

DULCE

Adopting DULCE to Better Serve Vermont Families and their Infants

Developmental Understanding and Legal Collaboration for Everyone

DULCE
An initiative
of CSSP

DULCE is an evidence-based approach that proactively addresses social determinants of health, promotes the healthy development of infants from birth to six months of age, and provides support to their families in the pediatric health care setting

HOW IT WORKS

The DULCE interdisciplinary team meets weekly to identify supports for families

Family Specialists from local Parent Child Centers have advanced training in child development, are members of the local Children's Integrated Services team, and build trusting relationships with families in the pediatric office

The Family Specialist attends well child visits with families, provides screening and referrals, and connects families to services in the early childhood system

DULCE teams include a lawyer who helps children and families get the comprehensive services for which they qualify and improve the functioning of systems for the broader community

DULCE Interdisciplinary Team

MOST PREVALENT NEEDS IDENTIFIED

Economic hardship

Food insecurity

Parental/caregiver depression

DULCE OUTCOMES

Accelerated access to supports

Better completion rates for well-child visits and immunizations

Reduced use of emergency department care

UNIVERSAL APPROACH

The Family Specialist offers DULCE to all families with children 0-6 months of age at the child's medical appointment

The pediatric health care setting provides a unique opportunity to build relationships and connections with all new families as more than 90% of Vermont infants have a well visit in their first weeks of life

Universal approaches, such as DULCE, reduce stigma which results in increased acceptance by families, earlier identification of risk, and accelerated connection to resources

THE IMPACT OF DULCE IN VERMONT

99% of families chose to participate in DULCE

94% of DULCE families were screened for nine health-related social needs

80% of families with identified need connected to resources
