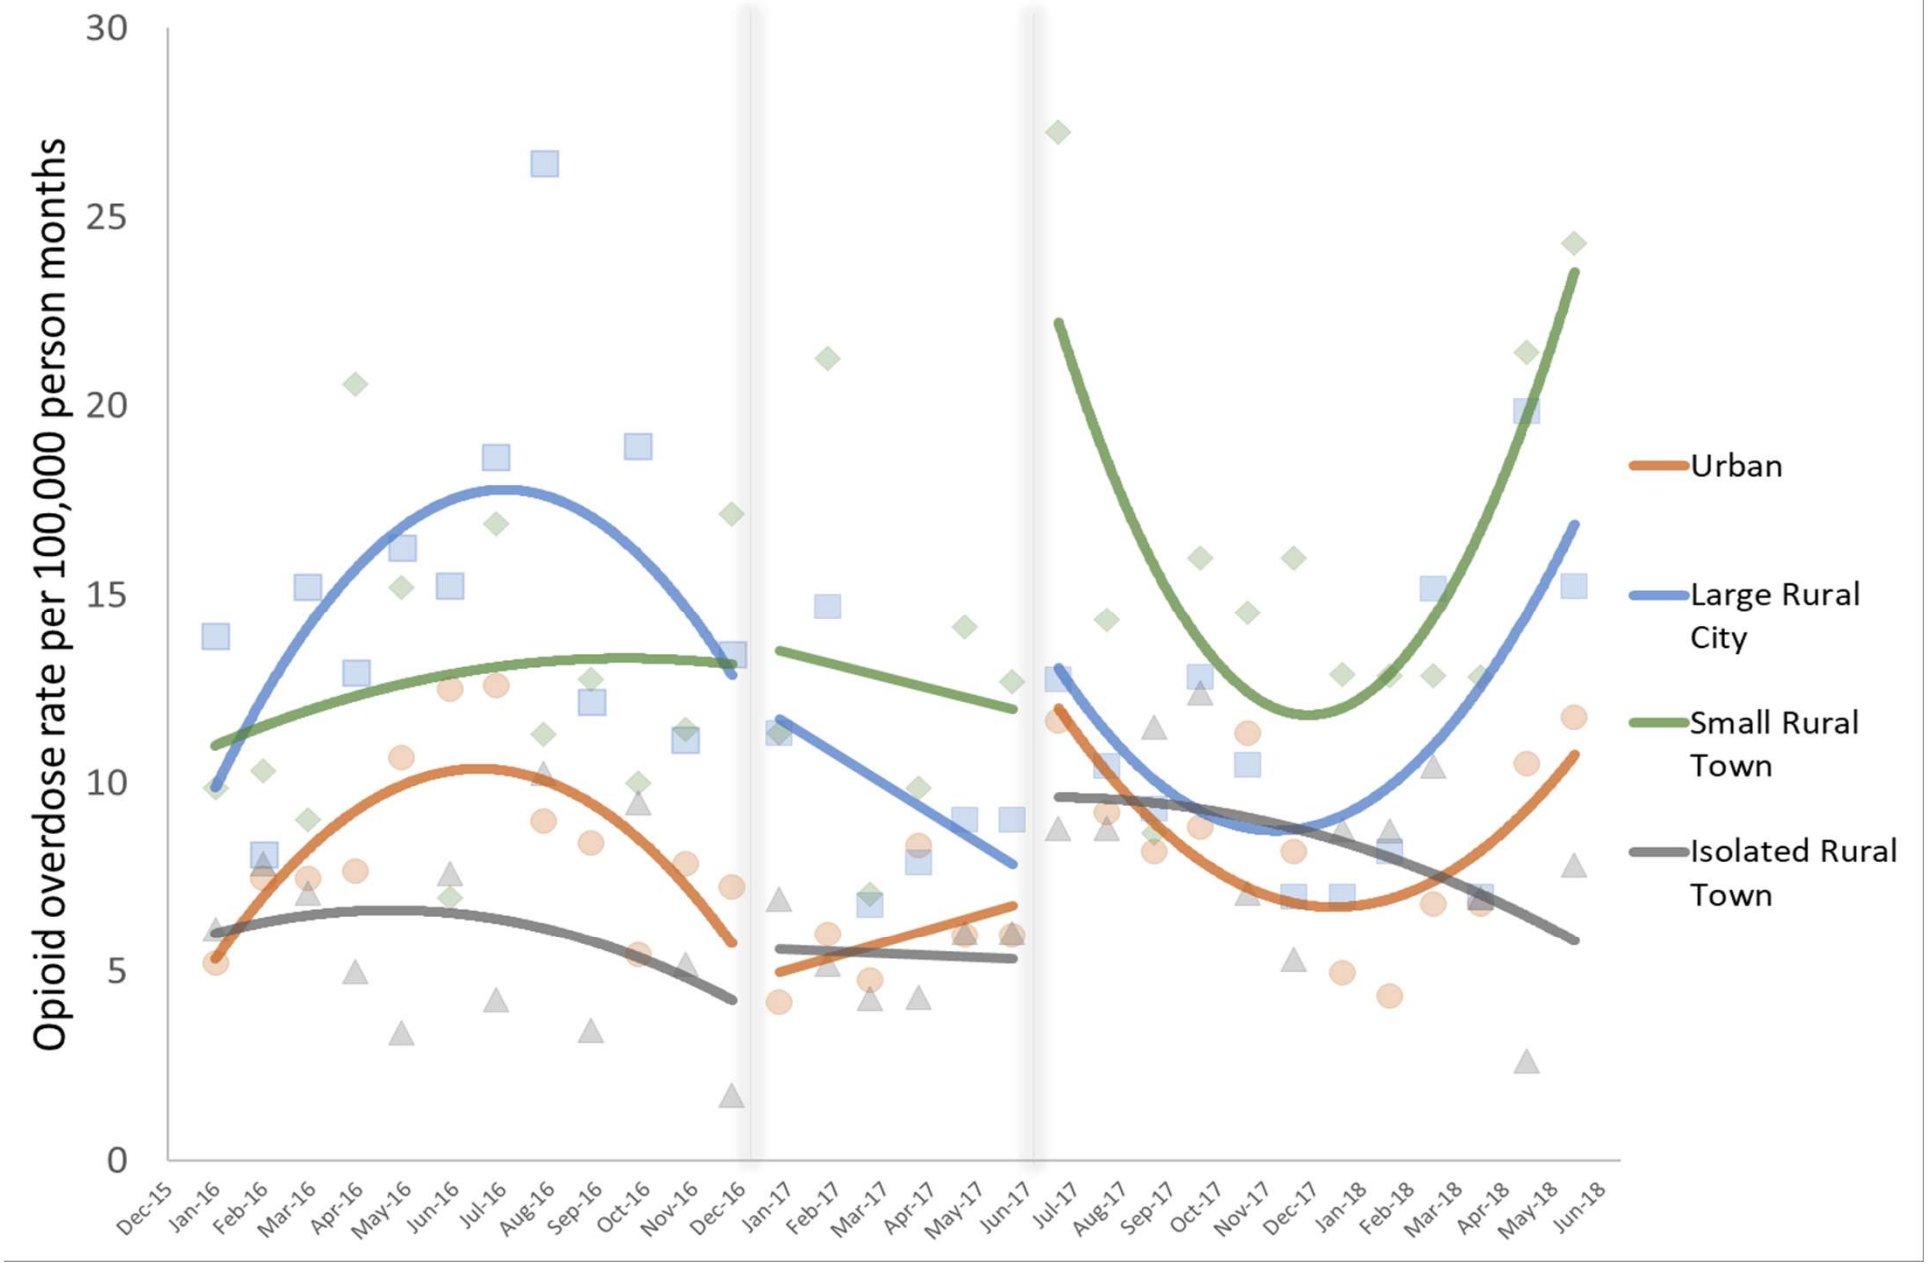
- Hypothesis 1b: Changes in opioid-related hospital utilization rates will be moderated by type of opioid or opiate, age category, and geographic area.

Opioid Overdose Rates by Rurality



Rurality Category	Example Towns
Urban	Burlington, Winooski, Colchester, Essex Junction, Milton, Jericho, Charlotte, Richmond, St. Albans, North Hero, Stowe, Waterbury
Large Rural City	Rutland, Barre, Montpelier, Quechee, White River Junction, Bennington
Small Rural Town	Middlebury, Brattleboro, Castleton, Windsor, Vernon, Franklin
Isolated Rural Town	Ludlow, Woodstock, Randolph, Derby, Norwich, Randolph

Opioid Overdose Rates by Rurality



Opioid Overdose Rates by Age
