Plasma Donations from Recovered COVID-19 Patients

In coordination with the U.S. Food and Drug Administration (FDA), the Red Cross is seeking people who are fully recovered from the new coronavirus to [sign up to donate plasma](#) to help current COVID-19 patients.

People who have fully recovered from COVID-19 have antibodies in their plasma that can attack the virus. This convalescent plasma is being evaluated as treatment for patients with serious or immediately life-threatening COVID-19 infections, or those judged by a healthcare provider to be at high risk of progression to severe or life-threatening disease.

You may qualify to donate plasma for coronavirus patients if you meet specific convalescent plasma and regular blood donation eligibility requirements:

You are at least 17 years old and weigh 110 lbs. Additional weight requirements apply for donors age 18 or younger.

In good health. You generally feel well, even if you're being treated for a chronic condition. [View blood donation FAQ's.](#)

Have a prior, verified diagnosis of COVID-19, but are now symptom free and fully recovered from COVID-19.

If you're fully recovered from a new coronavirus infection and meet the above criteria, please fill out the [Donor Eligibility Form below](#). A Red Cross representative will follow up with prospective candidates to confirm eligibility.

Faculty Support: Resources

- The Department of Psychological Services will be standing down their daily Zoom drop-in sessions. However, if you or your teams need assistance with debriefing or processing of this crisis, Dr. Marlene Maron and her team of psychologists are available to run local, small sessions, to help your teams get through.
- Dr Amit Sood (Mayo Clinic) morning gratitude practice (only 3 minutes)
