## Biomechanical Markers of Post-traumatic Osteoarthritis after Anterior Cruciate Ligament Reconstruction and Meniscal Resection

### What:

We are seeking volunteers to participate in a research study at UVM on changes to the knee joint following ACL reconstruction and meniscus surgery. This is a UVM study to learn about what happens to the knee joint following ACL reconstruction and meniscus surgery that may make people more likely to develop arthritis.

### Who:

Men and women ages 18-39

First injury and surgery to the ACL and meniscus

Able to walk on uneven ground, such as during hiking, or playing recreational sports

No prior diagnosis of arthritis

Weigh less than 250 lb

### Details:

8 visits (30 minutes to 3 hours each)

Flexible scheduling

Compensation: \$550

### For information:

Call 802-656-9890
