

The highly-developed skills and laser-sharp precision of dermatologist and Professor of Medicine **GLENN GOLDMAN, M.D.**, make him a true craftsman in his field. Specially trained in Mohs surgery, a microscopic surgical treatment procedure for skin cancer, he combines a keenly focused accuracy with the detective skills of a pathologist and the restorative eye of a reconstructive surgeon to deliver successful results for his patients. His dedication to excellence fuels his leadership roles both nationally, on the American College of Mohs Surgery Board of Directors, and on campus as director of the Division of Dermatology at the University of Vermont College of Medicine.

I AM AN

ARTIST.

I am a faculty physician.
