

Firestone Medical Research Building Construction Notice #1

September 30, 2020

Construction of the Firestone Medical Research Building will begin October 5, 2020. The initial focus through mid-November supports enabling work to establish the construction site and position utilities. The three enabling activities with the greatest impact to the LCOM Community are:

1) The installation of a perimeter fence in the Given parking lot to establish the construction site. A majority of the Given parking lot will be converted into a fenced construction site; ADA parking spaces will be available in the northeast section of the lot with limited parking spaces remaining in the southeast section of the lot, near the water tower (see Figure A below). Displaced parking spaces will transition to the Jeffords West parking lot (see Figure B below).

2) The loss of the HSRF loading dock. Vendors are being notified to re-route use to the Given or Jeffords loading docks. The dumpster and biowaste shed located on the HSRF loading dock will be removed; revised biowaste disposal procedures will be provided shortly, and dumpster needs will be serviced via the Given or Jeffords loading dock.

3) The re-routing of level 2 south access/egress point to HSRF. Initial re-routing in the southern portion of HSRF is limited to the level 2 access/egress point. Access/egress from the HSRF 2 entrance/exit will be re-routed to the HSRF 1 western entrance/exit or via the HSRF-Stafford skyway. As construction progresses, access/egress to the HSRF southern stairway will require modification; additional information will be shared before this occurs.
